1H FY2019 Half Year Results Presentation to 31 March 2019

31 May 2019

Disclaimer & Basis of Preparation

This presentation is provided for information purposes only and has been prepared using information provided by the company. The information contained in this presentation is not intended to be relied upon as advice to investors and does not take into account the investment objectives, financial situation or needs of any particular investor. Investors should consider their own individual investment and financial circumstances in relation to any investment decision.

Certain statements contained in this presentation may constitute forward-looking statements or statements about future matters that are based upon information known and assumptions made as of the date of this presentation. These statements are subject to risks and uncertainties. Actual results may differ materially from any future results or performance expressed, predicted or implied by the statements contained in this presentation.

The Select Harvests Limited financial statements are prepared in accordance with Australian Accounting Standards, other authoritative pronouncements of the Australian Accounting Standards Board, Urgent Issues Group Interpretations and the Corporations Act 2001. This includes application of AASB 141 Agriculture in accounting for the current year almond crop, which is classified as a biological asset. In applying this standard to determine the value of the current year crop, the Company makes various assumptions at the balance date as the selling price of the crop can only be estimated and the actual crop yield will not be known until it is completely processed and sold. The resulting accounting estimates will, by definition, seldom equal the related actual results, and have a risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year.

<i>Net Debt/Equity</i>	<i>18.1%</i>	<i>23.8%</i>
<i>Annualised ROCE</i>	<i>7.4%</i>	<i>12.4%</i>

- Increased current assets – working capital of \$160.3m is higher due to value of 2019 unsold crop (inventory) – higher volume
- Increased non-current assets due to ongoing investment in the development of immature orchards
- Net debt including finance leases \$93.4m (1H FY2018* \$69.0m) – higher debt level due to investment in non-bearing acres and large 2019 crop. This will unwind in 2nd half as crop is sold.
- Gearing (net debt/equity) is 23.8% (1H FY2018 18.1%)
- Return On Capital Employed (ROCE) improved as orchards mature and start yielding and improved efficiency

Balance sheet is strong – debt is at seasonal peak – substantial debt reduction will occur over 2H FY2019

Dividends paid	(5.3)
Net (Decrease)/Increase in Cash/Cash Equivalents	(5.3)

- Improved EBITDA¹ of \$38.5m - operational performance
- Negative operating cashflow due to seasonal timing:
 - First half cash outflows to grow 2019 crop (shown through increase in inventories)
 - Second half cash inflows will occur through sale of 2019 crop
 - Working capital also impacted by Food Division Easter inventory increase
- 1H FY2019 Investing cash flows of \$14.7m driven by:
 - Tree & Orchard Development \$8.8m
 - Property Plant & Equipment \$7.8m
 - Water Rights \$0.3m
 - Grant Income (\$2.2m)

Large investment in 2019 crop inventory will deliver substantial operating cashflow in 2H FY2019

Note:

Biennial Nature of Crop

- The almond crop is biannual in nature with +/- 10% per annum variation in tonnage possible

Variation between Regions and Farms

- Yields are not uniform and vary across both farms and growing regions

Post Economic Maturity Yield

- The yield for post economic maturity farms deteriorates as tree age increases

Significant tonnage upside available with a higher yield per acre at maturity

Tree Nut Pricing

Almonds are currently the best value in the basket - driving consumption

SELECT HARVESTS

Growing Costs

2019 vs 2018 Crop Costs Per Kg

- Overall 2019 Crop costs per Kg have reduced by 8.6%
- Yield delivery remains the top priority
- Focus continues from 2018 reductions across all Horticultural expenditure categories
- New technology in the processing centre has increased throughput rates – lower processing costs
- Higher temporary water prices led to a 33.6% increase in the water cost per kg. Management of temporary market purchase decisions and ownership portfolio kept this increase to a minimum
- Further reduction targeted through use of technology

Improved efficiency and increased yields led to further reductions in production cost per kg
