Strategy Rationale

- Dart's has three explicit exploration and development strategies - Lithium, Gold, and Porphyries. Each is consistent and complimentary to our broad view that specifically they are positioned in line with positive long-term demand trends.
- We continue to be positively disposed towards the price of US\$ Gold as Central Banks move to increase foreign exchange reserves with gold as a part of a diversified mix of holdings.
- Potential further weakness in the USD/AUD exchange rate will occur and that A\$ Gold producer margins will expand beyond already wide margins in the medium and long-term.

ASX:DTM

Strategy Rationale

- Dart believes that Lithium prices (minus 30% over 12 months) will recover sharply over the next three years as increased demand from battery manufacturers squeezes supply. Mine development has been halted by many would be producers
- Porphyry style mineral deposits are becoming more significant as a source of supply to meet the worlds increasing demand for metals.
- Increased exploration activity and tenement acquisition has been particularly noticeable along the Lachlan Fold Belt of NSW extending into Victoria
