ASX Release

LumiGrow Grow Lighting Technology chosen by Three Australian Universities

Since May this year, when Enevis Limited (ASX: ENE) announced its exclusive distribution agreement with US company LumiGrow, three Australian universities have selected LumiGrow LED grow lighting solutions for their academic and research greenhouse facilities.

Most recently, the School of Biological Sciences at Flinders University in South Australia has placed an order for LED lighting fixtures for each of its five greenhouses, all using the LumiGrow Toplight with the smartPAR wireless lighting control system.

Similarly, the University of Tasmania has placed an order for LumiGrow LED lighting for its research laboratories, while the University of Southern Queensland is currently using the technology in a controlled environment for research purposes and has also ordered additional fixtures.

LumiGrow lighting solutions are the most sophisticated in the global marketplace and come with a full suite of supporting technologies. Beyond traditional lighting, the company was the first to introduce wireless smart lighting to the greenhouse and vertical cannabis markets, as well as integrated light sensors, disease recognition sensors, and enterprise lighting management software.

Executive Chairman and Managing Director, Mr Peter Jinks, said "The fact that our academic and research institutions are using the LumiGrow technology is evidence of its technical excellence.

"These projects have also validated our business model which offers the clients an integrated approach to the design, installation and ongoing operations and maintenance of the lighting solutions through each of the three discrete business units within Enevis."

Further confirmation of the superiority of the LumiGrow grow lighting solutions came in November this year with the award of Best Lighting Solution at the 2019 Canadian Cannabis Awards, as judged by an expert panel. The smart lighting solution is designed for exceptional crop growth, maximum profits and custom crop traits. The award was given for product excellence and proven performance in the Cannabis industry.
