

ASX Announcement

13 July 2020

Elsight's Halo receives the American FCC certificate after a chain of successful POC's

Highlights

- In the interest of penetrating the US and other markets, after extensive lab results, Elsight has secured an FCC SDoC certification which is mandatory for operation in the US.
- This FCC SDoC certification is necessary in order to import Halo to the US and start extensive sales, deployment and operation in this market.
- Elsight is in the process of receiving additional certifications including CE Mark (EU market), certification by number of US operators, and three privacy certifications including HIPPA, GDPR and CCPA which are required by medical customers.

13 July 2020 – Elsight Limited (ASX: ELS) ('Elsight Ltd, 'Elsight' or 'the Company'), an ASX-listed company that develops advanced communication technologies for real-time data, video, and audio transmission over cellular networks in mission-critical environments, is pleased to announce that after concluding the required lab tests, it has received FCC SDoC certification for the Halo communication platform.

After identifying a major need for better connectivity in the US, as well as new market segments in which the company's technology can be utilised, Elsight began to amplify business development efforts within the US. While FCC certification was pending, Elsight successfully completed a number of POC's within various markets (drone, medical and others). With the FCC SDoC certification in place, the company is now ready to move forward with sales and deployment in this strategic market.

The FCC label or the FCC mark appears on electronic products manufactured or sold in the United States that certifies that the electromagnetic interference from the device is under limits approved by the Federal Communications Commission. Securing this certification was imperative for the mass distribution of Halo on a large scale in the US. This certification coupled with the success of POC's means that the company can sign commercial agreements with US customers.

Elsight is in the final stages of the application process for additional certifications including, certification by leading American cellular operators; CE Mark – which indicates conformity with health, safety, and environmental protection standards for products sold within the European Economic Area; as well as privacy certifications including HIPPA, GDPR and CCPA for Halo.

Authorised for release by the Board of Directors of Elsight Limited.

About Elsieht

Elsieht (www.elsieht.com) is a solution provider of ground-breaking hybrid video and data transport services (on-the-move or fixed) for large Safe-City projects, sensitive facilities management, and surveillance and protective activities. The platform supports data and video capturing, recording, and highly secured transmission against data and video interception and hacking. **Elsieht's** platform was designed to address the most demanding requirements of Special Forces across enemy lines and sophisticated intelligence organisations. These systems underwent the most rigorous testing in combat situations as well as extensive testing by the most demanding laboratories. As a result, they present an unmatched level of reliability, lowest latency, and highest adaptive bandwidth over cellular networks that enables HD and 4K TV transmission quality, with "never-fail" redundancy and much more. For the first time they offer strict military requirements for civil usage. **Elsieht's** customers range from defence and homeland security to industrial security, broadcasting, first responders and healthcare.
