ASX ANNOUNCEMENT

Senetas subsidiary, Votiro, Announces Strategic Partnership with Thales
Thales to distribute Votiro's Secure File Gateway product line as new offering; enabling government agencies to provide efficient digital services with no risk of malware penetration

Senetas Corporation Ltd (ASX: SEN) (Senetas), today announces that its subsidiary Votiro, a global leader in positive selection technology(™), has entered into a partnership and distribution agreement with Thales. Thales will offer proven solutions from Votiro's Secure File Gateway product line—including Email and Web Applications, designed to protect government agencies in North America from all file-borne threats. The Secure file Gateway product line offers threat-free content, such as documents and attachments, flowing into government agencies' networks without interrupting data flow or hindering work activity.

Thales and Votiro will leverage their strategic relationship to enable government agencies—in North America—to provide efficient digital services with no risk of malware penetration using the Votiro Secure File Gateway product line. Votiro's solutions have been adopted by governments worldwide to neutralize file-borne threats and protect external-facing applications. Thales' distribution of Votiro's Secure File Gateway for Email protects against some of the most common targets for malicious attacks, including banking scams, spear phishing, zero-day, and ransomware. Secure File Gateway for Web Applications advances security measures and capabilities for applications.

"Votiro's Secure File Gateway product line has long been adopted and trusted by governments around the world, and now our new partnership with Thales will allow more federal government agencies in the U.S. the opportunity to access solutions at a time when security is paramount," said CEO and founder of Votiro, Aviv Grafi. "We look forward to expanding our footprint in North America and growing our partnership with Thales, who have made it their mission to provide innovative solutions to protect the most vital data, from the core to the cloud to the field for defense, intelligence, and civilian agencies across the U.S. Federal Government."

"Partnering with Votiro and distributing the Secure File Gateway product line will help government agencies streamline operations by securing the overwhelming amount of incoming data that governments must process," said Kirk Spring, President of Thales Trusted Cyber Technologies. "Utilizing this solution is one step governments can take to work towards a primary goal—to ensure the well-being of their people through leveraging technology to improve everyday services."

As more governments around the world embrace technology to boost efficiency and digitize bureaucratic processes, the benefits of a partnership between Votiro and Thales become more apparent. Government agencies embracing digital transformation grant access to more external functions, while also creating more breach points into the organization. Unchecked, this digital growth can correlate with an increased risk of cyberattack, particularly among government targets who find themselves exposed to the most sophisticated types of document-borne attacks. Thales and Votiro's partnership will allow government agencies to continue to focus on innovation—rather than security breaches.

ABOUT SENETAS CORPORATION LIMITED
Senetas is an Australian listed public company (ASX:SEN) and a leading developer of high-performance encryption security solutions. From certified high-assurance hardware and virtualised encryption for data networks, to the most secure file-sharing collaboration application providing data sovereignty control; all are based on the Senetas crypto-agile, quantum-ready platform.

Senetas security solutions are trusted to protect business enterprises, governments, defence, technology service providers and critical national infrastructure against data breaches and cyber-attacks. Leveraging end-to-end encryption and state-of-the-art key management, they provide long-term data protection without compromising network and application performance, or user experience.

➢ **CN Series** Hardware Encryption: Certified, high-assurance and network independent encryption for core network and IT infrastructure.

Certified by leading independent authorities (Common Criteria, FIPS and NATO), CN Series high-performance encryptors provide maximum data protection and security for public and private networks. Their designed-in agility protects mixed network types and topologies. Operating from ultra-fast 100Gbps to modest 10Mbps bandwidths, they feature near-zero latency and overheads.

➢ **CV Series** Virtualised Encryption: Scalable, flexible and crypto-agile encryption for virtual customer premises equipment and wide area networks.

Scalable to hundreds of endpoints, the CV Series is a software version of the trusted Senetas encryption platform. Network independent, it delivers concurrent, policy-based multi-Layer encryption at up to 5Gbps. It is ideally suited to cloud, distributed and software-defined networks. The CV Series enables flexible licence based deployment to ensure data protection to the network virtual edge.

➢ **SureDrop** Encrypted File-Sharing Collaboration: The secure file-sharing collaboration application with 100% data sovereignty control and more.

SureDrop has the usability of box-type file sharing and other collaboration tools, with the added benefits of end-to-end encryption security and 100% sovereign data location control. It may be deployed as an on-premises or service provider SaaS solution. SureDrop is also available with

Votiro Disarmer; the award-winning file content sanitisation tool. It protects against all types of malicious content, malware and zero-day attacks.

Senetas encryption solutions have been trusted to protect much of the world's most sensitive information for more than 20 years. They are used to protect everything from government and defence secrets to intellectual property, financial transactions, citizen privacy to real-time CCTV networks and infrastructure SCADA control systems.

Senetas encryption solutions are used in more than 40 countries. They are distributed and supported internationally by Thales, and in Australia and New Zealand by Senetas and its partner community.

About Votiro

Votiro is an award-winning cybersecurity company with a mission of securing organizations from all file-borne threats . Its proprietary, award-winning positive selection technology allows users to safely open email attachments, download and transfer files, share content, while keeping performance and functionality intact. With over 400 customers globally, Votiro has offices in US, Singapore, Australia, and Israel. Votiro is a Gartner Cool Vendor award winner and certified by the international standard of Common Criteria for Information Technology Security Evaluation (ISO/IEC 15408). Votiro has also been recently recognized as Best CDR Provider by the 2020 Cybersecurity Excellence Awards and named a Bronze winner in the Hot Security Technology Category by the 2020 Infosecurity Products Guide Awards.

About Thales TCT

Thales Trusted Cyber Technologies (TCT) is a U.S. based provider of government high-assurance data security solutions. Our mission is to provide innovative solutions to protect the most vital data from the core to the cloud to the field for defense, intelligence, and civilian agencies across the U.S. Federal Government. With a concentration on Federal and other U.S. government agency requirements, Thales TCT is better able to serve its government customers while also investing in the development of future technologies to secure the Federal Government's most sensitive information. The company's core values are centered around character, empowerment, courage, drive, and innovation. Thales TCT is owned by Thales.
