

## Appendix 3Y - Replacement

**9 March 2021:** Environmental Clean Technologies Limited (ASX: ECT) (ECT or Company) advises that the attached Appendix 3Y – Change in Director’s Interest Notice replaces the notice for Mr Ashley Moore lodged with the ASX on 5 March 2021.

The previously lodged Appendix 3Y inadvertently included incorrect details with regard to:

- the date of the last notice
- the number of fully paid ordinary shares held by Mr Moore prior to the change
- a transfer of shares between indirect holdings

A corrected Appendix 3Y for Mr Moore is attached.

#### About ECT

ECT is in the business of commercialising leading-edge energy and resource technologies, which are capable of delivering financial and environmental benefits.

We are focused on advancing a portfolio of technologies, which have significant market potential globally.

ECT’s business plan is to pragmatically commercialise these technologies and secure sustainable, profitable income streams through licensing and other commercial mechanisms.

#### About Coldry

Coldry is the gateway enabler of higher-value applications for low rank coals.

Low rank coals are a rich source of valuable hydrocarbons but suffer from high moisture content that must be reduced to enable higher-value upgrading and conversion to solid fuels, liquid or gaseous hydrocarbons.

Drying is easy. However, drying efficiently and cost effectively has been the challenge. Coldry meets this challenge through a combination of ‘brown coal densification’ and waste heat utilisation, delivering the world’s first low temperature, low pressure, low cost, zero CO<sub>2</sub> emissions drying process.

#### About HydroMOR

The HydroMOR process has the potential to revolutionise primary iron making.

HydroMOR is a simple, low cost, low emission, hydrogen-driven technology which enables the use of ‘low value’ feedstocks to produce primary iron.

#### About COHgen

The COHgen process has the potential to deliver a lower cost, lower emission method for hydrogen production from brown coal.

COHgen is currently advancing through fundamental laboratory development intended to form the basis for a patent application ahead of scale up and commercialisation.

#### About CDP-WTE

The catalytic depolymerisation-based waste-to-energy process converts ‘low-value’ resources into higher-value diesel and other valuable by-products.

CDP-WTE can be deployed as a standalone solution or integrated with the Coldry process to deliver higher-value, lower-emission energy solutions to lignite resource owners.
