

INVESTOR WEBINAR PRESENTATION

SensOre announces its participation in the ShareCafe Small Cap “Hidden Gems” Webinar, to be held Friday, 22 April 2022 from 12:30pm AEST / 10:30am AWST.

Chief Executive Officer Richard Taylor will provide an overview of SensOre’s artificial intelligence (AI) and machine learning (ML) technologies which SensOre utilises to predict resource endowments and generate targets for further discovery.

This webinar is able to be viewed live via Zoom and will provide viewers the opportunity to hear from, and engage with, a range of ASX-listed leading micro/mid cap companies.

To access further details of the event and to register at no cost, please copy and paste the following link into your internet browser:

https://us02web.zoom.us/webinar/register/6316497401690/WN_ge0HdmUPTCyGfSSuNkTO9g

A recorded copy of the webinar will be made available following the event.

A copy of SensOre’s current investor presentation to be delivered during the webinar was released on the ASX platform on 29 March 2022.

This announcement was approved and authorised for release by the Chief Executive Officer of SensOre.

ABOUT SENSORE

SensOre Ltd. (**SensOre** or the **Company**) (ASX: S3N) aims to become the top performing minerals targeting company in the world through the deployment of artificial intelligence (AI) and machine learning (ML) technologies, specifically its Discriminant Predictive Targeting® (DPT®) workflow. SensOre collects all available geological information in a terrane and places it in a multidimensional hypercube or data cube. SensOre’s big data approach allows DPT predictive analytics to accurately predict known endowment and generate targets for further discovery.

The SensOre Group has built a tenement portfolio of highly prospective, wholly-owned and joint ventured technology metals tenement packages located in Western Australia. As the capacity of SensOre’s AI technologies expand to new terranes and a broader range of commodities, the Company anticipates that new targets will be identified and acquired in Australia and internationally.

SensOre’s DPT technology has been developed over many years and involves the application of new computer assisted statistical approaches and ML techniques across the workflow of mineral exploration. The workflow includes data acquisition, data processing, ML training, ML prediction and analysis through DPT. SensOre has acquired numerous data sets and used these to generate mineral system targets. Targets have been analysed and vetted by SensOre’s experienced exploration geoscientists. Publicly available data in the form of geophysics, surface geochemical, drilling and geological layers and derivatives have been compiled into a massive data cube covering much of Western Australia. SensOre believes that the combination of big data and ML techniques will provide the next generation of exploration discovery.
