## **ASX Announcement Tritium Delivery Update**

On the 9th of February, Rectifier Technologies Limited (Company) announced the receipt of product purchased orders of 35kW high-voltage and high-efficiency modular power supply units from Tritium Pty Ltd that were scheduled to be delivered before the end of the 2022 (calendar year). Whilst part of the order has been fulfilled, the entirety of the order is now scheduled to be delivered before the end of 2023 (calendar year). This is due to electronic component and material shortages which remain a global problem. There are signs however that are indicative of improvements in material availability, and we are hopeful that this issue stabilises soon.
