

7 June 2023

Incident at Geelong Refinery

Viva Energy Group Limited (the **Company**) advises that a contractor crane failure occurred at Geelong Refinery on Tuesday afternoon, causing a compressor to be dropped to the ground. The area was subject to an exclusion zone at the time and no one was injured.

WorkSafe has been notified and Viva Energy has launched an investigation into the cause of the incident. The compressor was being installed as part of the major maintenance turnaround currently underway at the Refinery.

The extent of the damage to the compressor is yet to be determined. It is currently anticipated that repairs will take approximately three months to complete, subject to a detailed assessment which is yet to commence. During this period the Company anticipates a Refining EBITDA (RC) loss in the range of A\$25 million to A\$35 million per month (including in June) due to production and margin impacts. The Company has insurance coverage for property damage and business interruption, which we expect will materially reduce the extent of this anticipated financial impact. The maintenance turnaround is expected to conclude by the end of June, at which time unaffected units will be available to restart.

We do not expect supply to the market to be disrupted as a result of the incident.

More information will be provided once assessment of the damage and repair options are completed.
