

ASX Announcement

Imugene PD1-Vaxx patent extended to 2040

Sydney, Australia, 29 June 2023: Imugene Limited (ASX: IMU), a clinical stage immuno-oncology company, is pleased to announce the grant of a new patent (number 11,684,929) by the United States Patent Office. The granted claims protect Imugene's immunotherapeutic PD1-Vaxx, a first-in-class programmed death-1 (PD1) vaccine, currently in clinical development for non-small cell lung cancer (NSCLC).

The patent titled "HUMAN PD1 PEPTIDE VACCINES AND USES THEREOF" will expire on 11 February 2040 (including 685 days of patent term adjustment added to the original expiry date of 28 March 2038) and protects the composition of matter and method of treatment in cancer of Imugene's PD1-Vaxx for the generation of a therapeutic antibody response against the PD1 checkpoint target.

Imugene's PD1-Vaxx is a B-cell activating immunotherapy designed to treat tumours such as lung cancer by interfering with PD-1/PD-L1 binding and interaction. It produces an anti-cancer effect similar to Tecentriq®, Keytruda®, Opdivo® and the other immune checkpoint inhibitor monoclonal antibodies that are transforming the treatment of a range of cancers.

Imugene MD & CEO Leslie Chong said: "With the US being the largest healthcare market in the world, this is a particularly important patent extension to protect our PD1-Vaxx technology as we continue its development."

About Imugene (ASX:IMU)

Imugene is a clinical stage immuno-oncology company developing a range of new and novel immunotherapies that seek to activate the immune system of cancer patients to treat and eradicate tumours. Our unique platform technologies seek to harness the body's immune system against tumours, potentially achieving a similar or greater effect than synthetically manufactured monoclonal antibody and other immunotherapies. Our product pipeline includes multiple immunotherapy B-cell vaccine candidates and an oncolytic virotherapy (CF33) aimed at treating a variety of cancers in combination with standard of care drugs and emerging immunotherapies such as CAR T's for solid tumours. We are supported by a leading team of international cancer experts with extensive experience in developing new cancer therapies with many approved for sale and marketing for global markets.

Our vision is to help transform and improve the treatment of cancer and the lives of the millions of patients who need effective treatments. This vision is backed by a growing body of clinical evidence and peer-reviewed research. Imugene is well funded and resourced, to deliver on its commercial and clinical milestones. Together with leading specialists and medical professionals, we believe Imugene's immuno-oncology therapies will become foundation treatments for cancer. Our goal is to ensure that Imugene and its shareholders are at the forefront of this rapidly growing global market.
