

REPORT ON ACTIVITIES & APPENDIX 5B FOR THE QUARTER ENDED 31 AUGUST 2023

29 September 2023

Melbourne, Australia — Southern Cross Gold Ltd (“SXG” or the “Company”) (ASX: SXG) is pleased to report on its activities for the quarter ended 31 August 2023.

HIGHLIGHTS

Sunday Creek Project

- **Sunday Creek continues to demonstrate globally significant hit rates, cumulatively the project now contains:**
 - 20 individual intersections exceed 100 AuEq g/t x m
 - 34 individual intersections exceed 50 AuEq g/t x m
- **19,626 m drilled in the calendar year to the end of the quarter. An additional 26,000 m planned to be drilled by April 2024**
- **The Company's drilling plan has three clear objectives that will have the largest emphasis over the next six months:**
 - a) **Demonstrate Grade.** Add and connect the existing high-grade zones in and around Rising Sun (SDDSC046: 21.5 m @ 15.0 g/t AuEq incl. 2.1 m @ 121.6 g/t AuEq) and Apollo (SDDSC066: 10.4 m @ 22.4 g/t AuEq incl. 1.0 m @ 224.3 g/t AuEq).
 - b) **Demonstrate Volume.** Along strike and down-dip by step-out drilling to add to the existing mineral endowment. To date our focus area has been a 1,000 m strike to 1,000 m depth, of which we have only tested less 50%. All mineralised occurrences at Apollo, Rising Sun, Golden Dyke and Christina are all open down dip and along strike.
 - c) **Demonstrate Scale.** Exploration at Sunday Creek has district-scale potential. There is an 11 km mineralized trend extending beyond the initial target drill area, defined by historic workings and soil sampling. This large footprint is being drill tested for the very first time at the Tostal, Consols and Leviathan prospects. Twelve holes for 2,383 m have now been completed within the regional area between 3,500 m to 7,500 m along strike from the core drill area. Results from the program will soon be available and released imminently.
- **Subsequent to the end of the quarter, the Company released SDDSC077B (404.4 m @ 5.6 g/t AuEq (5.1 g/t Au, 0.3% Sb) from 374.0 m (uncut)) that was designed to demonstrate continuity of mineralised structures between 25 m to 65 m spacing around hole SDDSC050 (305 m @ 2.4 g/t AuEq traversing through thirteen high grade veins, reported 20 November 2022) at Rising Sun. SDDSC077B (cumulative 2,272 AuEq g/t x m) exceeded SDDSC050 (cumulative 852 AuEq g/t x m), the previous best hole, by almost three times.**

HIGHLIGHTS continued.....

- SDDSC077B hole intersected 13 zones of mineralisation from 375 m to 787 m down hole depth with visible gold noted in 28 individual restricted zones. SDDSC050 also traversed across the same 13 vein structures intersected in SDDSC077B with between 25 m to 60 m distance separating the two holes.
- SDDSC077B drilled parallel to the host breccia dyke but at a high angle to the predominant NW high-grade mineralisation trend, and therefore, the true thickness of the mineralised interval is interpreted to be approximately 60% to 70% of the sampled thickness.
- Cumulatively the hole recorded a 2,272 g/t AuEq x m intersection. Seven intervals had >100 g/t Au (up to 2,679.8 g/t Au), 20 intervals had >15 g/t Au and 20 intervals had >5% Sb (up to 55.8% Sb). Uncut, the hole graded 404.4 m @ 5.6 g/t AuEq (5.1 g/t Au, 0.3 %Sb) from 374.0 m.
- Other selected drill assay results released during the quarter include:

At the Rising Sun prospect:

- 11.5 m @ 5.5 g/t AuEq (4.0 g/t Au, 0.9% Sb) from 185.0 m in SDDSC078 including:
 - 0.4 m @ 123.8 g/t AuEq (103.5 g/t Au, 12.8% Sb) from 193.0 m

At the Apollo prospect:

- 10.4 m @ 22.4 g/t AuEq (18.6 g/t Au, 2.4% Sb) from 542.2 m in SDDSC066, including:
 - 1.0 m @ 224.3 g/t AuEq (188.8 g/t Au, 22.5% Sb) from 544.2 m
- 7.8 m @ 5.4 g/t AuEq (4.0 g/t Au, 0.9 % Sb) from 401.3 m in SDDSC066, including:
 - 0.4 m @ 42.7 g/t AuEq (28.1 g/t Au, 9.3% Sb) from 404.6 m
- 13.3 m @ 1.6 g/t Au from 1,009.8 m in SDDSC068, including:
 - 0.5 m @ 23.8 g/t Au from 1,010.4 m within a broader zone of mineralisation including at Apollo. Visible gold was noted.

Corporate

- Acquisition of Laura Prospecting Licence at Redcastle JV
- Acquisition of additional freehold land at Sunday Creek
- Outline of exploration strategy and catalysts to April 2024
- The company is fully funded and permitted with \$11.75m in cash

OHS

- One reported Lost Time Injury which has been investigated. This injury has prompted a review of our safety systems and we have now instigated a “Take 5” task-based risk assessment process.

Company overview

Southern Cross Gold Ltd is an exploration stage company with a focus on gold exploration in Australia. The Company's focus is primarily on the exploration and development of its portfolio of exploration projects through its wholly owned subsidiaries, Clonbinane Goldfield Pty Ltd ("Clonbinane"), Mawson Victoria Pty Ltd ("Mawson Victoria") and Mawson Queensland Pty Ltd ("Mawson Queensland") which hold rights in the following the Projects:

1. Sunday Creek Project – Victoria - 100% ownership via Clonbinane;
2. Whroo Project – Victoria - earning up to 70% ownership via Mawson Victoria;
3. Redcastle Project – Victoria - 70% ownership via Mawson Victoria; and
4. Mt Isa Project – 100% ownership via Mawson Queensland.

The Victorian projects are over substantial areas of three of the nine historic high grade epizonal goldfields of the Melbourne Zone in Central Victoria covering 471 km². The Mt Isa Project covers 861 km² of tenure in the Cloncurry/Mount Isa block in Queensland, over a combined 60 km of strike.

The Company also holds a strategic 9.2% ownership of Nagambie Resources Ltd (ASX: NAG) ("Nagambie") which entitles the Company to a Right of First Refusal over 3,300 km² of tenements controlled by Nagambie in central Victoria.

Sunday Creek Project

The 100%-owned Sunday Creek epizonal-style gold project is located 60 km north of Melbourne within 19,365 ha of granted exploration tenements.

Diamond drilling at Sunday Creek continued during the period with the objective of defining gold mineralisation at depth at the main drill area over a 1 km trend between the Golden Dyke and Apollo zones and up to 7,500 m along strike to the north-east at the Tonal, Consols and Leviathan prospects which was the first ever drilling along a 10,000 m mineralised trend at Sunday Creek that extends beyond the main drill area and is defined by historic workings and soil sampling.

The Company considers Sunday Creek to be the best new exploration discovery in Australia in recent times with 34 individual intersections exceeding 50 AuEq g/t * m ("AuEq g/t x width in m") and 20 individual intersections exceeding 100 AuEq g/t * m. 25 >100 cumulative grade x metres ("AuEq g/t x m") holes have now been intersected on the project at the time of writing. Mineralisation at the Golden Dyke to Apollo drill area remains open at depth and along strike.

The Company reported twelve drill holes (SDDSC066-76, 78) during the period. Continuity within wide zones and high-grades is now evident down to approximately 1,000 m vertical depth. Subsequent to the end of the period, the Company announced results from drillhole SDDSC077B and had 23 holes that had been completed and were being geologically processed and chemically analysed and awaiting release (SDDSC79-81, 83-90, SDDTS001-7, SDDCN001 and SDDL001-4) with four holes (SDDSC082, 91-93) in drill progress (Figures 3 - 5).

Drill Hole Discussion

Mineralised shoots at Sunday Creek are formed at the intersection of the sub-vertical to shallower dipping 330 degree striking mineralised veins and a steep east-west striking, north dipping structure hosting dioritic dykes and related intrusive breccias.

Rising Sun Prospect

SDDSC067 drilled some of the highest grades of antimony (up to 54.0% Sb) and gold (up to 140.0 g/t Au) on the project. The hole followed up 115 m above a single intersection in SDDSC050, to the west of the Rising Sun vein and successfully defined a new high grade vein. Highlights included:

- 0.6 m @ 161.6 g/t AuEq (87.6 g/t Au, 46.8% Sb) from 415.7 m, including:
 - 0.1 m @ 170.5 g/t AuEq (140.0 g/t Au, 19.3% Sb) from 415.7 m
 - 0.5 m @ 159.3 g/t AuEq (74.0 g/t Au, 54.0% Sb) from 415.8 m

SDDSC069 tested the Windsor Castle vein east of Rising Sun. The hole was drilled perpendicularly across SDDSC053 and demonstrated continuity of higher-grade mineralisation. Highlights included:

- 2.1 m @ 6.2 g/t AuEq (5.0 g/t Au, 0.7% Sb) from 294.4 m, including:
 - 0.4 m @ 24.7 g/t AuEq (21.0 g/t Au, 2.3% Sb) from 294.4 m

SDDSC070 was drilled to test the most easterly extents of mineralisation (in the central zone), 30 m to the north of SDDSC050 mineralisation and hit three different vein structures of similar tenor, one higher grade:

- 5.2 m @ 2.6 g/t AuEq (2.6 g/t Au, 0.0% Sb) from 766.0 m, including:
 - 0.9 m @ 11.5 g/t AuEq (11.5 g/t Au, 0.0% Sb) from 766.8 m

SDDSC071 intersected the Rising Sun vein in a 90 m gap between MDDSC020 and MDDSC021 again demonstrating downdip continuity over large distances. Highlights included:

- 7.1 m @ 4.0 g/t AuEq (2.0 g/t Au, 1.3% Sb) from 270.0 m, including:
 - 3.0 m @ 7.9 g/t AuEq (3.6 g/t Au, 2.7% Sb) from 270.0 m
- 8.8 m @ 1.2 g/t AuEq (0.7 g/t Au, 0.4% Sb) from 280.5 m, including:
 - 0.5 m @ 5.2 g/t AuEq (2.0 g/t Au, 2.1% Sb) from 281.4 m

SDDSC075 was the first hole to test the 200 m wide gap between Rising Sun and Gladys. The hole successfully proved the continuity of mineralisation, albeit at lower grade. Further drilling is warranted to target higher grade portions of the veins. Better results included:

- 2.5 m @ 1.0 g/t AuEq (0.9 g/t Au, 0.1 %Sb) from 225.7 m

SDDSC078 was drilled 250 m up-dip of SDDSC050 (305.8 m @ 2.4 g/t AuEq) and successfully targeted the high-grade core of mineralisation at Rising Sun. Visible gold was noted in six individual restricted zones within the hole. Highlights included:

- **11.5 m @ 5.5 g/t AuEq** (4.0 g/t Au, 0.9% Sb) from 185.0 m, including:
 - 0.4 m @ 123.8 g/t AuEq (103.5 g/t Au, 12.8% Sb) from 193.0 m
- **11.4 m @ 3.1 g/t AuEq** (2.4 g/t Au, 0.4% Sb) from 203.6 m, including:
 - 1.1 m @ 19.6 g/t AuEq (19.6 g/t Au, 0.0% Sb) from 204.8 m
- **11.2 m @ 10.6 g/t AuEq** (10.4 g/t Au, 0.1% Sb) from 257.0 m, including:
 - 0.7 m @ 162.1 g/t AuEq (162.0 g/t Au, 0.0% Sb) from 260.0 m
- **5.9 m @ 6.3 g/t AuEq** (6.1 g/t Au, 0.1% Sb) from 281.0 m, including:
 - 0.9 m @ 39.2 g/t AuEq (39.1 g/t Au, 0.1% Sb) from 281.0 m
- **7.0 m @ 5.5 g/t AuEq** (3.1 g/t Au, 1.5% Sb) from 392.0 m, including:
 - 0.9 m @ 40.1 g/t AuEq (22.5 g/t Au, 11.2% Sb) from 393.2 m

SDDSC074 and **SDDSC076** were designed to define the **Golden Orb Fault** which offsets the mineralisation by 150 m to the south. The recognition and definition of this fault has been critical in explaining why mineralisation becomes much more extensive (transitioning from two to 13 individual high-grade veins sets at depth at Rising Sun around SDDSC050. Drill holes SDDSC074 (no significant mineralisation) and SDDSC076 intersected low-grade mineralisation because they were both drilled into the Golden Orb Fault before they were able to reach the main mineralised zone.

Subsequent to the end of the quarter, the Company released **SDDSC077B (404.4 m @ 5.6 g/t AuEq (5.1 g/t Au, 0.3% Sb) from 374.0 m** (uncut)) that was designed to demonstrate continuity of mineralised structures between 25 m to 65 m spacing around hole SDDSC050 (305 m @ 2.4 g/t AuEq traversing through thirteen high grade veins, reported 20 November 2022) at Rising Sun. SDDSC077B (cumulative 2,272 AuEq g/t x m) exceeded SDDSC050 (cumulative 852 AuEq g/t x m), the previous best hole, by almost three times.

SDDSC077B hole intersected 13 zones of mineralisation from 375 m to 787 m down hole depth with visible gold noted in 28 individual restricted zones. SDDSC050 also traversed across the same 13 vein structures intersected in SDDSC077B with between 25 m to 60 m distance separating the two holes.

SDDSC077B drilled parallel to the host breccia dyke but at a high angle to the predominant NW high-grade mineralisation trend, and therefore, the true thickness of the mineralised interval is interpreted to be approximately 60% to 70% of the sampled thickness.

Cumulatively the hole recorded a 2,272 g/t AuEq x m intersection. **Seven intervals had >100 g/t Au (up to 2,679.8 g/t Au), 20 intervals had >15 g/t Au and 20 intervals had >5% Sb (up to 55.8% Sb).** Uncut, the hole graded **404.4 m @ 5.6 g/t AuEq (5.1 g/t Au, 0.3 %Sb) from 374.0 m.**

Highlights included:

- **5.6 m @ 17.8 g/t AuEq** (14.1 g/t Au, 2.4% Sb) from 392.2 m, including:
 - **0.2 m @ 31.5 g/t AuEq** (31.4 g/t Au, 0.0% Sb) from 392.2 m
 - **0.4 m @ 231.6 g/t AuEq** (182.0 g/t Au, 31.4% Sb) from 394.2 m
- **5.4 m @ 39.3 g/t AuEq** (38.0 g/t Au, 0.8% Sb) from 407.7 m, including:
 - **0.4 m @ 593.6 g/t AuEq** (574.0 g/t Au, 12.4% Sb) from 407.7 m
- **24.0 m @ 3.6 g/t AuEq** (3.2 g/t Au, 0.2% Sb) from 417.0 m, including:
 - **1.5 m @ 43.1 g/t AuEq** (39.7 g/t Au, 2.1% Sb) from 422.1 m
 - **0.4 m @ 24.0 g/t AuEq** (17.3 g/t Au, 4.2% Sb) from 428.2 m
- **4.9 m @ 36.1 g/t AuEq** (20.1 g/t Au, 10.1% Sb) from 445.2 m, including:
 - **1.4 m @ 113.9 g/t AuEq** (66.6 g/t Au, 29.9% Sb) from 445.2 m
 - **0.3 m @ 54.0 g/t AuEq** (12.1 g/t Au, 26.5% Sb) from 449.7 m
- **33.8 m @ 3.0 g/t AuEq** (2.4 g/t Au, 0.4% Sb) from 478.0 m, including:
 - **1.2 m @ 11.9 g/t AuEq** (10.8 g/t Au, 0.7% Sb) from 486.6 m
 - **0.5 m @ 21.0 g/t AuEq** (20.9 g/t Au, 0.0% Sb) from 491.9 m
 - **1.0 m @ 19.6 g/t AuEq** (10.1 g/t Au, 6.0% Sb) from 498.5 m
 - **0.2 m @ 183.2 g/t AuEq** (168.0 g/t Au, 9.6% Sb) from 500.9 m
 - **0.3 m @ 6.1 g/t AuEq** (5.5 g/t Au, 0.4% Sb) from 506.6 m
- **6.5 m @ 10.2 g/t AuEq** (2.8 g/t Au, 4.7% Sb) from 573.0 m, including:

- **2.6 m @ 24.1 g/t AuEq** (6.3 g/t Au, 11.3% Sb) from 574.0 m
- **6.9 m @ 205.2 g/t AuEq** (204.5 g/t Au, 0.4% Sb) from 733.8 m, including:
 - **1.1 m @ 9.8 g/t AuEq** (9.5 g/t Au, 0.2% Sb) from 737.1 m
 - **0.8 m @ 1,741.5 g/t AuEq** (1,736.4 g/t Au, 3.3% Sb) from 739.9 m:
 - Including **0.4 m @ 731.2 g/t AuEq** (731.0 g/t Au, 0.1% Sb) from 739.9 m
 - Including **0.4 m @ 2,679.8 g/t AuEq** (2,670 g/t Au, 6.2% Sb) from 740.3 m

The Rising Sun area remains open up-dip, down-dip and along strike.

Apollo Prospect

At the time of its release, **SDDSC066** was the third best intersection on the Sunday Creek project, drilled at the east end of drilled mineralisation at Sunday Creek (in the Apollo area). The hole was designed to test five main mineralised vein sets and intersected **312 m @ 1.4 g/t AuEq (1.1 g/t Au, 0.2% Sb) from 240.1 m** (with no lower cut). It was the greatest down dip extension of mineralisation to date on the eastern end of the main mineralised body at Sunday Creek. In total nine intervals > 15 g/t Au (up to 188.8 g/t Au), and six intervals >5% Sb (up to 22.5% Sb) were intersected.

Specifically, SDDSC066 was drilled east to west sub-parallel to the host sequence, a zone of intensely altered 'bleached' sericite-albitic siltstones, and sericite-carbonate-albite altered dyke rocks that range from 50 m to 200 m wide. The hole was also drilled at a moderate to high angle to the north-west striking mineralised vein sets that regularly cross the host structure on a predominate north-west orientation and are typically 10 m to 40 m wide (cut off dependent), 20 m to 60 m along strike, and 300 m to 830 m down dip. Therefore, the hole was able to intersect five main mineralised structures over a 312 m wide downhole interval, while drilling inside the mineralised host.

For the first time a fibrous Pb-Sb sulphosalt, possibly boulangerite ($Pb_5Sb_4S_{11}$), a diagnostic alteration mineral in other epizonal deposits, including Fosterville, was identified in void spaces in quartz at 262.5 m in SDDSC066 (Photo 1). Highlights included:

- **10.5 m @ 5.8 g/t AuEq** (4.2 g/t Au, 1.0% Sb) from 302.8 m, including:
 - 0.2 m @ 18.3 g/t AuEq (18.3 g/t Au, 0.0% Sb) from 306.2 m
 - 1.0 m @ 23.1 g/t AuEq (12.8 g/t Au, 6.5% Sb) from 308.0 m
 - 1.5 m @ 17.4 g/t AuEq (14.2 g/t Au, 2.0% Sb) from 311.0 m
- **7.8 m @ 5.4 g/t AuEq** (4.0 g/t Au, 0.9 %Sb) from 401.3 m, including:
 - 0.4 m @ 42.7 g/t AuEq (28.1 g/t Au, 9.3% Sb) from 404.6 m
 - 0.2 m @ 44.0 g/t AuEq (40.5 g/t Au, 2.2% Sb) from 407.5 m
- **10.4 m @ 22.4 g/t AuEq** (18.6 g/t Au, 2.4% Sb) from 542.2 m, including:
 - **1.0 m @ 224.3 g/t AuEq** (188.8 g/t Au, 22.5% Sb) from 544.2 m

SDDSC068 was drilled 500 m down-dip of SDDSC066 and successfully targeted high-grades including **0.5 m @ 23.8 g/t Au from 1,010.4 m** within a broader zone of mineralisation including **13.3 m @ 1.6 g/t Au from 1,009.8 m** at Apollo. Visible gold was noted.

SDDSC073 was drilled 260 m above SDDSC068 and drilled a very broad interval of the host to mineralisation with altered sediments and dyke observed from 585 m to 750 m downhole. The hole is considered a near-miss of the high grade core with lower grade mineralisation intersected.

The Apollo area remains open up-dip, down-dip below 1,000 m depth and along strike.

Drill Hole Progress

Drilling with four rigs is in progress at the time of this report at the main drill area. The company has stated that it will **drill an additional 26,000 m by April 2024**, with 19,626 m drilled in the calendar year to the end of the quarter.

Eleven holes (SDDSC79-81, 83-90) were being geologically processed and chemically analysed at the end of the quarter, with four holes (SDDSC082, 91-93) in drill progress (Figures 2-5). Twelve holes (SDDTS001-7, SDDCN001 and SDDL001-4) for 2,383 m (including two redrilled collars) have been completed at the Leviathan – Consols – Tonstal regional area between 3,500 m to 7,500 m along strike from the main drill area. Results are expected in the coming quarter (Figure 7).

Preliminary visual geological logs of SDDSC082, drilled 100 m below hole SDDSC077B at Rising Sun intersected **multiple zones of mineralisation with visible gold noted in certain restricted zones**. Assays are pending (Figures 4 and 5).

About Sunday Creek – Scale and Opportunity

At Sunday Creek, gold and antimony form in veins that cut across a steeply dipping zone of intensely altered rocks (the “host”). When looked at from above, in plan view, the host resembles the side rails of a ladder, where the mineralised veins are the rungs. At Apollo and Rising Sun these ‘rungs’ have been defined over 350 m to 850 m in depth extent, are 10 m to 20 m wide and 20 m to 100 m in strike. Our systematic drill program is strategically targeting these significant vein formations, initially along 1,200 m strike of the host from Christina to Apollo, of which approximately 400 m has been more intensively drill tested (Rising Sun to Apollo). Twenty-two ‘rungs’ have been discovered to date in the Rising Sun to Apollo zone, defined by high-grade intercepts (20 - 400 g/t Au) and lower grade edges. Ongoing step-out drilling is aiming to uncover the potential extent of this mineralised system. With the host extending 8,000 m in length from the core area to Leviathan/Tonstal prospects, 40 m to 150 m wide and over 900 m deep. We are only scratching the surface on the opportunities that await at Sunday Creek.

Sunday Creek compares favourably with globally significant high grade gold discoveries at this stage of the project’s development. Cumulatively, 161 drill holes for 38,284 m have been completed at Sunday Creek. In total, **34 individual intersections have ranged between 50 - 100 AuEq g/t x m** (“AuEq g/t x width in m”) and **20 individual intersections have exceeded 100 AuEq g/t x m**. Given a 2,272 g/t AuEq x m cumulative intersection in this result for SDDSC077B, Sunday Creek now contains a total of twenty-five >100 g/t AuEq x m cumulative drill holes.

The Sunday Creek epizonal-style gold project is located 60 km north of Melbourne within 19,365 hectares of granted exploration tenements. SXG is also the freehold landholder of 133.29 hectares that form the key portion in and around the main drilled area at the Sunday Creek Project.

Geologically, the project is located within the Melbourne Structural Zone in the Lachlan Fold Belt. The regional host to the Sunday Creek mineralisation is an interbedded turbidite sequence of siltstones and minor sandstones metamorphosed to sub-greenschist facies and folded into a set of open north-west trending folds.

Mineralisation, Scale and Comparison to Other Epizonal Deposits

Mineralisation at Sunday Creek is structurally controlled, with increased mineralisation associated with brittle-ductile shear veins that show quartz-stibnite extension veining, stibnite-gold-matrix breccias and disseminated mineralisation in the form of arsenian pyrite, pyrite and arsenopyrite. The host for mineralisation is an east to north-east trending zone of intensely altered ‘bleached’ sericite-carbonate +/- silica altered siltstones and dyke rocks that ranges from 50 m to 200 m wide. A larger arsenic anomaly is associated with gold mineralisation, mostly represented by arsenian-pyrite but arsenopyrite-bearing zones

predominate below 700 m vertical depth with a clear spatial relationship to high-grade gold. A sulphidic (pyritic) halo, predominately in bleached pyrite-sericitic veins rounds out the larger visible alteration footprint.

Mineralised vein sets cross the host structure at on a predominate north-west orientation and are typically 10 m to 40 m wide (cut off dependent), 20 m to 60 m along strike, and 300 m to 830 m down dip. As compared to other deposits, Sunday Creek benefits from the presence of multiple high-grade veins. Mineralised shoots at Sunday Creek can also be formed at the intersection of the sub-vertical to shallower dipping 330 degree (NW) striking mineralised veins sets and the east-west striking, steeply north dipping structure hosting dioritic dykes and related intrusive breccias. Higher grades of mineralisation are often observed to concentrate on the dyke/altered sediment interface within individual vein sets.

At Sunday Creek, and as is typical for epizonal deposits (for example Fosterfield and Costerfield, Reefton (NZ)), visible gold becomes increasingly significant at depth below approximately 800 m. This represents the different temperatures and changes in structural regimes of formation of epizonal Au-Sb and Au dominant mineralisation. Gold at Sunday Creek is hosted in quartz and carbonate vein sets, associated with stibnite bearing veins and breccias.

Critical Metal Epizonal Gold-Antimony Deposits

Sunday Creek is an epizonal gold-antimony deposit formed in the late Devonian period (similar to Fosterfield, Costerfield, Redcastle and Whroo), 60 million years later than mesozonal gold systems formed in Victoria (ie: Ballarat and Bendigo). Epizonal deposits are a form of orogenic gold deposit classified according to their depth of formation: epizonal (<6 km), mesozonal (6-12 km) and hypozonal (>12 km).

Epizonal deposits in Victoria often have associated high levels of the metal, antimony, and Sunday Creek is no exception. Geoscience Australia reported that as at 2019, antimony is a critical metal where China and Russia combined produce approximately 82% of the antimony raw material supply. Antimony features highly on the critical minerals lists of many countries including Australia, the United States of America, Canada, Japan and the European Union. Australia ranks seventh for antimony production despite all production coming from a single mine at Costerfield in Victoria, located nearby to all SXG projects. Antimony alloys with lead and tin which results in improved properties for solders, military applications, bearings and batteries. Antimony is a prominent additive for halogen-containing flame retardants. Adequate supplies of antimony are critical to the world's energy transition, and to the high-tech industry, especially the semi-conductor and defence sectors. For example, antimony is a critical element in the manufacture of lithium-ion batteries and to the next generation of liquid metal batteries that lead to scalable energy storage for wind and solar power.

Gold Equivalent Calculation

SXG considers that both gold and antimony that are included in the gold equivalent calculation ("AuEq") have reasonable potential to be recovered at Sunday Creek, given current geochemical understanding, historic production statistics and geologically analogous mining operations. Historically, ore from Sunday Creek was treated onsite or shipped to the Costerfield mine, located 54km to the northwest of the project, for processing during WW1. The Costerfield mine corridor, now owned by Mandalay Resources Ltd contains 2 million ounces of equivalent gold (Mandalay Q3 2021 Results), and in 2020 was the sixth highest-grade global underground mine and a top five global producer of antimony.

SXG considers that it is appropriate to adopt the same gold equivalent variables as Mandalay Resources Ltd in its Mandalay Technical Report, 2022 dated 25 March 2022. The gold equivalence formula used by Mandalay Resources was calculated using recoveries achieved at the Costerfield Property Brunswick Processing Plant during 2020, using a gold price of US\$1,700 per ounce, an antimony price of US\$8,500 per tonne and 2021 total year metal recoveries of 93% for gold and 95% for antimony, and is as follows: ***AuEq = Au (g/t) + 1.58 × Sb (%)***.

Based on the latest Costerfield calculation and given the similar geological styles and historic toll treatment of Sunday Creek mineralisation at Costerfield, SXG considers that a $AuEq = Au (g/t) + 1.58 \times Sb (\%)$ is appropriate to use for the initial exploration targeting of gold-antimony mineralisation at Sunday Creek.

Queensland Projects

During the quarter there was no significant exploration activities carried out at the Company's Queensland exploration permits.

Corporate

Outline of corporate and exploration strategy

During the quarter the Company outlined its exploration strategy and upcoming catalysts for the Sunday Creek Project.

It stated three clear objectives that will have the largest emphasis over the next six months:

- a) **Demonstrate Grade.** Add and connect the existing high-grade zones in and around Rising Sun (SDDSC046: 21.5 m @ 15.0 g/t AuEq incl. 2.1 m @ 121.6 g/t AuEq) and Apollo (SDDSC066: 10.4 m @ 22.4 g/t AuEq incl. 1.0 m @ 224.3 g/t AuEq).
- b) **Demonstrate Volume.** Along strike and down-dip by step-out drilling to add to the existing mineral endowment. To date the focus area has been a 1,000 m strike to 1,000 m depth, of which we have only tested less 50%. All mineralised occurrences at Apollo, Rising Sun, Golden Dyke and Christina are all open down dip and along strike.
- c) **Demonstrate Scale.** Exploration at Sunday Creek has district-scale potential. There is an 11,000 m mineralised trend extending beyond the initial target drill area, defined by historic workings and soil sampling. This large footprint is being drill tested for the very first time at the Tonstal, Consols and Leviathan prospects. Twelve holes for 2,383 m have now been completed within the regional area between 3,500 m to 7,500 m along strike from the core drill area. Results from the program will be released imminently (Figure 7).

With four diamond drill rigs operating at site, **the plan is to drill an additional 26,000 m by April 2024.**

Acquisition of Prospecting Licence PL6415 – Redcastle

During the quarter the Company acquired Prospecting Licence PL6415 located in the Redcastle district of the Victorian goldfields ("Laura").

The strategic acquisition secures 100% one of the higher-grade parts of the Redcastle goldfield, where recent drilling has identified very high grades (up to 704 g/t Au and 24.7% Sb) within continuous and targetable structures above a 1.3 km long and a coherent IP anomaly. It consolidates SXG's extensive ground holding and best drill grades at the Redcastle gold and antimony field.

Laura is located entirely within SXG's 70% owned Redcastle JV, 2 km immediately north of Mandalay Resources' exploration properties which contain the Costerfield Mine (Figure 1). It forms a key geophysical target within the Redcastle goldfield, with a 1.3 km-long coherent induced polarisation ("IP") chargeability anomaly underlying the Laura PL6415. The IP anomaly also sits below historic mines that produced 20,583 oz at 254.6 g/t Au over 2 km strike length down to a maximum depth of 125 m during 1859 to 1865.

Acquisition of further freehold land at the 100%-owned Sunday Creek project

The Company purchased a further 0.65 hectares of freehold land that is located adjacent to both the main access and current freehold ownership at the Sunday Creek project during the quarter. It secures surface access and provides additional area for any potential future gold operation.

ESG

Environment

- Southern Cross Gold has undertaken a major project to make safe all the old workings at Sunday Creek. To date we have re-collared and fenced the Golden Dyke mine. When we re-collar the shaft we stabilise it, which reduces the possibility of the shaft caving in, then we can safely fence off the shaft. The surrounding pits on our freehold land have been fenced to keep the public and any animals out of these deep holes. We are currently in negotiation with the Department of Energy, Environment and Climate Action (DEECA) to make the remaining old workings including the Rising Sun and Apollo Shafts on Retention Licence 6040 safe.
- We have recently completed a water bore on our freehold land to reuse the water lost into the wall rocks during diamond drilling. This bore will lower our drilling costs and further reduce the amount of water delivered to Sunday Creek.
- Baseline Hydrogeological, Ecological and Geochemical Assessments were started during the quarter at Sunday Creek. These studies will document to the public and jurisdictional decision makers that key environmental issues have been identified and will be monitored and mitigated, as we move into any approvals stage.

Safety

- During the quarter SXG reported one Lost Time Injury when a field assistant got a piece of metal in their eye while using a hand tool. New additional PPE, safety procedures and training have been put in place to ensure this type of incident is not repeated.
- The company has also instigated the Take 5 safety practice. Take 5 is a 5-step procedure workers use to prevent accidents and overall make their working environments safer. The take 5 safety steps are:
 - Stop and think
 - Look and identify
 - Assess the risk
 - Control hazards
 - Monitor hazards
- As we grow as a company, we are continuing to improve our safety systems. This quarter we have introduced an online visitor's induction and an electronic tag in and out system to ensure we know when visitors, contractors or employees are onsite. This is linked to our new emergency maps and evacuation procedures for the Sunday Creek Project. New signage around the project to ensure that all staff and visitors are appropriately informed about any risks, wear the correct PPE and aware of what to do if there is an emergency.
- The company installed a defibrillator and improved the safety station at our Kilmore Core Shed. Another defibrillator has been placed at the company house on Hibberds Lane and this unit has been placed so if required the local community can access the unit.
- Many of our staff undertook fire and bushfire training this quarter. The most enjoyable part of the course was using the fire extinguishers and hoses. Thank you to our regional CFA training staff for this valuable training.

Community

- Southern Cross Gold has a new community focused website that shows our commitment to our local community, the environment, and how our company values are reflected in the work we do. Please take a look the website www.southerncrossgoldcommunity.com.au, also you can follow us on Facebook and Instagram.
- Southern Cross Gold is committed to our local region, and this is shown by our continued involvement in the Clonbinane Safer Together Project. This is a community-based emergency management plan that brings emergency services, industry, business, government, and community together, to prepare for, respond efficiently to, and minimise the effects and consequences of emergencies that arise from natural disasters such as bush fires. This quarter we volunteered at a community BBQ designed to bring to the Clonbinane and Reedy Creek communities together as they prepare for the coming fire season. Southern Cross have also supplied the project with an outline of our capabilities (people, skills and equipment) should there be a natural disaster in our community surrounding Sunday Creek.
- We are sponsoring the Clonbinane CFA with over \$8,000 of equipment that need for the upcoming fire season. The CFA also expressed relief in knowing that a defibrillator is now available at the Sunday Creek Project.
- Our geologists have been involved with several career days at the local high schools in Wallan and Seymour as well as at Monash University.
- We are continuing to develop our strong relationship with the Taungurung Land and Waters Council with the ongoing work to publish a dual language children's book, written by local children for children. Aunty Loraine Padgham is heading up the project.
- Aunty Loraine joined the Southern Cross Gold table at the Melbourne Mining Club this quarter proudly wearing her possum skin cloak. At the table we were joined by the Mayor of Mitchell Shire Fiona Stevens, Professor Maria Forsyth Deputy Director, Institute for Frontier Materials at Deakin University, popular resources journalist Kristie Batten, our director Georgina Carnegie, Laura Chibnall (winner of 2021 Exceptional Women in Resources Award) as well as our own award-winning Claudia Bowan and Lisa Gibbons.
- Southern Cross Gold continues to be industry leaders in inclusion as we reach gender diversity with 50% of our staff identifying as female. We aim to make sure that every employee is valued and can fulfil their potential, regardless of their background, lifestyle or position in the company.

Governance

- Senior Southern Cross Gold staff continue to be involved in the TSM (Towards Sustainable Mining) Initiative leaders' program. TSM provides globally recognised environmental, social and governance (ESG) credentials for responsible mining, enhancing government, investors, and customer confidence. TSM is a major step forward in continuing to build stronger relationships between the Australian minerals industry and its host communities built on transparency and trust.
- We continue to keep our local council at Sunday Creek, the Mitchell Shire Council, informed and engaged as the project evolves.

Interests in Mining Tenements

Below is a summary of the mining tenements held by the Company at the end of the quarter:

Mining Tenement	Location	Beneficial Percentage held	Interest acquired/farm-in or disposed/farm-out during the quarter
EL 6163 – Sunday Creek	Victoria, Australia	100%	-
EL 7232 – Sunday Creek	Victoria, Australia	100%	-
RL 6040 – Sunday Creek	Victoria, Australia	100%	
EL 6158 - Whroo	Victoria, Australia	- (*Subject to earn-in)	
EL 6212 – Whroo	Victoria, Australia	- (*Subject to earn-in)	
EL 7205 - Whroo	Victoria, Australia	- (*Subject to earn-in)	
EL 7209 – Whroo	Victoria, Australia	- (*Subject to earn-in)	
EL 7237 – Whroo	Victoria, Australia	- (*Subject to earn-in)	
EL 7238 – Whroo	Victoria, Australia	- (*Subject to earn-in)	
RL 2019 – Whroo	Victoria, Australia	- (*Subject to earn-in)	
ELA 7653 – Whroo	Victoria, Australia	- (*Subject to earn-in)	
EL 5546 - Redcastle	Victoria, Australia	**70%	
EL 7498 – Redcastle	Victoria, Australia	**70%	
EL 7499 – Redcastle	Victoria, Australia	**70%	
EPM 26940 – Mt Isa	Queensland, Australia	100%	
EPM 27022 – Mt Isa	Queensland, Australia	100%	
EPM 27025 – Mt Isa	Queensland, Australia	100%	
EPM 26481 – Mt Isa	Queensland, Australia	100%	
EPM 27625 – Mt Isa	Queensland, Australia	100%	
EPM 27626 – Mt Isa	Queensland, Australia	100%	

* **Whroo joint venture** - A subsidiary of the Company, Mawson Victoria Pty Ltd, is party to an Option and Joint Venture Agreement with Nagambie Resources Limited for the Whroo Joint Venture tenements. In meeting \$2,500,000 of exploration commitments and \$250,000 cash payments over a 4-year period set under the Farm-in Agreements by 2 December 2024, Mawson Victoria Pty Ltd will have a 60% economic interest in those tenements. Upon Mawson Victoria Pty Ltd earning a 60% interest, either party may elect by notice to the other to form a joint venture (“JV”) under which the percentage ownership of each of Nagambie Resources Limited and Mawson Victoria Pty Ltd will be 40% and 60%, respectively.

Should the parties not elect to form a 40/60% JV, Mawson Victoria Pty Ltd will then have the option to earn an additional 10% interest in the Optioned Property (for an aggregate 70% interest) by incurring an additional A\$1.5M of exploration expenditures on or before the end of year 6 (cumulative A\$4.0M in years 1 to 6). Once Mawson Victoria Pty Ltd earns a 70% interest, a JV between the parties will be automatically formed. Nagambie Resources Limited may then contribute its 30% ownership with further exploration expenditures or, if it chooses to not contribute, dilute its interest. Should Nagambie Resources Limited’s interest be reduced to less than 5.0%, it will be deemed to have forfeited its interest in the JV to Mawson Victoria Pty Ltd in exchange for a 1.5% net smelter return royalty (“NSR”) on gold revenue.

Should Nagambie Resources Limited be granted the NSR, Mawson Victoria Pty Ltd will have the right to acquire the NSR for A\$4,000,000. As of this date, Mawson Victoria Pty Ltd has met its minimum first year commitments and is working towards meeting its second-year commitment by 2 December 2022.

** **Redcastle Joint Venture** - A subsidiary of the Company, Mawson Victoria Pty Ltd, is party to an Option and Joint Venture Agreement with Nagambie Resources Limited for the Redcastle Joint Venture tenements.

In meeting \$1,000,000 of exploration commitments over a 5-year period set under the Farm-in Agreements by 25 March 2025, the consolidated entity will have a 70% economic interest in those tenements. Once the consolidated entity earns a 70% economic interest, a joint venture between the parties will be formed. Nagambie Resources Limited may then contribute its 30% share of further exploration expenditures or, if it chooses to not contribute, dilute its interest.

Should Nagambie Resource Limited's interest be reduced to less than 5%, it will be deemed to have forfeited its interest in the joint venture to the Company in exchange for a 1.5% net smelter return royalty ("NSR") on gold revenue. Should Nagambie Resources Limited be granted the NSR, the Company will have the right to acquire the NSR for \$4,000,000 per property. As of this date, the Company has earned 70% and the companies are proceeding to form a joint venture.

Additional Information

The table below compares the Company's actual expenditure against the 2 year Use of Funds table contained in the Company's IPO Prospectus dated 17 March 2022:

Use of funds as contained in the Prospectus	2 Year Use of Funds as contained in the Prospectus	Actual amount spent to date
Sunday Creek exploration	\$3,910,200	\$7,444,893
Whroo exploration	\$1,204,950	\$199,653
Redcastle exploration	\$550,250	\$449,627
Mt Isa exploration	\$500,000	\$89,607
Freehold land purchase and capital items	\$2,000,000	\$2,589,716
Admin and corporate	\$1,925,000	\$2,639,364
Costs of the Offers	\$889,600	\$863,526*
Remaining working capital	\$313,300	-
Total	\$11,293,000	\$14,276,386

* Costs of the Offer will be split between equity and profit and loss in the statutory financial reports.

In November 2023, the Company raised \$16 million through a Placement which allowed for the acceleration of exploration expenditure to date.

Appendix 5B related party payments

Amounts included in section 6.1 of the accompanying Appendix 5B relate to following:

- Directors fees and superannuation payments for the August 2023 quarter (\$92,000); and
- Amounts paid to Non-Executive Director, Ms Georgina Carnegie, for consulting services provided relating to progressing the Company's Critical Metals strategy. (\$19,600).

– Ends –

This announcement has been authorised for release by the Board of SXG.

Competent Person Statement

Information in this report that relates to new exploration results contained in this report is based on information compiled by Michael Hudson, a Fellow of the Australasian Institute of Mining and Metallurgy. He is MD for Southern Cross Gold Ltd. He has sufficient experience which is relevant to the style of mineralisation and types of deposits under consideration and to the activity being undertaking to qualify as a Competent Person as defined in the 2012 edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the JORC Code). Michael Hudson has consented to the inclusion in this report of the matters based on this information in the form and context in which it appears.

Certain information in this announcement that relates to prior exploration results is extracted from the Independent Geologist's Report dated 16 March 2022 which was issued with the consent of the Competent Person, Mr Terry C. Lees. The report is included the Company's prospectus dated 17 March 2022 which was released as an announcement to ASX on [12 May 2022](#) and is available at www2.asx.com.au under code "SXG".

Certain information in this announcement also relates to prior drill hole exploration results which are extracted from the following announcements and are available to view on www.southerncrossgold.com.au:

- 30 May 2022 [SDDSC033](#)
- 20 October 2022 [SDDSC046](#)
- 21 November 2022 [SDDSC050](#)
- 14 December 2022 [SDDSC050](#)
- 28 February 2023 [SDDSC055](#)
- 30 March 2022 [SDDSC061](#)
- 16 May 2023 [SDDSC064](#)
- 1 June 2023 [SDDSC066](#)

The Company confirms that it is not aware of any new information or data that materially affects the information included in the original document/announcement and the Company confirms that the form and context in which the Competent Person's findings are presented have not materially modified from the original market announcement.

Figure 1: Location of SXG Victorian projects

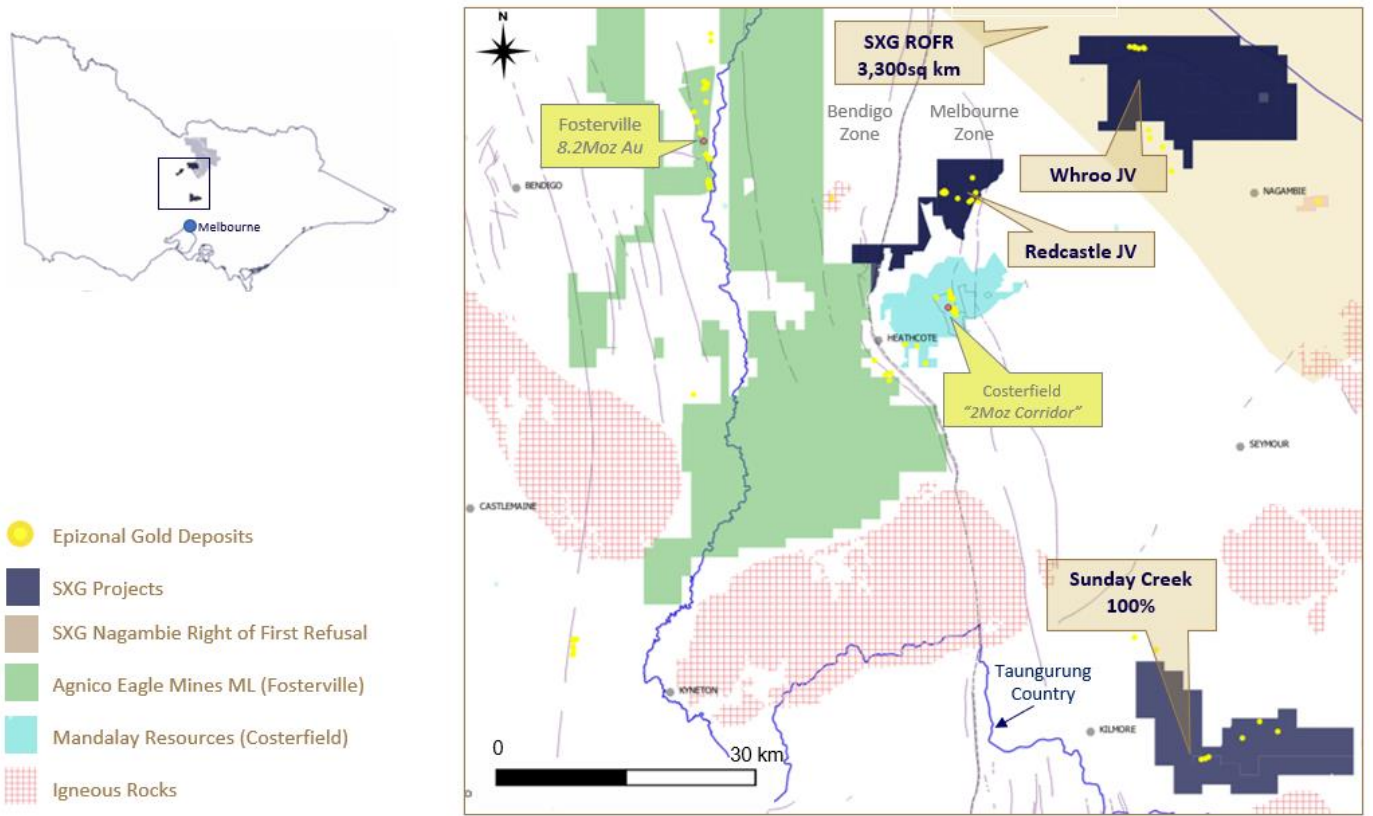

Figure 2: Sunday Creek schematic plan from Christina to Apollo showing wide alteration halo and mineralisation and a selection of drillholes for results reported in this quarter, as well as drillholes reported prior to this quarter.

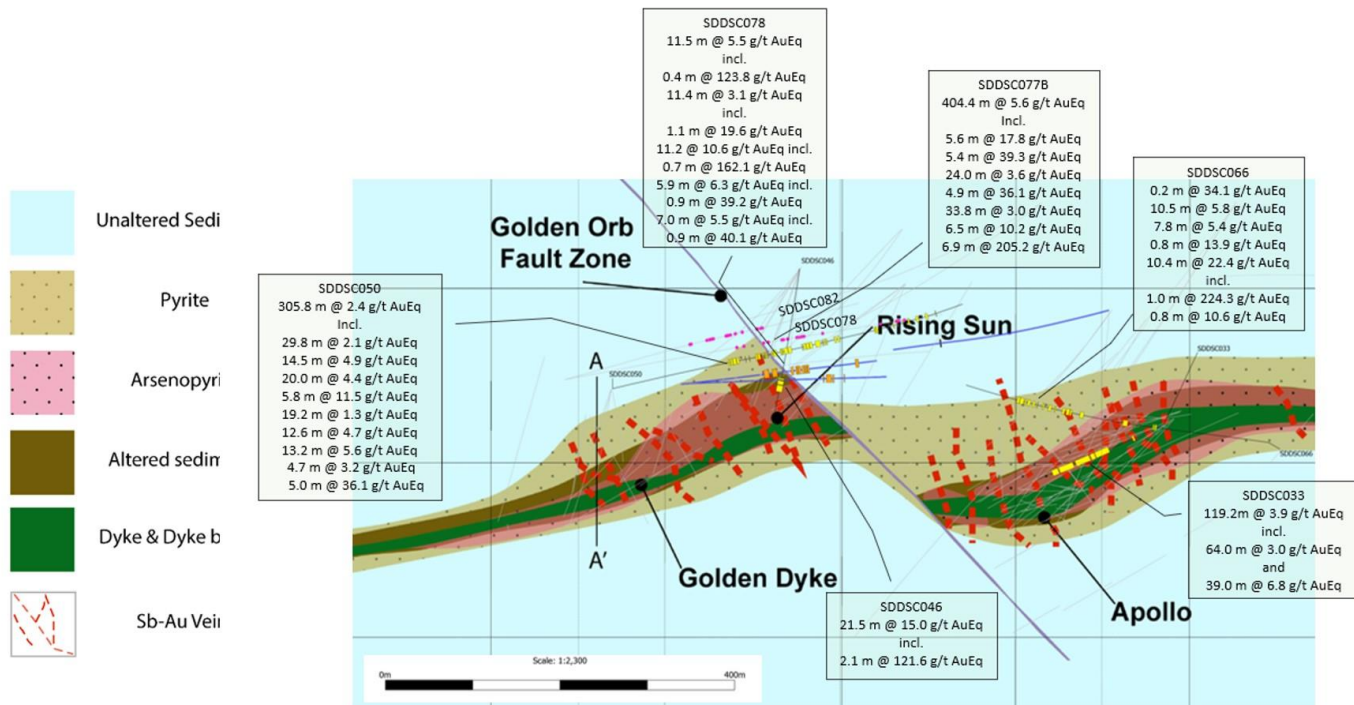

Figure 3: Sunday Creek plan view showing a selection of drillholes for results reported in this quarter, as well as drillholes reported prior to this quarter and pending holes.

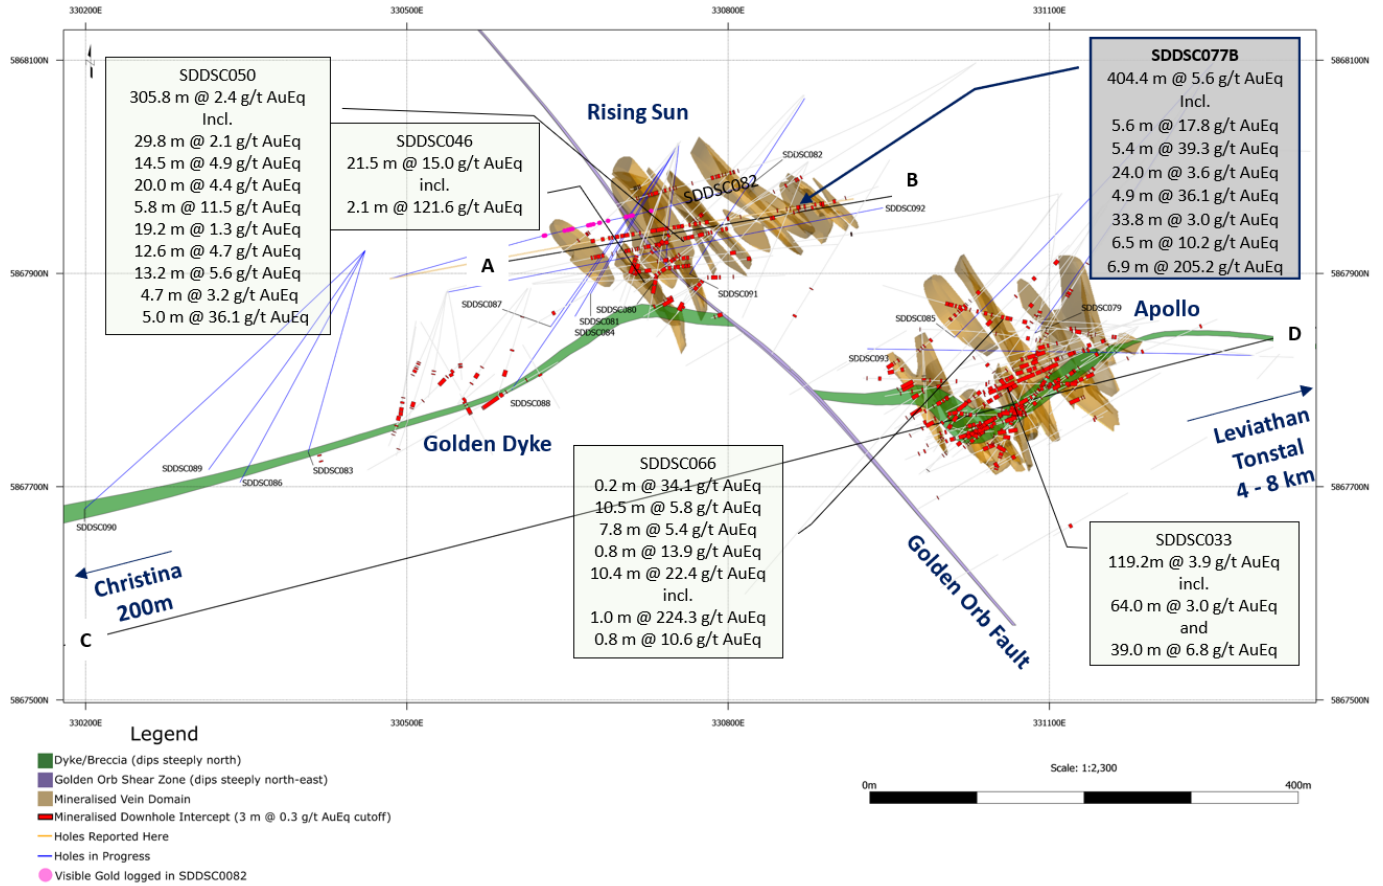

Figure 4: Sunday Creek cropped cross section A-B (50 m influence) (see Figure 2) across the Rising Sun area looking towards 330 with mineralised vein sets, SDDSC077B and prior reported drill holes and holes to report (blue trace).

Figure 5: Sunday Creek east-west longitudinal section looking towards 000 across C-D in the plane of the dyke breccia/ altered sediment host (see Figure 2) showing individual shoots defined to date. Shown are a selection of drillholes for results reported in this quarter, as well as drillholes reported prior to this quarter.

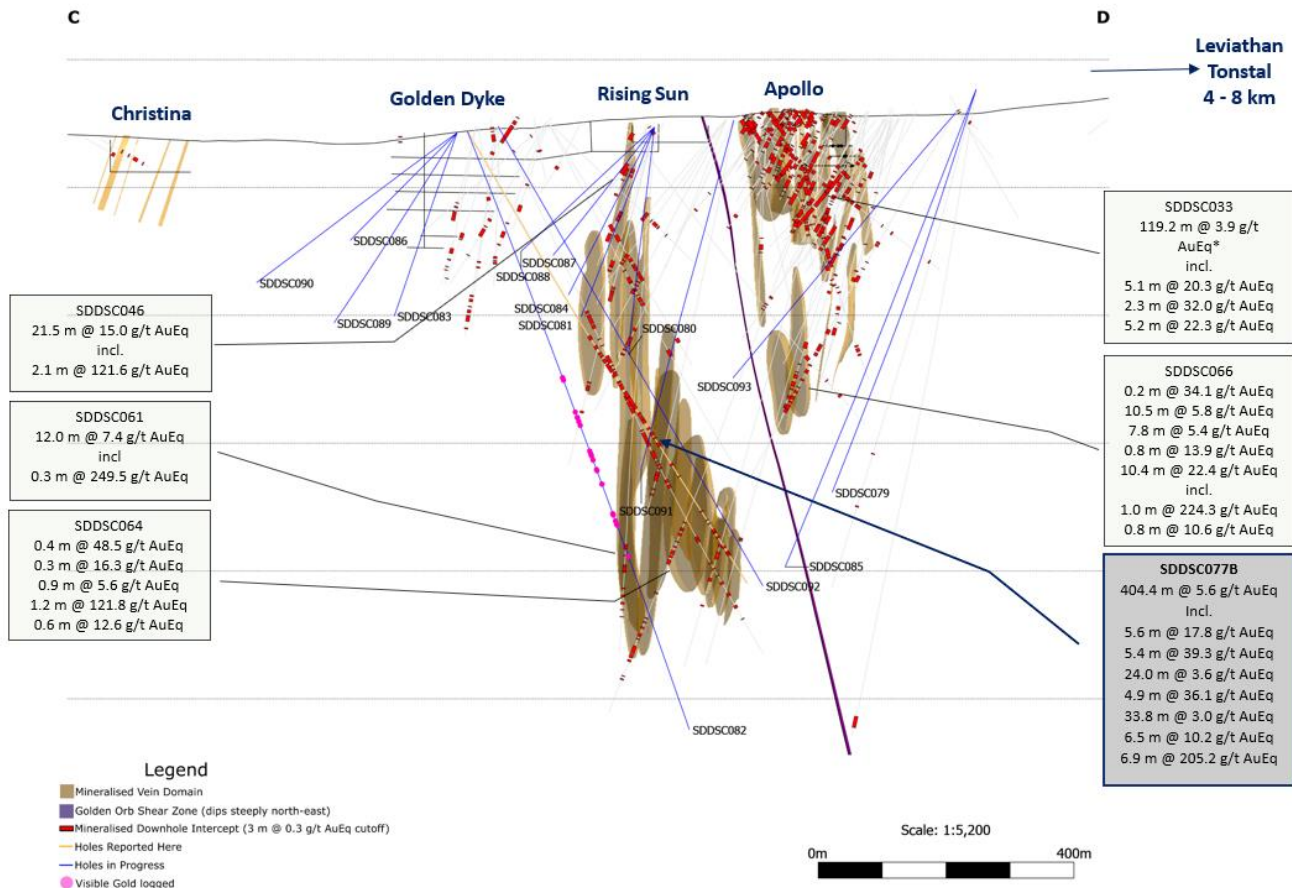

Figure 6: Sunday Creek unconstrained plan view showing SDDSC050 and SDDSC077B assays with other intersections also shown. Veins (red), dyke hanging wall surface relative to SDDSC077B and SDSSC050 (green) and hanging wall mineralised zone (from dyke hanging wall to dotted red line). The distance between SDDSC077B and SDSSC050 is shown along their traces. The RL at the start and end of holes is noted. For reference surface is approximately 300m RL. Of note is continuity of mineralised structures in the dyke hanging wall between SDDSC077B and SDSSC050. Host structure dips steeply to the north, veins dip steeply.

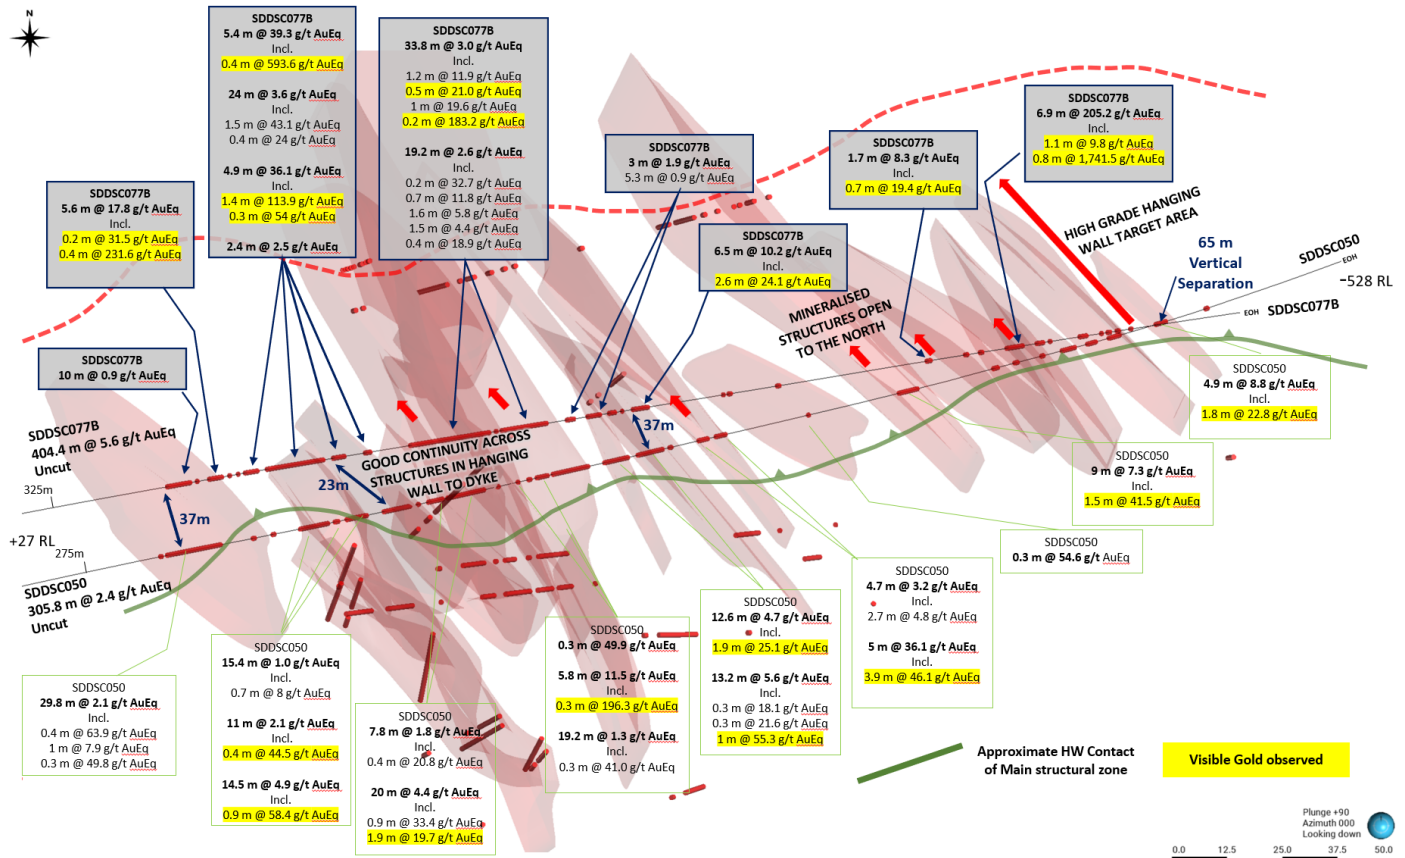

Figure 7: Sunday Creek regional plan view showing LiDAR, soil sampling, structural framework, regional historic epizonal gold mining areas and broad regional areas to be tested in a 2,500 m diamond drill program. The regional drill areas are at Tonstal, Consols and Leviathan located 4,000 m – 7,500 m along strike from the main drill area at Golden Dyke- Apollo.

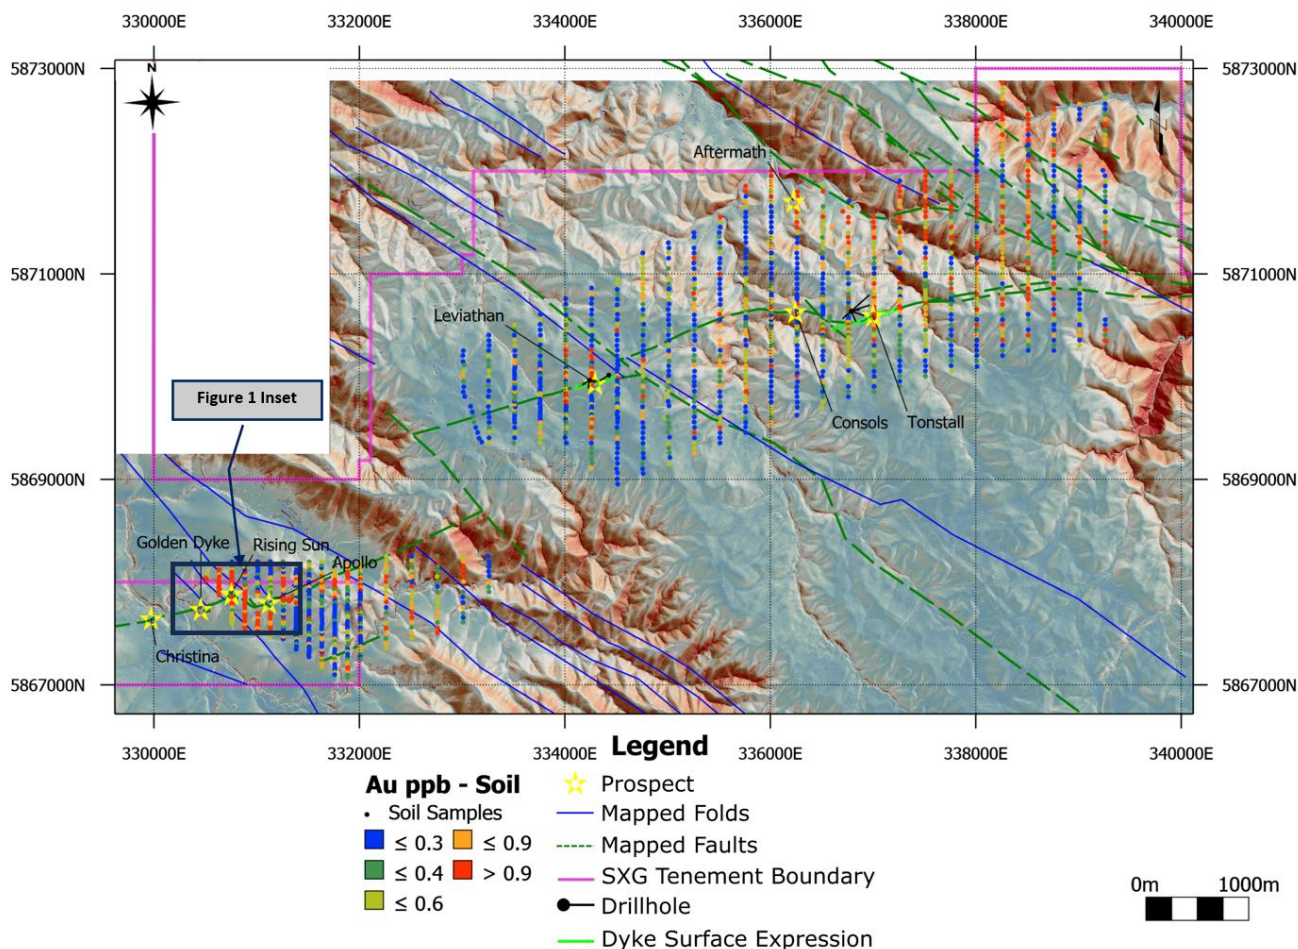

Photo 1: SDDSC066 262.5 m showing a fibrous Pb-Sb sulphosalt, possibly boulangerite ($Pb_5Sb_4S_{11}$), commonly seen as alteration in epizonal systems. Ticks show mm scale.

Photo 2: SDDSC077B from 739.9 m (0.8 m @ 1,741.5 g/t AuEq (1,736.4 g/t Au, 3.3% Sb) showing quartz-carbonate stockwork with visible gold in an altered dyke. Millimetre scale.

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

Consolidated statement of cash flows		Current quarter \$A'000	Year to date (3 months) \$A'000
4.5	Effect of movement in exchange rates on cash held	-	-
4.6	Cash and cash equivalents at end of period	11,745	11,745

5.	Reconciliation of cash and cash equivalents at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts	Current quarter \$A'000	Previous quarter \$A'000
5.1	Bank balances	11,745	15,187
5.2	Call deposits	-	-
5.3	Bank overdrafts	-	-
5.4	Other (provide details)	-	-
5.5	Cash and cash equivalents at end of quarter (should equal item 4.6 above)	11,745	15,187

6.	Payments to related parties of the entity and their associates	Current quarter \$A'000
6.1	Aggregate amount of payments to related parties and their associates included in item 1	(75)
6.2	Aggregate amount of payments to related parties and their associates included in item 2	(37)

Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

7. Financing facilities	Total facility amount at quarter end \$A'000	Amount drawn at quarter end \$A'000
<i>Note: the term "facility" includes all forms of financing arrangements available to the entity.</i>		
<i>Add notes as necessary for an understanding of the sources of finance available to the entity.</i>		
7.1 Loan facilities	-	-
7.2 Credit standby arrangements	-	-
7.3 Other (please specify)	-	-
7.4 Total financing facilities	-	-
7.5 Unused financing facilities available at quarter end		-
7.6 Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		
N/A		

8. Estimated cash available for future operating activities	\$A'000
8.1 Net cash from / (used in) operating activities (item 1.9)	(487)
8.2 (Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	(2,541)
8.3 Total relevant outgoings (item 8.1 + item 8.2)	(3,028)
8.4 Cash and cash equivalents at quarter end (item 4.6)	11,745
8.5 Unused finance facilities available at quarter end (item 7.5)	-
8.6 Total available funding (item 8.4 + item 8.5)	11,745
8.7 Estimated quarters of funding available (item 8.6 divided by item 8.3)	3.88
<i>Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.</i>	
8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A	

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer:

N/A

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

29 September 2023

Date:

The Board of Directors

Authorised by:
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
