

## PERCHERON THERAPEUTICS CORPORATE PRESENTATION

**Melbourne, Australia – 26 February 2024:** Percheron Therapeutics Limited, an international biotechnology company focused on the development of novel therapies for rare diseases, is pleased to provide an updated non-confidential corporate presentation for the information of shareholders and investors.

This presentation supersedes the previous corporate presentation that was released on 28 August 2023.

This updated presentation covers the Company's pipeline and financial position and provides a summary of recent progress. It will be used in various upcoming investor roadshows and shareholder meetings.

~ ENDS ~

---

### About Percheron Therapeutics Limited

Percheron Therapeutics Limited [ASX: PER | US OTC: ATHJY | FSE: AWY] is a publicly listed biotechnology company focused on the development and commercialisation of novel therapies for rare diseases. The company's lead program is ATL1102, an antisense oligonucleotide targeting the CD49d receptor. ATL1102 is currently the subject of an ongoing international phase IIb clinical trial for the treatment of non-ambulant patients with Duchenne Muscular Dystrophy (DMD), for which data is expected in 2H CY2024. The company previously reported promising results from an exploratory phase IIa study of in the same population and has been awarded orphan drug designation (ODD) and rare pediatric disease designation (RPDD) by the US FDA.

For more information, please contact [info@PercheronTx.com](mailto:info@PercheronTx.com).

*This announcement has been authorized for release to the Australian Securities Exchange by the Board of Directors.*

# Forward-Looking Statements

This presentation contains **forward-looking statements** within the meaning of the safe-harbor provisions of the Private Securities Litigation Reform Act of 1995. These statements do not relate strictly to historical or current facts and may be accompanied by words such as ‘could,’ ‘would,’ ‘may,’ ‘potentially,’ ‘suggest,’ ‘believes,’ ‘expects,’ ‘should,’ ‘intends,’ ‘plans,’ ‘forecasts,’ and similar words or expressions.

Such statements involve substantial risks and uncertainties, not all of which may be known at the time. All statements contained in this presentation, other than statements of historical fact, including without limitation statements regarding our strategy, research and development plans, collaborations, future operations, future financial position, future revenues, projected costs, pricing, prospects, plans, and objectives of management, are forward-looking statements. Not all forward-looking statements in this presentation are explicitly identified as such.

The Company does not warrant any of the forward-looking statements in this presentation, and investors are advised to interpret such statements in the context of other available sources of information and with the assistance of expert advisors as appropriate.

Many factors could cause the actual results of the Company to differ materially from the results expressed or implied herein, and you should not place undue reliance on the forward-looking statements. Drug development is inherently risky, and only a small proportion of research and development programs lead to a marketed product. Factors which could change the Company’s expected outcomes include, without limitation, our ability to: advance the development of our programs, and to do so within any timelines that may be indicated herein; the safety and efficacy of our drug development candidates; our ability to replicate experimental data; the ongoing validity of patents covering our drug development candidates, and our freedom to operate under third party intellectual property; our ability to obtain necessary regulatory approvals; our ability to enter into and maintain partnerships, collaborations, and other business relationships necessary to the progression of our drug development candidates; changes in the competitive landscape pertaining to our drug development candidates; the timely availability of necessary capital to pursue our business objectives; changes in the public policy environment in one or more countries in which we operate or may seek to operate which disfavour our business; our ability to attract and retain qualified personnel; changes from anticipated levels of customer acceptance of existing and new products and services; and other factors, including the COVID-19 pandemic and the conflict in Ukraine.

Although the Company believes that the expectations reflected in such forward-looking statements are reasonable, and although they reflect our current views as at the date of this presentation, there can therefore be no assurance that such expectations will prove to be correct. The Company has no obligation as a result of this presentation to pursue any specific strategy or plan outlined herein, or to deliver any specific outcome that may be implied or inferred.

Any forward-looking statements contained in this presentation speak only as of the date this presentation is made, and we expressly disclaim any obligation to update any forward-looking statements, whether because of new information, future events or otherwise, except as may be required by law.

# Percheron Therapeutics (ASX: PER) is a late-clinical stage biotech company, focused on development of novel high-value therapies for orphan diseases

- Lead program is **ATL1102**, an antisense oligonucleotide treatment for **Duchenne muscular dystrophy (DMD)** and other diseases
  - International double-blind, placebo-controlled phase IIb trial ongoing
  - Positive clinical data from prior single-arm phase IIa study
  - Well-validated technology with multiple FDA approved therapies in various conditions
- **ATL1102 is a late-stage asset with substantial commercial opportunity**
  - Approximately 300,000 DMD patients worldwide
  - Existing therapies priced up to US\$ 300K per treatment year; total market estimated at ~US\$ 4B per annum; ~US\$ 10B by 2030
  - ATL1102 potentially applicable to almost all DMD patients, not just those with specific genetic mutations ('mutation agnostic')
  - Potential applications for ATL1102 in other disease areas
- **Percheron enjoys strong corporate fundamentals**
  - Highly-experienced Board and management team
  - Oversubscribed institutional financing of \$8.35M in July 2023, plus Share Purchase Plan proceeds of \$3.26M, leaves the company well funded for ongoing operations
  - Lean, virtual operating model

# Good progress continues to be made on ATL1102, with positive developments in recent months

**Deliver Phase IIb Clinical Trial in DMD**  
*Provide high-quality data to enable partnering, excite new investors, and engage with regulators*

- All five countries open to recruitment
- **Recruitment on track for ~1Q completion**
- No safety concerns identified by DSMB; good engagement from patients and investigators

**Next Milestones**  
 Complete recruitment: 1Q CY2024  
 Data: 2H CY2024

**Complete 9-Month Toxicology Study**  
*Remove impediments to conducting clinical trials and seeking marketing approval in US, thereby de-risking ATL1102*

- **Nine-month dosing period completed in Dec 23**
- **'Recovery period' and pathological analysis ongoing**

**Next Milestones**  
 Final Data: 2H CY2024

**Optimise for Future Regulatory Approval**  
*Identify potential regulatory and manufacturing needs in key markets and advance plans to optimise ATL1102 program*

- New team members recruited in FY2023 with extensive international experience in drug development
- International CRO engaged to review dossier

**Next Milestones**  
 FDA engagement CY2024

**Envisage Potential Expansion**  
*Evaluate opportunities to expand use of ATL1102 within DMD, in other forms of muscular dystrophy, and in other diseases*

- Collaborations have generated new data in DMD (in combination with existing therapies) and in LGMDR2

**Next Milestones**  
 Publication / presentation of combination data and LGMDR2 data  
 CY2024

**Publish Our Data**  
*Share ATL1102's impressive dataset with the world via peer-reviewed journals and scientific conferences*

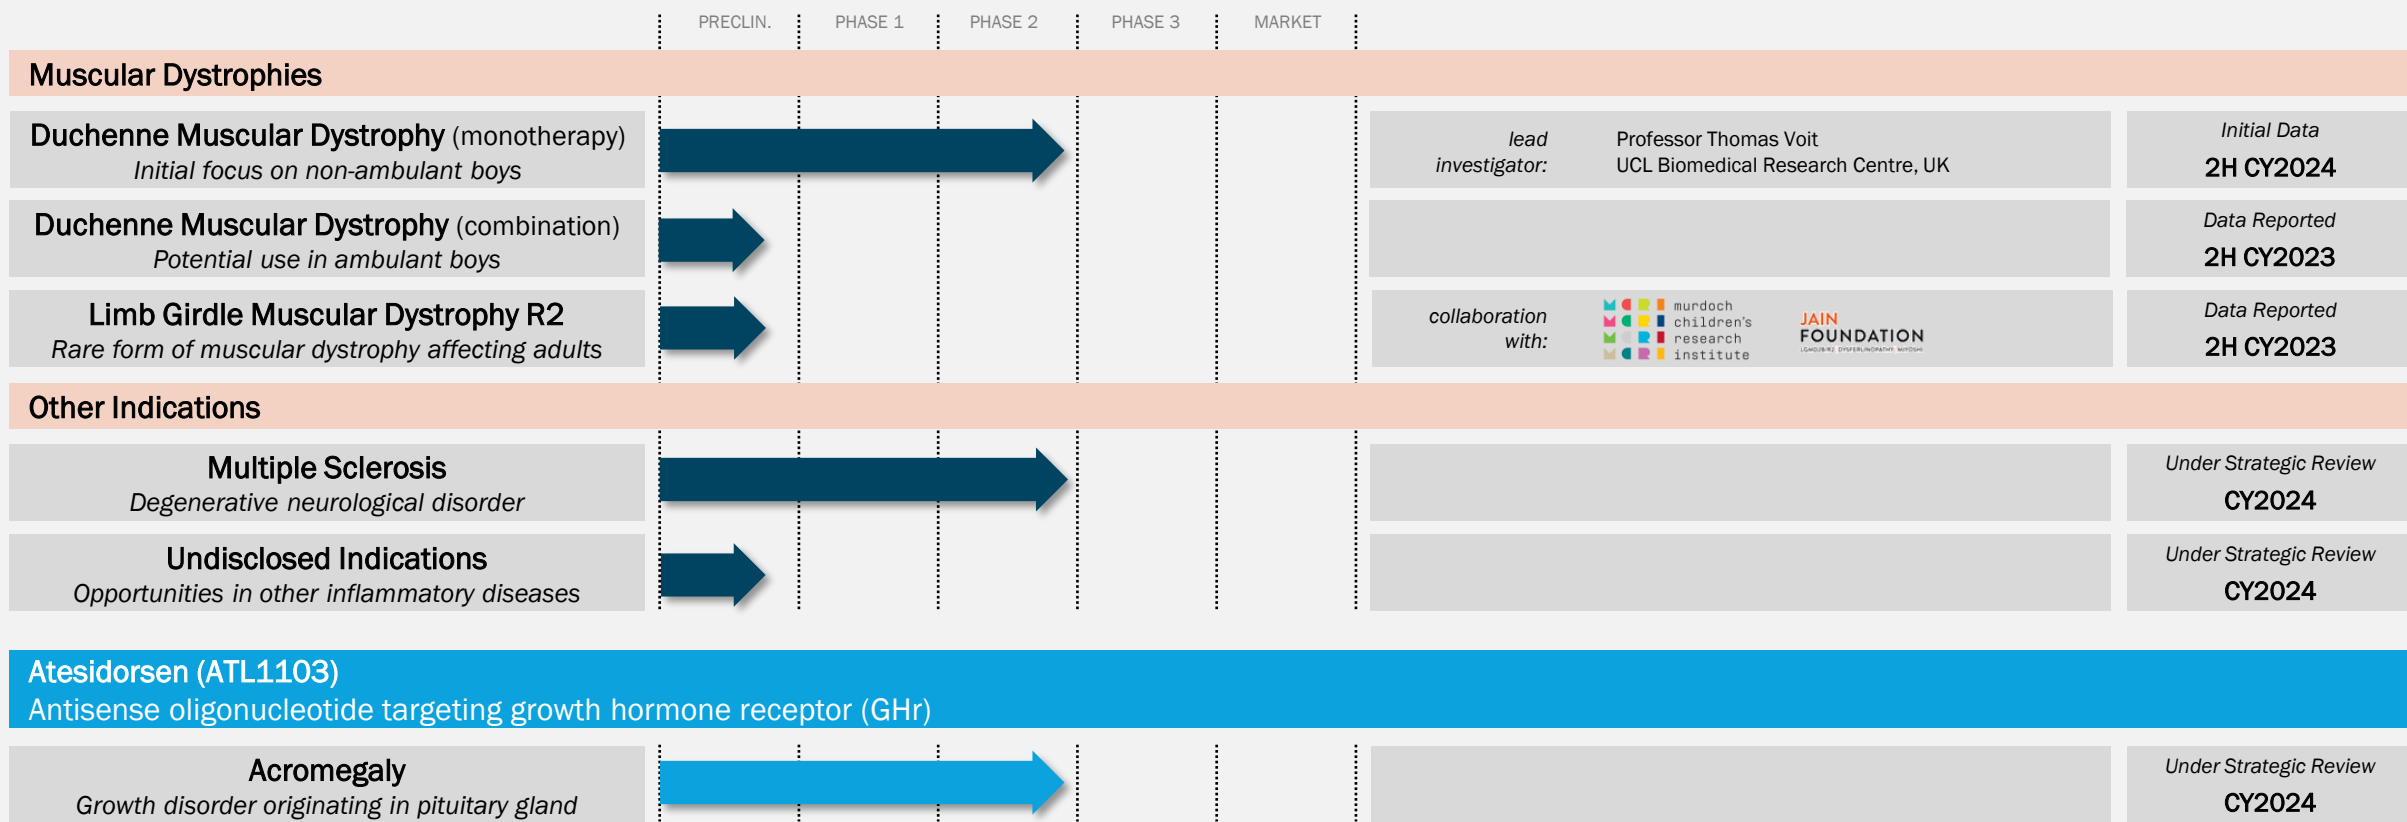

- **Phase IIa data published in PLoS ONE in Jan 24**
- **3x abstracts accepted for MDA Conference in Mar 24**

**Next Milestones**  
 Conference presentations  
 1Q CY2024

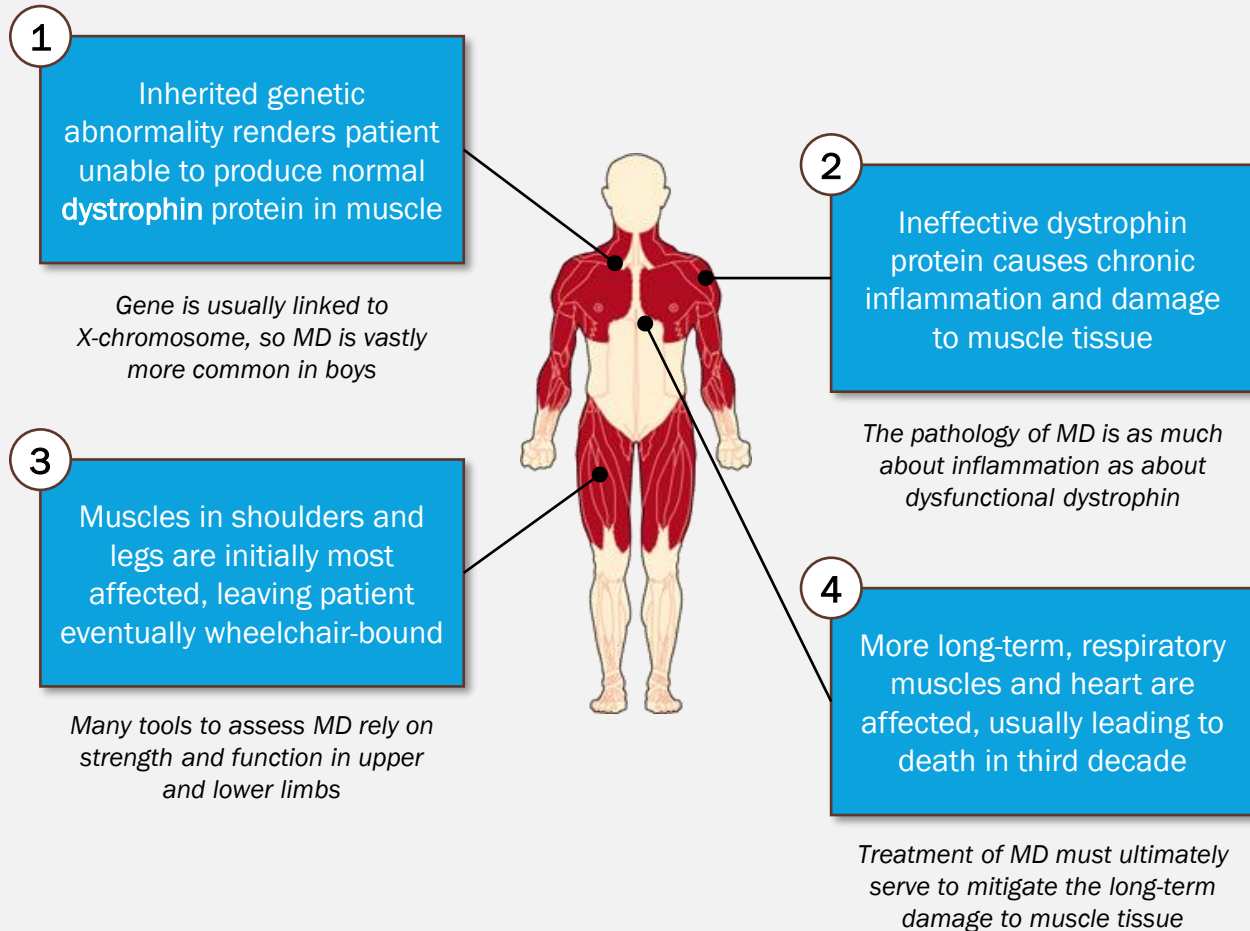

**bold** – new developments since November 2023

# Percheron's pipeline comprises potential first-in-class assets for genetic diseases with high unmet clinical need

## ATL1102 Antisense oligonucleotide targeting CD49d

# Duchenne muscular dystrophy (DMD) is an incurable genetic condition that affects approximately 300,000 children and young adults worldwide

Duchenne muscular dystrophy (DMD) represents <b>~50%</b> of MD cases	Incidence is approximately <b>6 in</b> 100,000 births	DMD also associated with cognitive dysfunction, brittle bones, and other degenerative effects
Usually diagnosed by <b>Age 5</b>	Typically wheelchair-bound by <b>Age 12</b>	Life expectancy <b>20s</b>

# There are two fundamental approaches to the pharmacological treatment of DMD: (1) target the underlying genetic abnormality, and (2) target its effects

1  
Target the underlying genetic abnormality to restore normal dystrophin production

2  
Target the inflammation to reduce muscle damage from abnormal dystrophin

- Most therapies are only applicable to a small proportion of patients
- Some uncertainty around degree of clinical benefit

*Standard of care is primarily corticosteroids, but is evolving to include combination treatment with both dystrophin-restoration therapies and anti-inflammatory therapies, including novel, non-steroid anti-inflammatory therapies*

- Some side effects with older therapies such as prednisone
- Steroids are less effective in patients with high CD49d expression
- Applicable to most or all patients

Corticosteroid therapies

Novel non-steroid therapy

# ATL1102's mechanism of action is well validated and clearly understood, with nine FDA-approved antisense oligonucleotide therapies already available to patients

**1** Ordinarily, the genetic code in a patient's DNA is transcribed to RNA, which is used to direct synthesis of proteins. Aberrant proteins (e.g. dystrophin in DMD) cause disease.

**2** Antisense oligonucleotides (ASOs) are short strands of genetic material (DNA or RNA) which interfere with transcription, or with the translation of RNA to protein, or work to correct protein production, via various mechanisms (shown right).

**3** ATL1102 is an ASO which targets the production of CD49d, a protein involved in inflammation. By blocking synthesis of CD49d, ATL1102 has an anti-inflammatory action, which reduces chronic muscle tissue damage associated with DMD.

## FDA-Approved Antisense Therapies

**EXONDYS 51**  
(eteplirsen) Injection

**VYONDYS 53**  
(golodirsen) Injection

**AMONDYS 45**  
(casimersen) Injection

**Viltepso**  
(viltolarsen) injection

**Tegsedi**  
(inotersen) 200 mg/5 mL injection

**QALSODY**  
(tofersen) 100mg/15 mL injection

**SPINRAZA**  
(nusinersen) 12mg/5 mL injection

**KYNAMRO**  
(mipomersan sodium) injection 200mg/10 mL

**waylivra**  
(volanesorsen) 200 mg/5 mL injection

# ATL1102 has shown compelling evidence of clinical efficacy across multiple validated endpoints in a phase IIa pilot study of 9 non-ambulant boys

Key Study Parameters
<b>Population</b>
Non-ambulant boys with confirmed Duchenne muscular dystrophy, aged 10-18
<b>Sample Size</b>
n = 9
<b>Intervention</b>
ATL1102, 25mg weekly via sc injection for 24 weeks
<b>Primary Endpoint</b>
Safety and tolerability
<b>Secondary Endpoints</b>
Lymphocyte count Upper limb function Upper limb strength Forearm muscle MRI
<b>Location and Timing</b>
Melbourne, Australia 2018 - 2020

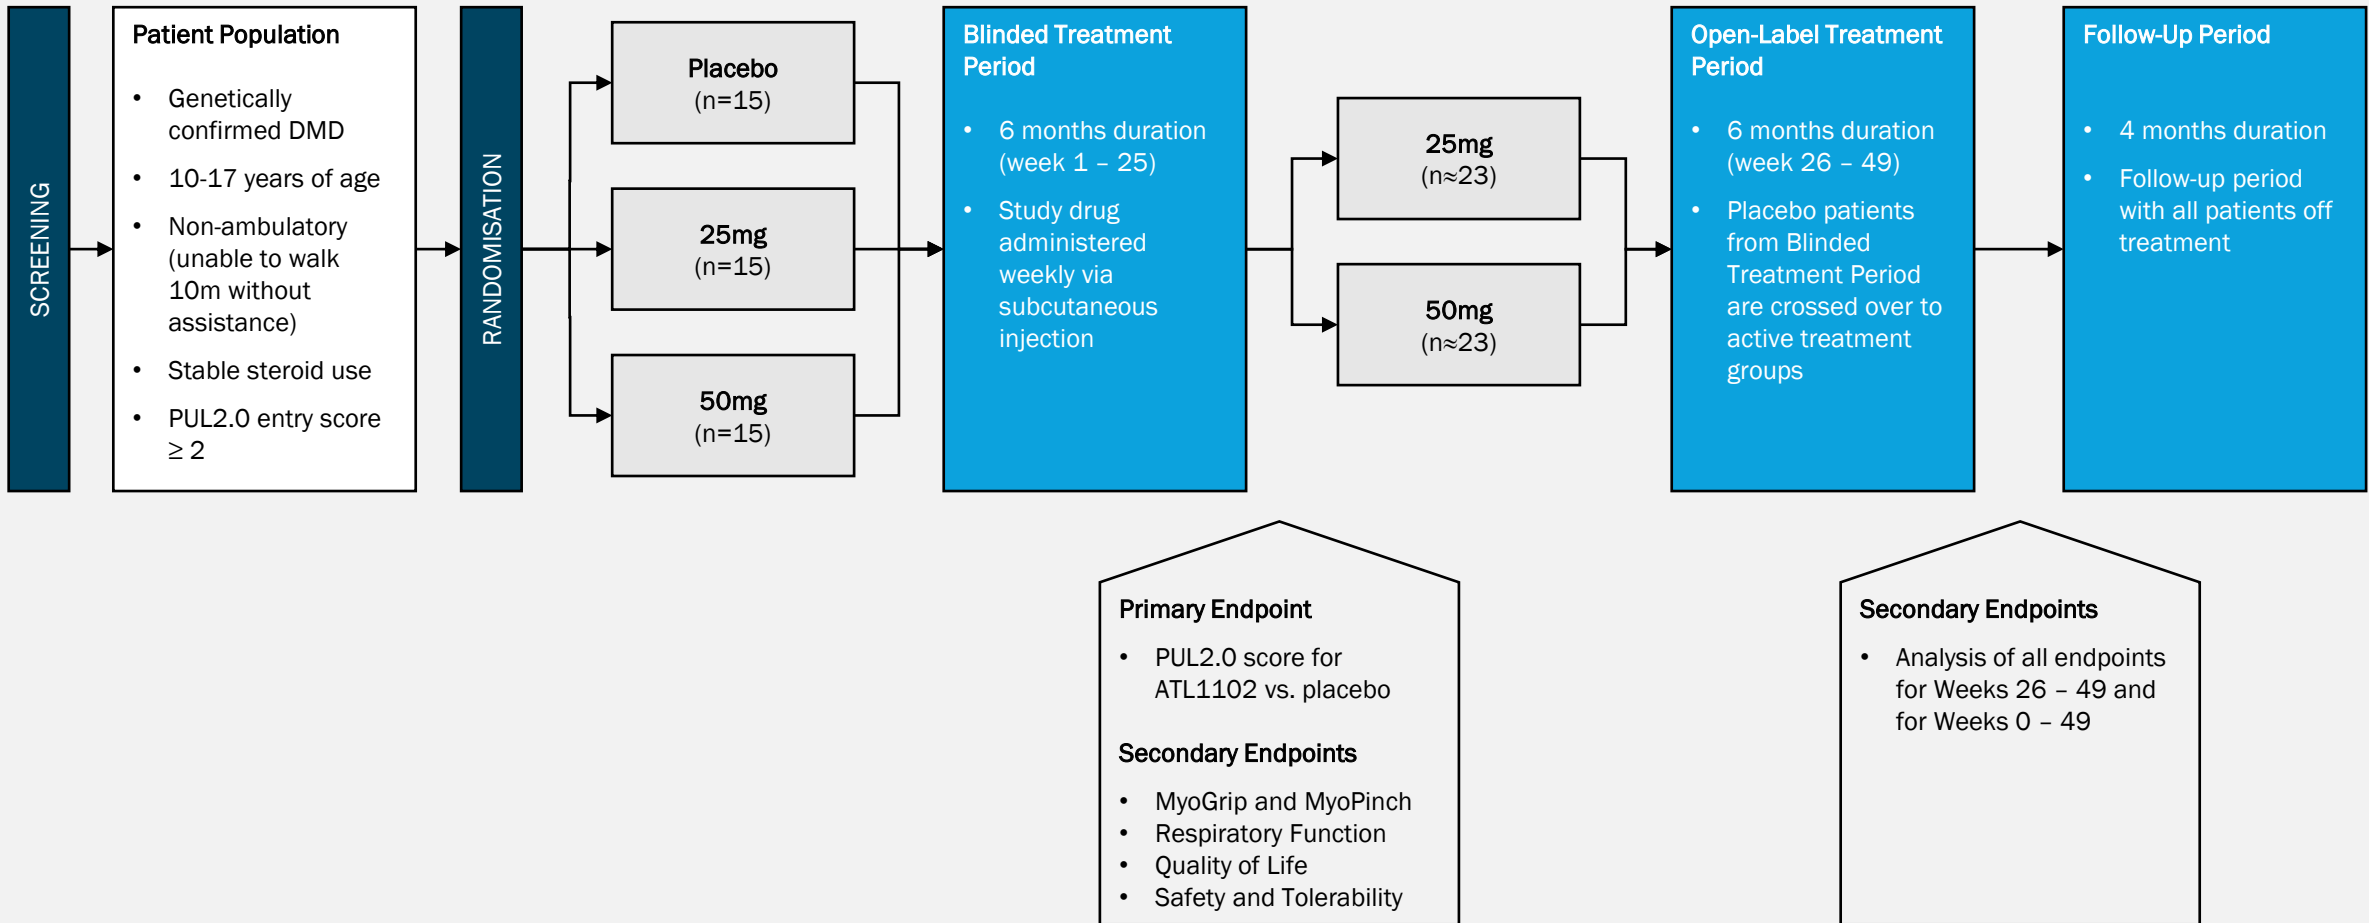

Study Results (Efficacy) [at 6 months]			
Endpoint	Description	ATL1102 Result	Historical Comparator
 <b>PUL2.0</b>	Performance of Upper Limb (PUL2.0) assesses the function of upper body muscles in 3 dimensions	<b>↑ 0.9</b> (-1.33 - 3.11)	<b>↓ 2.0</b> (-2.95 - -1.05)
 <b>MyoGrip</b> (dominant hand)	MyoGrip assesses the clamping force of the fingers	<b>↑ 0.2 kg</b> (-0.25 - 0.67)	<b>↓ 0.5 kg</b> (-1.01 - 0.00)
 <b>MyoPinch</b> (dominant hand)	MyoPinch assesses the pinch strength between thumb and forefinger	<b>→ 0.0 kg</b> (-0.18 - 0.19)	<b>↓ 0.4</b> (-0.53 - -0.22)
 <b>MoviPlate</b> (dominant hand)	MoviPlate assesses the fatigability of forearm muscles but is of uncertain significance in DMD	<b>↑ 1.9</b> (-6.08 - 9.85)	<b>↑ 4.7</b> (2.01 - 7.40)
 <b>MRI - total lean muscle area</b>	Magnetic Resonance Imaging (MRI) is used to assess the amount of fat and lean muscle mass in the forearm	<b>↑ 13.9 mm<sup>2</sup></b> (-72.6 - 100.4)	<b>↓ 32.1 mm<sup>2</sup></b> (-102.6 - 38.1)
 <b>Lymphocyte Counts</b>	Lymphocyte counts measure the ability of ATL1102 to modulate the immune system and reduce inflammation	<b>↓ 0.28 x 10<sup>9</sup> / L</b> (-1.10 - 0.55)	<b>↑ 0.47 x 10<sup>9</sup> / L</b>

Study Results (Safety)
Side effects of ATL1102 limited to non-serious injection site reactions, with no patients requiring withdrawal from treatment

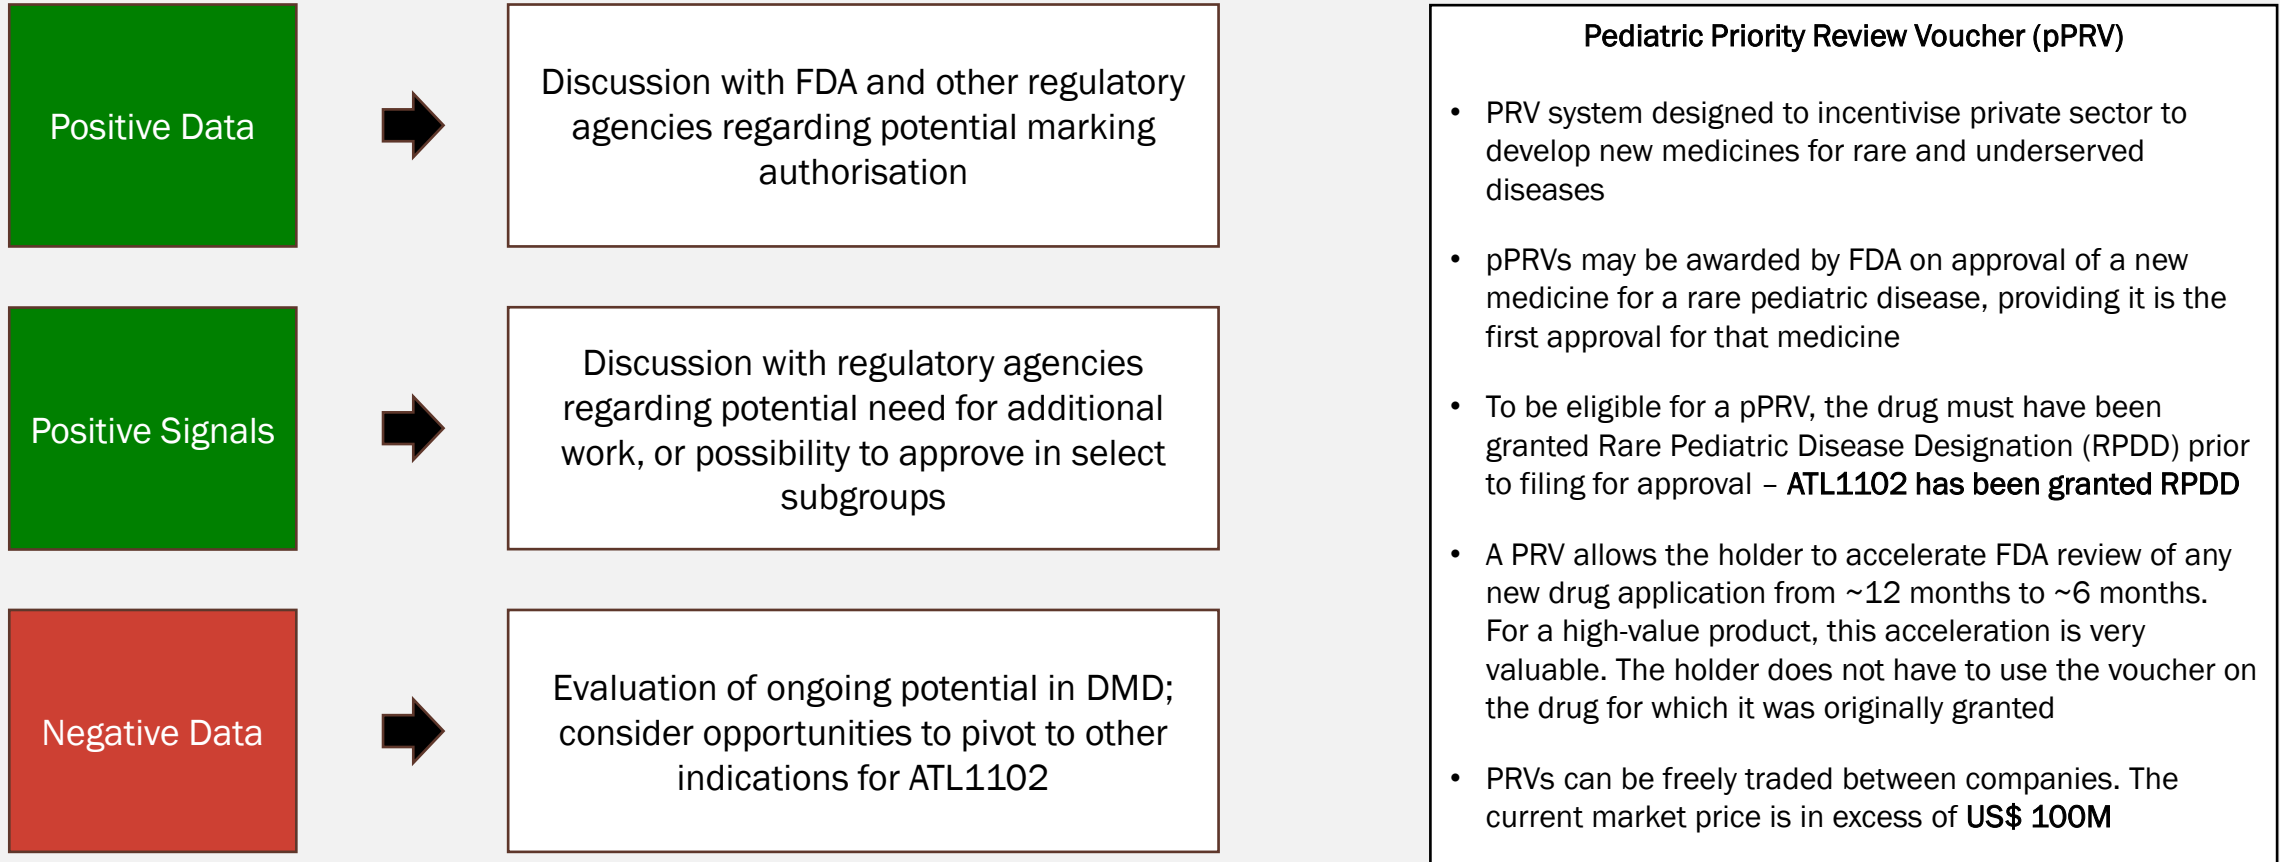

Source: [IR Woodcock et al. \(2024\) PLoS ONE 19\(1\): e0294847](#); [V Ricotti et al. \(2016\) PLoS ONE 11\(9\): e0162542](#); [G Tachas et al. \(2020\) Neuromuscul. Disord. 30\(S1\):S129-130](#)

Note: Comparison between studies is never perfectly like-for-like and functional endpoints would typically require further confirmation in a randomised, placebo-controlled trial

# An ongoing, double-blind phase IIb clinical study has been designed to provide definitive evidence of efficacy for ATL1102 in non-ambulant boys with DMD

# Six-month data from the ongoing phase IIb trial of ATL1102 will define the likely path to market for the drug

# The commercial opportunity in DMD is substantial, with a potential market size of ~US\$ 4 billion, reflecting favourable pricing dynamics

## Comparator Revenues (2021-22)

Company	Product	2022 (US\$)	2021 (US\$)
 SAREPTA THERAPEUTICS	 EXONDYS 51 (eteplirsen) Injection	512M	454M
 SAREPTA THERAPEUTICS	 AMONDYS 45 (casimersen) Injection	215M	69M
 SAREPTA THERAPEUTICS	 VYONDYS 53 (golodirsen) Injection	117M	90M
 PTC THERAPEUTICS	 Emflaza <sup>®</sup> (deflazacort)	218M	187M
 PTC THERAPEUTICS	 translarna <sup>®</sup> a taluren	289M	236M
 NS Pharma	 Viltepso (vitilarsen) injection	109M	56M

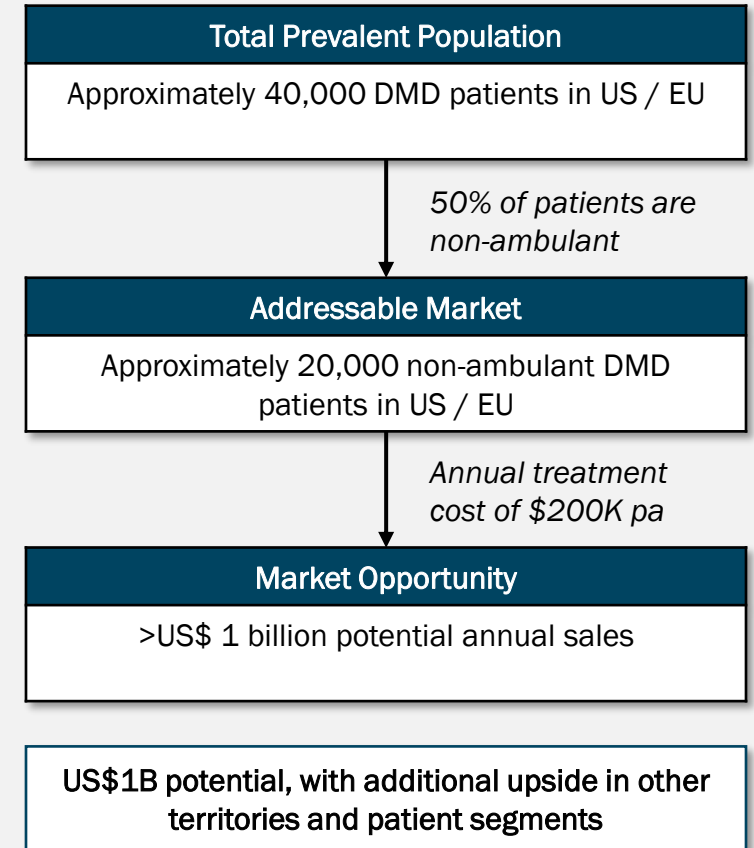

~\$1.5B in annual sales at 34% growth YoY

## Comparator Pricing

Company	Product	Annual Cost (US\$)
 SAREPTA THERAPEUTICS	 EXONDYS 51 (eteplirsen) Injection	~\$750K
 SAREPTA THERAPEUTICS	 AMONDYS 45 (casimersen) Injection	~\$750K
 SAREPTA THERAPEUTICS	 VYONDYS 53 (golodirsen) Injection	~\$750K
 PTC THERAPEUTICS	 Emflaza <sup>®</sup> (deflazacort)	~\$100K
 SAREPTA THERAPEUTICS	 Elevidys (delandistrogene moxeparovec-rokl)	~\$3.2M

Conservatively anticipate ATL1102 pricing at ~\$200K per patient per year

## ATL1102 Commercial Opportunity

US\$1B potential, with additional upside in other territories and patient segments

Source: company SEC filings; news reports; Percheron Therapeutics analysis

# The competitive landscape in DMD is not crowded, and most companies have focused on dystrophin-restoration therapies rather than anti-inflammatory approaches

	Early Development	Late Development	Approved
<b>Exon-Skipping Therapies</b>  <i>ESTs use antisense oligonucleotides (ASOs) to help cells skip dysfunctional genetic code during transcription, yielding dystrophin which more closely resembles normal</i>			
<b>Other Genetic Approaches</b>  <i>Gene therapies and other ASO approaches attempt to restore production of (approximately) normal dystrophin</i>			
<b>Anti-Inflammatory and anti-Fibrotic Therapies</b>  <i>Anti-inflammatory therapies seek to reduce the damage caused to muscle tissue by dysfunctional dystrophin</i>			

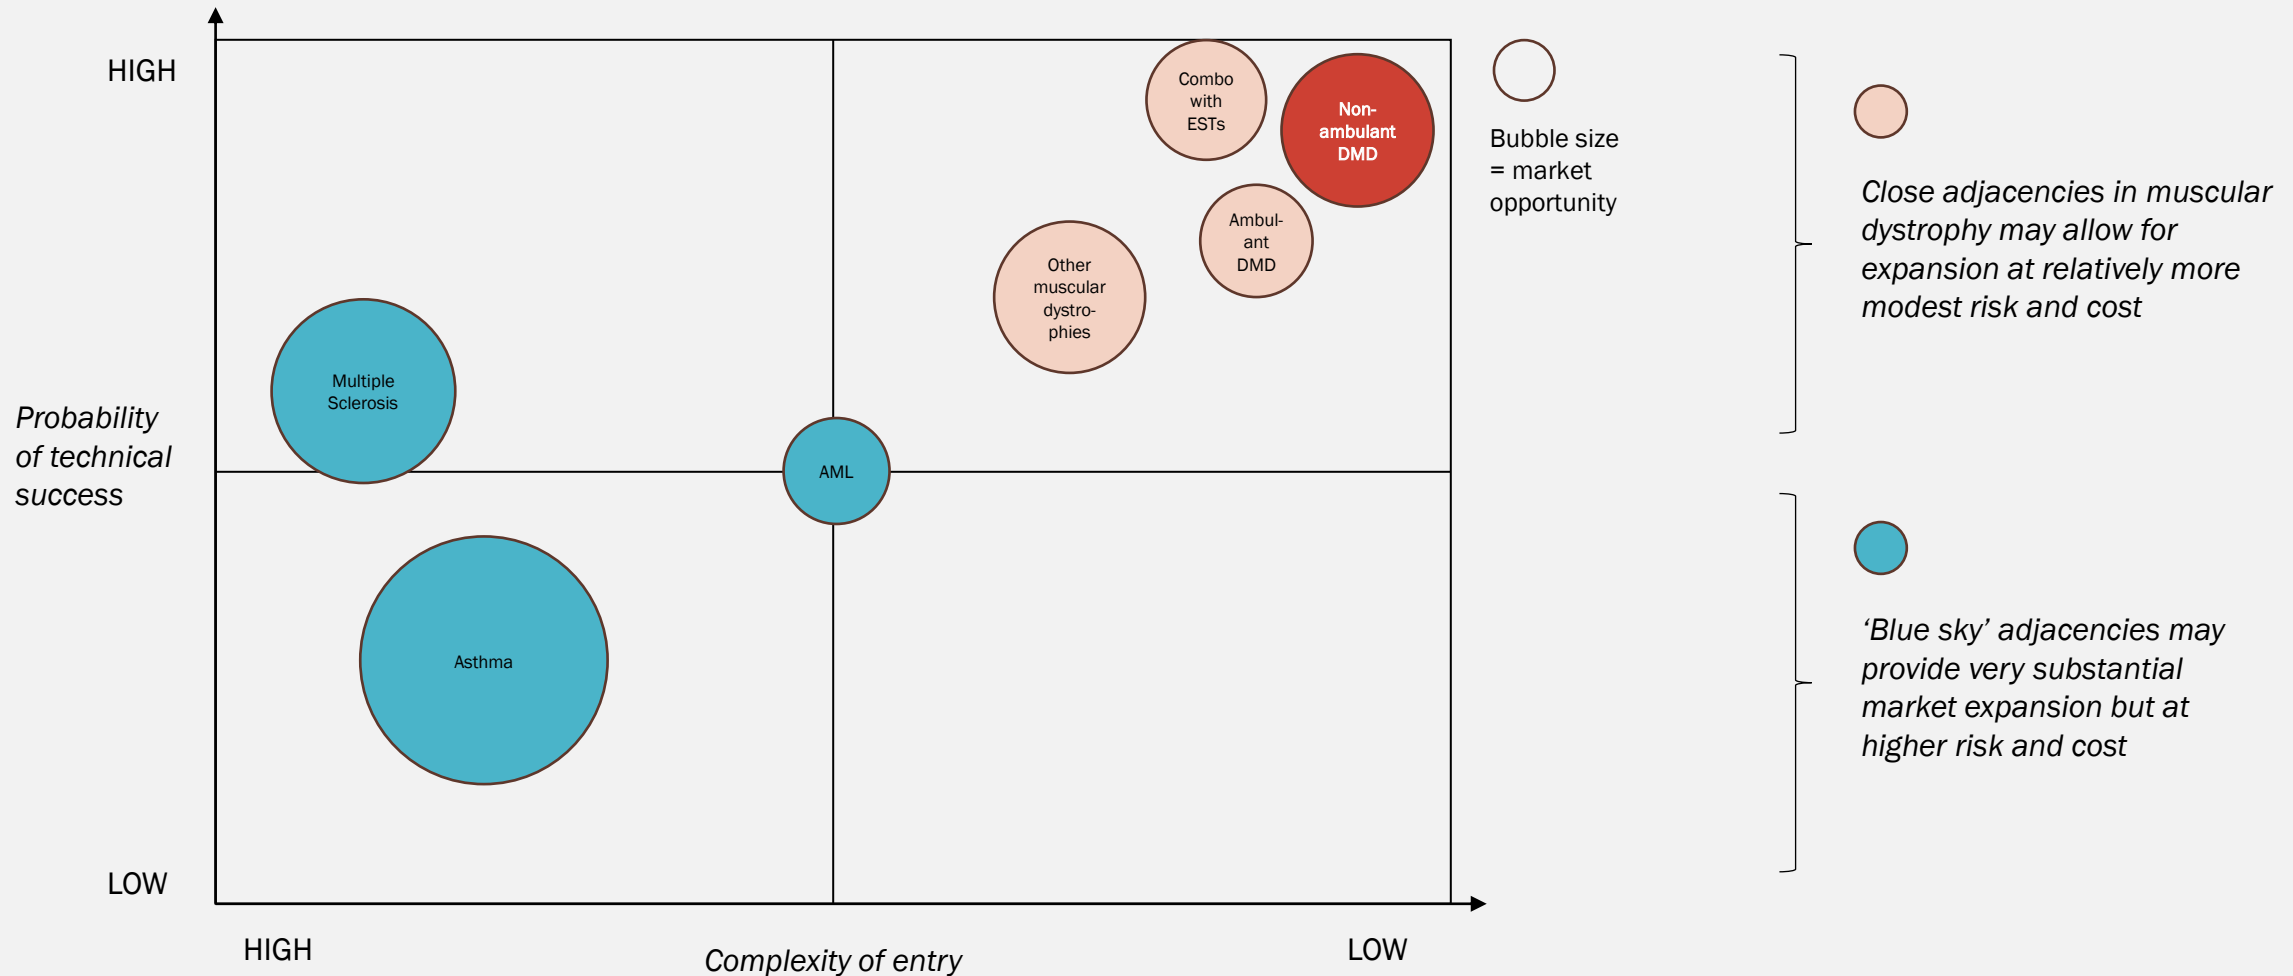

ESTs are only suitable for patients with specific genetic mutations, accounting for a small proportion of total:-

Exondys 51	14%
Amondys 45	8%
Vyondys 53	8%
Viltepso	8%

Elevidys, the first gene therapy approved in DMD, is only indicated for boys 4-5 years of age, and costs US\$ 3.2 million

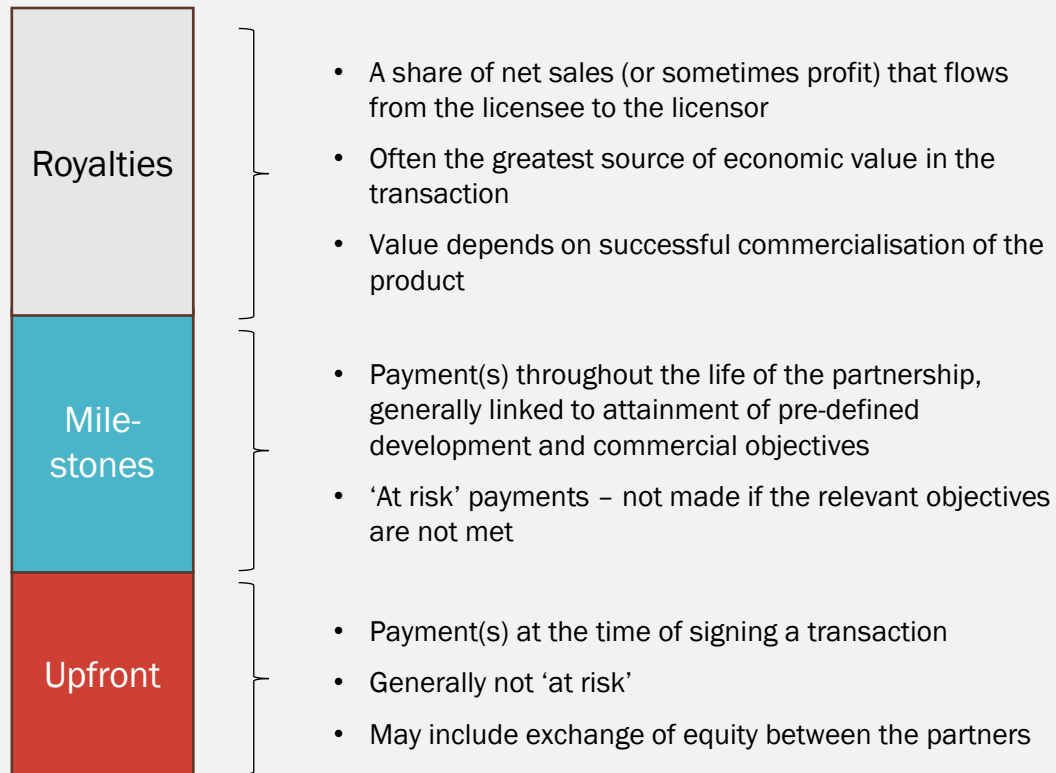

Following failure of Fibrogen’s pamrevlumab in non-ambulant patients in June 2023, and in ambulant patients in September 2023, **ATL1102** is one of the only anti-inflammatory therapies in late-stage development for non-ambulant

Although focus is on non-ambulant DMD patients for now, there is rich opportunity to expand the use of ATL1102 beyond this patient population

# The company has initiated a broad outreach program to identify and cultivate potential future partners for ATL1102

## Illustrative Composition of Typical Pharma Partnering Transactions

## Benchmarks for Phase II Rare Disease Partnering Transactions (2016 – 2023) (n=47)

	Low	Median	High
Upfront Cash (US\$ M)	1	18	900
Milestones (US\$ M)	3	200	1,700
Royalties	9%	15%	40%

*The ability and commitment of a partner to develop and commercialise the product can be at least as important as the economic terms*

Source: DealForma; Antisense analysis

# Partnering opportunity for ATL1102 is substantial, with benchmark transactions suggesting opportunity for significant value realisation
