WEIGHT BEARING CT

WEIGHT BEARING CT OVERVIEW

- ✓ **Quicker and easier** to scan than traditional CT and MRI, with faster image acquisition time
- ✓ **High resolution and 3D visualisation** enables development of new **AI based assessment tools**
- ✓ **Radiation dose lower** than traditional CT – up to 66% less than traditional CT
- ✓ **Smaller and lower-cost hardware** requiring limited radiation shielding infrastructure
- ✓ **Improves patient workflow in a group practice setting** while creating CT revenue

Hip to Foot in standing 3D

HiRise is the first product capable of WBCT of hip to foot in standing 3D

Weight bearing imaging key to accurate diagnosis

WBCT provides unique alignment data required to accurately assess bone positioning under standing load

Serves more applications

The HiRise™ serves various orthopaedic sub-specialties in total knee, hip and ankle replacement planning in addition to implant manufacturers and 3D printed solution providers

HIRISE IN ACTION (VIDEO)

AI MODULES WILL TARGET SUBSCRIPTION BASED SAAS

CubeVue AutoMetrics aims to reduce hours of surgeon time for pre-surgical planning to a scan available in 15 minutes

APPLICATIONS

- Suspected hip, knee and ankle fractures
- Suspected osteoarthritis
- Bunions/Bunion correction
- AAFD reconstructions
- Joint replacements
- Charcot foot reconstruction
- High ankle sprain
- Lisfranc Injuries

THE PROBLEM

- Orthopaedic pre-treatment planning involves understanding of the structure and alignment of the foot – 26 bones & 33 joints
- To segment the bones in the foot and accurately assess bone geometry & alignment requires ~6 hours of manual effort
- Typically, surgeons will make crude manual measurements on 2D radiographs
- No reimbursement in place at this point
- Need standardised and objective results

THE SOLUTION

CurveBeam AI DLAI model aids in bone segmentation for accurately identifying key anatomical points

- Working 3D model with measurements in minutes for surgeons
- WBCT images drive improvements in accuracy & consistency
- CBAI has several key patents awarded in DLAI & non-AI for bone segmentation
- Targeting this IP for a platform solution for other CT modalities, in addition to WBCT (B2B)
- FDA filing expected in FY2025

STRONG INVESTMENT PROPOSITION FOR SURGEONS

Targeting existing reimbursement codes - creates an attractive financial model

- The average Medicare reimbursement rate for scans of the lower extremity CPT code relevant to the HiRise™, pedCAT™ and LineUP™ was US\$138.77 per scan in 2022
- With an initial capital cost of US\$410,000 and assuming 10 scans per day, the payback period for a HiRise™ (excluding costs) is 1 year and 5 months
- If financed under a lease with an interest rate of 9%, the breakeven number of scans required to pay the machine off over a 5-year term is 2.83 scans per day (excluding costs)

Atlantic Orthopaedic Specialists, Virginia Beach, VA

Actual CurveBeam Customer – PedCat

Device up front cost: \$179,000

Volume: 35 scans per month

Breakeven: 17 scans/month

Reimbursement range: \$99.74 to \$294.3¹

Average reimbursement: \$242.11

Gross revenue / month: \$7,014.08

Device payback period of 2.5 years

1. US Payment and coverage varies extensively city to city, state to state and this example represents a specific model for a specific region of the US market

REGULATORY & REIMBURSEMENT OVERVIEW

Over 10 years of regulatory and clinical development and clearances underpin CurveBeam AI's industry leading position

Favourable reimbursement in US & Germany (CT only)	<ul style="list-style-type: none">• Targeting favourable reimbursement¹ for CT scans (US/Germany/Australia/NZ) through existing CT CPT Codes & Payer Coverage• Targeting favourable reimbursement for BMD CT off HiRise (hip & knee surgeries) for US only – once BMD CT SaaS product FDA cleared
Clinical development	<ul style="list-style-type: none">• Extensive peer reviewed publications on Weight Bearing CT• Over 10 years of clinical validation in bone fragility diagnostics using bone microstructure analysis• 2,000-woman, 8-year prospective study, to clinical end point of fragility fracture

1. 'Favourable' reimbursement is defined as where reimbursement is targeting existing codes/coverage and achieving enough reimbursed scans to pay for the device placement through a typical 4-to-5-year lease

Next Generation WBCT Platform: SKYRISE™

- SkyRise targets scans for dynamic structural detail about spinal alignment, joint orientation and supporting muscles. With future bone density & microstructure measures for better planning
- AI will target vertebrae with anatomical landmark recognition – to optimise right site & trajectory
- Longer term SkyRise will introduce a patented dual imaging capability to optimise assessment of soft & hard tissue – detail for paraspinal muscles (PSM) and thoracolumbar spine muscles
- SkyRise targets lumbar and cervical spine through a weight bearing (WB) and non-WB position. Both scans used to aid surgical decisions by assessing spinal stability and improved detail around occult back and leg pain
