## JORC Code

It is a requirement of the ASX Listing Rules that the reporting of (amongst other things) exploration results and mineral resources in Australia comply with the 2012 edition of the Joint Ore Reserves Committee's Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (**JORC Code**). Investors outside Australia should note that while mineral resource estimates of St Barbara in this Presentation comply with the JORC Code (such JORC Code mineral resources being **Mineral Resources**), they may not comply with the relevant guidelines in other countries and, in particular, do not comply with (i) National Instrument 43-101 (Standards of Disclosure for Mineral Projects) of the Canadian Securities Administrators (the **Canadian NI 43-101 Standards**); or (ii) Item 1300 of Regulation SK, which governs disclosures of mineral reserves in registration statements filed with the SEC. Information contained in this Presentation describing mineral deposits may not be comparable to similar information made public by companies subject to the reporting and disclosure requirements of Canadian or US securities laws. You should not assume that quantities reported as "resources" will be converted to reserves under the JORC Code or any other reporting regime or that St Barbara will be able to legally and economically extract them.

# Simberi – FY25 Resource & Exploration Drilling

- An interpreted diatreme breccia model has been developed, the outer margin forming a 1.7 to 2.2 km diameter oval
- In three dimensions, the breccia body forms an ‘inverted cone’ geometry with the base dipping moderate to shallowly inwards towards the centre
- Most of the gold mineralisation dips sub-parallel to the breccia margin, moderate to shallowly inwards towards the centre
- Resource definition and exploration drilling has continued into FY25 and includes 9,000 m of diamond ± reverse circulation drilling
- Drilling targets are Sorowar-Pigiput trend, Samat, Sorowar-Pigibo trend and Pigibo North

# Simberi – FY25 Resource & Exploration Drilling

- The 3D model looking down towards the northeast. Current gold mineralisation >0.6 g/t Au intersected in drilling is displayed in red
- The locations of pit shells are displayed as well as the location of the interpreted margin to the main diatreme breccia
