

## **UPDATE - HIGH-GRADE ANTIMONY PROJECT AT YALLALONG**

---

### **Highlights**

- **POW's (Program of Work) applications covering the 4 priority antimony targets at Yallalong have been approved.**
  - **Approval covers the exploration and planned drilling of the priority antimony targets.**
  - **Geological fieldwork including mapping and rock chip sampling is underway.**
  - **Heritage discussions are in progress, with the relevant landholder groups to clear the path for drilling to commence.**
- 

Octava Minerals Ltd (ASX:**OCT**) ("**Octava**" or the "**Company**"), a Western Australia focused explorer of new energy metals is pleased to report that it has received approvals for its Program of Work (POW) applications covering the antimony prospects at the Yallalong Project from the Western Australian Department of Mines, Industry, Regulation & Safety (DMIRS) and the commencement of on ground fieldwork.

The Yallalong project is located ~ 220km to the northeast of the port town of Geraldton in Western Australia and comprises two granted Exploration Licences, E70/5051 (100% owned) with an exploration area of 63.4km<sup>2</sup> and E09/2823 (100% owned) with an exploration area of 94km<sup>2</sup>.

Antimony mineralisation at Yallalong is associated with stockwork quartz veined zones within sheared fine grained sedimentary rocks peripheral to mafic intrusive dykes within the larger shear zone. The association of antimony mineralisation with major fault systems and sedimentary host rocks is a well known geological setting for a number of antimony deposits worldwide.

The Octava exploration team has commenced on ground field work with initial focus being geological mapping and rock chip sampling on the 4 identified priority targets within the antimony corridor.

**Office Address**  
159 Stirling Hwy  
Nedlands, WA, 6009
