MELBOURNE, AUSTRALIA, 16 October, 2024: Ovarian cancer diagnostics company, Cleo Diagnostics Limited (ASX:COV) (CLEO, or the Company) is pleased to provide the market with an update on activities in the September 2024 quarter as it develops its simple and accurate blood test for the early detection of ovarian cancer.

### Commencement of U.S. Clinical Trials

CLEO's pivotal FDA-enabling clinical trial has commenced in the United States, with first patients recruited into the study. The trial is designed to benchmark CLEO's technology, with recruitment targeting a minimum of 500 patients with diversity representative of the U.S. population. The data collected will underpin a submission to the Food and Drug Administration (FDA) seeking approval for clinical use of CLEO's ovarian cancer detection blood test in the world's largest diagnostic market.

Eight participating medical institutions, located across 6 U.S. states, are recruiting patients. Eligible patients at these sites will be identified by their primary physician and given the opportunity to participate during their consultation. Additional sites may also be included as the trial progresses.

CLEO's clinical trial design was reviewed and approved in both the U.S. and Australia. Institutional Review Board (IRB) approval is a legal requirement for any clinical trial, to ensure trial activities are ethically sound and compliant with federal regulations.

### Australian Clinical Trials

Human Research Ethics Committee Approval (HREC) was obtained for a similar trial design to be conducted in Australia. Whilst the U.S. arm will provide the full complement of samples for CLEO's FDA application, any supplementary samples obtained locally will be used to further refine CLEO's technology and test algorithms prior to commercial launch.

## Commencement of U.S. Regulatory Process

An initial pre-submission meeting was held with the U.S. Food and Drug Administration (**FDA**) where the Company outlined its submission framework and clinical plan for its ovarian cancer detection blood test. The pre-submission meeting is designed to permit CLEO to receive early guidance from FDA review teams prior to an eventual application submission.

The meeting was interactive with the FDA providing constructive and positive feedback on CLEO's approach to obtaining regulatory approval in the U.S. for its ovarian cancer detection blood test. This outcome provides confidence that CLEO's clinical trial designs and strategic direction are appropriately aligned with FDA requirements.

Early interaction with the FDA is important as a part of CLEO's U.S. market access strategy for a number of reasons, as the guidance outcomes allow CLEO to:

- Refine its clinical trial design to maximise resourcing and quality of data;
- Reduce the possibility of rework;
- Shorten the potential timeframe to application submission; and
- Operate with an open and transparent approach.

CLEO is pursuing expedited FDA approval for its first ovarian cancer detection product - the pre-surgical Triage test - via the 510(k) application pathway. This approach provides the quickest pathway to achieve regulatory approval for devices that achieve "substantial equivalence" to an existing predicate.

## Market Activities

CLEO supported various initiatives during September for Gynaecological Cancer Awareness Month. The Company also noted that U.S. President Biden released a proclamation for September as National Ovarian Cancer Awareness Month to further highlight the importance for a reliable method for asymptomatic screening and detection. The Presidential brief can be access at this link: <https://bit.ly/3Z8QoZ6>

## CORPORATE

The Company had cash reserves of A\$8.3M as at 30 September 2024.

#### About Cleo Diagnostics Ltd ASX:COV

CleoDX aims to bring to market a simple blood test for the accurate and early diagnosis of ovarian cancer based on the novel patented CXCL10 biomarker, which is produced early and at high levels by ovarian cancers but is largely absent in non-malignant disease. The test aims to distinguish benign from malignant growths in a standard format that will be readily compatible with existing equipment used by diagnostic laboratories worldwide.

The platform is backed by over 10 years of scientific Research & Development at the Hudson Institute of Medical Research, with two clinical studies conducted with over 500 patients. Pursuant to a licence agreement with the Hudson Institute of Medical Research, Cleo has a worldwide exclusive licence to commercialise the intellectual property which underpins its operations and the ovarian cancer tests.

The clinical unmet worldwide need is urgent. An accurate and early detection blood test could shift survivability for ovarian cancer significantly as seen with other cancers. Cleo is advancing the availability of its simple blood test, under a modular execution strategy which is designed to eventually address all ovarian cancer detection markets with specific tests including surgical triage, recurrence, high risk, and early-stage screening.
