

UNLOCKING GLOBAL MARKET POTENTIAL IN FERTILITY & DIAGNOSTIC INNOVATION

FEBRUARY 2025

DISCLAIMER

This presentation is not and does not form part of any offer, invitation or recommendation in respect of securities. Any decision to buy or sell Memphasys securities or other products should be made only after seeking appropriate financial advice. Reliance should not be placed on information or opinions contained in this presentation and subject only to any legal obligation to do so, the Company does not accept any obligation to correct or update them.

This presentation does not take into consideration the investment objectives, financial situation or particular needs of any particular investor.

To the fullest extent permitted by law, Memphasys and its affiliates and their respective officers, directors, employees, agents and advisors, accept no responsibility for any information provided in this presentation, including any forward-looking information, and disclaim and liability whatsoever (including for negligence) for any loss howsoever arising from any use of this presentation or reliance on anything contained in or omitted from it or otherwise arising in connection with this presentation.

This presentation provides indicative timelines for various product development and commercialisation activities. These timelines are based on best current estimates, which are subject to change.

All amounts in this presentation are in Australian Dollars (AUD) unless specifically stated otherwise.

The Board has approved these presentation materials.

PROBLEMS MEMPHASYS IS ADDRESSING

Reproductive Health is a growing and global issue.

- Memphasys technology solutions based on science, are globally leading and address the following issues:
 - Male infertility solutions for **improving** sperm quality
 - **Improvement in efficacy** of IVF processes in humans and animals
 - **Improvement of storage of sperm** to stop DNA breakdown
 - The RoXsta[™] system so that conditions can be treated to avoid serious metabolic imbalances. allows for the rapid and accurate measurement of oxidative and reductive stress
 - Our technology **solutions apply to both** human and select animals (horses and cattle)

WHY INVEST IN MEMPHASYS?

Cutting-Edge, Market-Ready Technologies

Felix[™] and RoXsta[™] address significant gaps in reproductive health and oxidative stress diagnostics.

Strategic Partnerships Enabling Global Reach

Agreements with Vitrolife and Heranova to accelerate international expansion.

Proprietary IP & Strong Competitive Advantage

Patented bio-separation and oxidative stress measurement technology provide a robust market position.

Sustainable & Scalable Revenue Model

Recurring income from singleuse consumables, licensing agreements, and commercial distribution partnerships.

Rapidly Expanding IVF & Diagnostic Markets

The global fertility sector is valued at **USD 30B+**, while oxidative stress diagnostics present a multibillion-dollar growth opportunity.

2025: A Transformational Year

Seeking key regulatory approvals, commercialisation of Felix[™] and RoXsta[™], and strategic partnerships supporting substantial revenue growth.

A GLOBAL ISSUE -LARGE ADDRESSABLE MARKET

Global fertility decreasing – males account for ~50%

- I in 6 couples experience fertility issues
- Sperm dysfunction is the single most common cause of infertility
 - Little progress in sperm processing for ART in over 40 years
 - Sperm counts decreasing
 - Sperm <u>DNA Damage</u> via <u>Oxidative Stress</u> are major contributors
 - Solutions to identify oxidative stress and DNA damage are desperately needed
 - Solutions to quickly select high quality sperm are desperately needed

Average total fertility rate

Assisted human reproduction market size -globally

TECHNOLOGY OVERVIEW

Felix[™] System – A New Standard in Sperm Selection for IVF

Felix[™] is a cutting-edge sperm separation technology that optimises sperm selection for assisted reproductive treatments. Using **electrophoresis and proprietary size-exclusion membranes**, the system efficiently isolates **high-quality sperm while minimising DNA fragmentation and oxidative stress**. This enhances fertilisation outcomes compared to conventional methods. The **automated**, **single-use cartridge design** ensures a consistent and standardised process for IVF clinics globally.

Key Differentiators:

Rapid processing (6

minutes vs. 30-60 minutes compared to conventional methods) Rapid process time (6min) reduces exposure to oxidative stress, **improving sperm quality** yielding sperm with **reduced DNA fragmentation**

Irrespective of the operator Felix is easy to use **providing enhanced consistency and laboratory efficiency**

Recurring revenue model through single-use cartridges

TECHNOLOGY OVERVIEW

<u>RoXsta[™] System</u> – Transforming Oxidative Stress Diagnostics

RoXsta™ is an innovative **six-minute** oxidative stress measurement *system*, *tackling a key factor in male* infertility, cardiovascular disease, and livestock health. Designed for application in **human reproductive** medicine and clinical diagnostics, *RoXsta™ provides rapid and precise* oxidative stress profiling, enabling targeted treatments and improved health outcomes.

Key Differentiators:

Expect to be **first in** market point of care rapid clinical diagnostic

Provides **results in just six minutes** – a fraction of the time required by traditional oxidative stress tests

Applicable across human, veterinary, and multiple industries, opening new revenue streams

Supports personalised treatment plans in fertility and broader health diagnostics

Potential to enhance livestock fertility and productivity through targeted interventions

CLINICAL TRIAL FINALISATION & MARKET IMPACT

Initial results set for public release this

quarter, to be shared with commercial partners and potential licensees

Pivotal clinical trial

completed in partnership with Monash IVF, with data collection finalised in December 2024

FelixTM System Clinical Trial – Commercial Validation

Clinical Trial findings expected to validate Felix[™] as a safe, effective, and faster sperm selection technology than traditional methods If results reaffirm previous positive studies, sales to existing partners expected to scale rapidly

CLINICAL TRIAL FINALISATION & MARKET IMPACT

Strategic Commercialisation & Market Entry

Regulatory planning underway for CE Mark (Europe), TGA (Australia), CDSCO (India), FDA (USA) and NMPA (China)

Heranova Lifesciences partnership driving market entry into Greater China, with planned clinical validation and regulatory approvals.

footprint in the Middle East's growing fertility

First Felix[™] order received in the **UAE**, advancing Memphasys'

sector.

Initial commercial adoption in Japan, Canada, and New Zealand via Vitrolif e Group, a world leader in ART distribution.

Once registration is achieved **a market** in India identified

at several large prestigious IVF clinics – adoption and market entry will be quick.

GLOBAL EXPANSION & COMMERCIAL TRACTION - 1

China Expansion – Strategic Partnership with Heranova

- China represents 33% of the global market*
- China's IVF market was valued at USD 5.37B in 2023, projected to grow to USD 9.04B by 2030.
- LOI signed with Heranova Lifesciences in December 2024 to spearhead Felix[™] System distribution/licencing in China.
- Heranova conducting initial clinical evaluations, setting the stage for broader adoption and regulatory approvals.

*Global ART Data Report - Li na Northwest Women's and Children's Reproductive Center July 11, 2024 09:31

By Heranova Lifesciences

GLOBAL EXPANSION & COMMERCIAL TRACTION - 2

Vitrolife Collaboration – Early Commercial Success

- **Exclusive 5-year distribution agreement** with Vitrolife Japan KK covering Japan, Canada, and New Zealand.
- **Commercial sales secured in Japan**, reinforcing the Felix[™] System's market position.
- **Clinical validation data from Japan** highlights Felix[™] System's superior performance compared to conventional sperm preparation techniques.
- **Provision of trial data to Vitrolife expected** to expedite sales in Japan.

PART OF VITROLIFE GROUP"

GLOBAL EXPANSION & COMMERCIAL TRACTION - 3

Middle East Market Entry – Strong Growth Potential

- **Dubai fertility clinic places first order for Felix™ for research and evaluation under UAE Ministry of Health guidelines.**
- Memphasys in contact with additional clinics in region who have proactively reached out regarding sales interest.
- The Middle East & Africa IVF market projected to reach USD 3B by 2033, with Dubai a key centre for medical tourism and fertility treatments.

Brazil - Targeting commercial expansion

Partnered with a leading Brazilian andrology clinic to begin clinical utility testing of Felix[™]

FUNDING & GROWTH ROADMAP

Capital Strategy & Financial Position

Recent capital raise of \$1.857M, strengthening Memphasys' financial position for regulatory approvals and commercialisation efforts

Pursuing strategic funding at company and project levels, including investment, strategic licensing deals and potential joint ventures

Projected revenue growth driven by Felix[™] sales, consumable revenues, and **RoXsta™ expansion into** multi-industry applications

FUNDING & GROWTH ROADMAP

2025 Key Planned Milestones

Initiate trials/registration pathways for EU, China

Expansion of Felix[™] adoption in early-access IVF markets, leveraging key opinion leaders and distributor networks

Licencing deal with a major global distributor/partners

Scaling RoXsta[™] commercialisation, integrating real-world data into clinical and animal applications

Further global distribution agreements to accelerate Memphasys' market penetration

Publication of Felix[™] clinical trial results, bolstering regulatory submissions and supporting commercial traction

WHY INVEST IN MEMPHASYS?

Cutting-Edge, Market-Ready Technologies with Global Applications & Demand

Felix[™] and RoXsta[™] address significant gaps in reproductive health and oxidative stress diagnostics.

Strategic Partnerships Enabling Global Reach

Agreements with **Vitrolife and Heranova** to accelerate international expansion. More to follow

Proprietary IP & Strong Competitive Advantage

Patented bio-separation and oxidative stress measurement technology provide a robust market position.

Sustainable & Scalable Revenue Model

Recurring income from single-use consumables, licensing agreements, and commercial distribution partnerships.

Rapidly Expanding IVF & Diagnostic Markets

The global fertility sector is valued at **USD 30B+**, while oxidative stress diagnostics present a multi-billiondollar growth opportunity.

2025: A Transformational Year

Seeking key regulatory approvals, commercialisation of Felix[™] and RoXsta[™], and strategic partnerships supporting substantial revenue growth.

1. FELIX[™] SYSTEM: BETTER TECHNOLOGY FOR IVF SPERM PREPARATION

FELIX[™] SYSTEM:

Clear competitive advantages in performance, quality and operating costs

Electrophoretic system selects sperm with both low DNA damage & oxidative stress

Device consists of a console which applies a controlled charge to a disposable cartridge

Cartridge contains the novel electrophoretic technology

Cartridges are single-use with a new one required for each semen sample

> Ongoing, repeat revenue from single-use cartridge

FELIX[™] SYSTEM:

Clear competitive advantages in performance, quality and operating costs.

Conventional DGC (Density Gradient

FELIX[™] SYSTEM: Commercialisation Strategy

Global Opportunity - starts with early access markets

- Initial focus rollout of commercial sales in early access markets
- Key achievements in early access markets will provide:
 - Clinical Data
 - Legitimise Application
 - Build Brand Profile
 - Build End User Certitude
 - Build a Trusted KOL Network
 - Tested and Proven Pathway
 - All the above will help to establishing sales in advanced markets Australia, USA, Europe and China
- MEM working with large, trusted partners:
 - Heranova in Greater China
 - Vitrolife in Japan, Canada and New Zealand
 - Monash IVF in Australia
 - Indian Women's Center in India

Initial focus is to build sales in four early access markets:

Country	Fresh IVF Cycles in 2018	Expected fresh IVF cycles by 2026	% growth rate	KOL engaged in market	% of marl
Japan	269,110	699,110	+160%	\checkmark	14.59
India	169,800	489,840	+188%	\checkmark	9.2%
Canada	6,360	21,140	+232%	\checkmark	0.3%
New Zealand	5,300	11,190	+111%	\checkmark	0.3%
TOTAL		1,221,280			

FELIXTM SYSTEM JAPAN:

Japan Early Access Market – expanding into Canada & New Zealand

Memphasys Director of Operations Professor Hassan Bakos with representatives from Vitrolife Japan KK

Choosing the right partner – Vitrolife Japan KK (subsidiary of the Vitrolife Group)

- Exclusive distribution agreement signed for a 5-year term
- Vitrolife Group is a world-leading global provider of medical devices, consumables and genetic testing services dedicated to the human IVF and reproductive health market
- Group employs 1,100 people across 33 countries and its products and services are available in more than 125 countries
- Has direct commercial engagement with ~90% of all IVF clinics in Japan
- Perfect synergistic partner for Memphasys and FelixTM
- Working closely with Memphasys to expand sales in Japan expanding into Canada and New Zealand
- Sales expected to increase significantly post release of clinical trial data

FELIX[™] SYSTEM CHINA:

Assessments underway in world's largest assisted reproductive treatment market, China

Sichuan Jinxin Xinan Women & Children Hospital in Chengdu, China

50 Felix[™] System cartridges delivered Sichuan Jinxin Xinan Women & Children Hospital in Chengdu for in vivo assessments

Strategic Significance

- to grow to USD 9.04 billion by 2030¹.

Major hospital owned by Jinxin Fertility Group Limited (HKEX: JXR). JXR is renowned for ARS and women and children's healthcare, managing six hospitals and five co-managed facilities in mainland China. The Group is China's largest private ARS provider and also a major player in the US.

Felix Assessments in China led by Heranova Lifesciences HK Limited, a cutting-edge biotechnology company dedicated to delivering diagnostics and treatments for women's health, with a particular focus on endometriosis and female fertility.

Protocol will assess 50 cases covering routine to challenging IVF scenarios. Outcomes will include a number of performance metrics as well as commercial variables (operating costs, ease-of-use, etc).

Results to pave the way to access China's IVF market, valued at USD 5.37 billion in 2023, is projected

Subject to positive results, Memphasys and Heranova will work towards an exclusive distribution agreement with the option of licensing and manufacturing the Felix[™] System in the Territory, and finance of clinical trials and applications for NMPA Registration in the China.

FELIX[™] SYSTEM UAE:

Order to evaluate suitability in United Arab Emirates (UAE)

1. https://www.sperresearch.com/report-store/mea-in-vitro-fertilization-market.aspx

Order received for Felix™ from Dubai clinic to evaluate suitability for research use under UAE Ministry of Health and Prevention (MOHAP) guidelines

- Order includes one demonstration unit and 30 cartridges, supplied by Panacea Medizintech LLC, a UAE-based distributor
- Felix[™] System is provided on a "For Research Use Only" basis to comply with MOHAP regulations, with no claims for clinical use
- UAE market is strategically important for Memphasys, given its role as a regional hub for advanced medical technologies and its emphasis on innovation in assisted reproductive technology
- The Middle East and Africa (MEA) IVF market is forecast to reach US\$3 billion by 2033¹, with the UAE playing a key role as a leading medical tourism destination, especially for fertility treatments
- Memphasys will collaborate with Panacea Medizintech LLC for evaluation, supporting the system's potential global expansion and regulatory approvals like CE Mark and TGA certification

FELIXTM SYSTEM BRAZIL:

Targets commercial expansion in Brazil's IVF market

Partnered with Laboratorio Androscience, a leading Brazilian andrology clinic, to begin clinical utility testing of the Felix[™] System.

- Initial testing involves a Felix[™] console and 20 cartridges over a 3-month period.
- Androscience is exploring Men's Health products, including IVF, and is conducting market research to potentially invest in Memphasys for entry into the Brazilian market via licensing.
- Prof. Jorge Hallak, a prominent Brazilian andrologist, will lead a small trial to publish findings and increase market awareness of the Felix™ System.
- Memphasys will present at a major Brazilian reproductive medicine conference in 2025, with Prof. Hallak discussing the clinical utility of the Felix[™] System in andrology and IVF settings.
- Brazil's IVF market size is projected to grow to US\$ 413.6 million by 2032¹, representing a CAGR of 11.30% during the forecast period.

1 Refer to Brazil In Vitro Fertilization (IVF) Market Report by IMARC Group

FELIX[™] SYSTEM:

Commercial Financial Model

The commercial model for further licencing agreements for distribution will include some or all of the following:

- An upfront fee to MEM
- A royalty at an agreed rate for the Felix[®] devices and cartridges used by Licensee.
- Licensee may be authorised to manufacture, at its expense, the Felix[®] devices and cartridges (subject to the agreed royalty)
- Licensee may be given the right to appoint MEM as the manufacturer to supply Felix[®] devices and cartridges at a price to be agreed including an agreed margin over the cost of manufacture, plus the agreed royalty.

FELIXTM - STRATEGIC EQUINE FERTILITY STUDY

Initial Results Highly Positive, Validate Commercial Potential

- Three-year equine fertility study to position Felix[™] as a leading technology for equine sperm selection
- Initial study results highly positive, validating Felix[™] commercial potential in improving the quality of frozen-thawed stallion spermatozoa
- Felix[™] requires no major modifications for entry into the non-thoroughbred equine breeding sector
- The ongoing study expected to generate data necessary for market entry with sales on track within 12 months
- Study has \$30,000 annual cost (partially offset by Australian R&D) tax credits) but is expected to leverage over \$1M in research value
- Global Equine Artificial Insemination (AI) market estimated to be valued at US\$681.1M (2023) and projected to grow at CAGR of 5.7% (2024-2032).¹
- Felix[™] poised to capture a significant portion of the market which consists of 3,950 equine semen collection and processing facilities worldwide
- MEM is actively pursuing partnerships with global distributors

Three-year study being conducted in conjunction with the University of Newcastle and EquiBreedUK Ltd, a global *leader in equine reproduction. Two of Australia's leading* thoroughbred stud farms participating in the study

equibreeduk

FELIXTM SYSTEM:

Major Regulated Markets 2024-2025 – To Be Pursued With Strategic Partners*

Regulatory Strategy – CE mark

- MEM pursuing CE mark registration in Europe post-clinical trial completion, offering a faster and more lucrative pathway than the Australian Therapeutic Goods Administration (TGA) registration.
- Regulatory advice suggests CE mark process could take less than a year post-submission, providing a quicker route than the TGA. The technical file for regulatory submission is currently being prepared to ensure submission in H2 FY25, regardless of the exact trial completion date.

	Regulator	Pre- submission	Clinical Trials	Comments	Recently publishe data on IVF cycle numbers
EU	CE Mark	\checkmark	Clinical trial (complete) anticipated to be sufficient	Application pending post trial completion. Regulatory submission in the first half of 2025.	588,762 (2019) ¹
Australia	TGA	\checkmark	Anticipated CE mark registration expected to accelerate subsequent TGA registration. Existing clinical trial (complete) anticipated to be sufficient	New regulatory strategy leverages synergies between CE mark and TGA registration applications	102,157 (2021) ²
India	CDSCO		Clinical trial (complete) anticipated to be sufficient	In-country approval is standard pathway Investigating earlier access options	337,000 (2021) ³
China	NMPA	\checkmark	TBD	Heranova will under the umbrella of a licencing agreement fund a clinical registration study.	1,305,967 (2022) ⁴
USA	FDA	\checkmark	In-country clinical trial required	Will be a de novo FDA classification	413,776 (2021) ⁵

RECENT M&A IN THIS SPACE

CooperSurgical **Acquisition of Zymot** (Feb 2023)

CooperSurgical acquired Zymot, a company specialising in sperm separation devices, to enhance its IVF product offerings.

Vitrolife's Purchase of Igenomix (Aug 2022)

 Vitrolife acquired Igenomix, a genetic testing company, for €1.25 billion to strengthen its position in the IVF space, combining genetic testing with IVF solutions.

Hamilton Thorne purchased IVFtech, a Denmark-based manufacturer of laminar flow workstations and incubators, to enhance its IVF lab equipment offerings.

Hamilton Thorne's **Acquisition of IVFtech**

(Jan 2023)

FUJIFILM Irvine Scientific's Partnership

(June 2023)

FUJIFILM Irvine Scientific partnered with ASTEC to distribute its time-lapse incubation systems in the U.S., broadening its IVF technology portfolio.

Origio's Merger with Research Instruments

(April 2022)

Origio, part of CooperSurgical, merged with Research Instruments to create a comprehensive IVF device and technology platform.

OXIDATIVE STRESS MEASUREMENT **SYSTEM: A RAPID** IN VITRO ANTIOXIDANT ASSESSMENT

Free Radicals Attacking Cell

Cell With —— Oxidative Stress

OXIDATIVE STRESS

An imbalance between reactive oxygen species and antioxidant protection within the body

THE ISSUE:

Oxidative & Reductive Stress – Serious chemical imbalances

- Oxidative stress an imbalance between reactive oxygen species and antioxidant protection within the body and can also severely affect fertility in both humans and animals.
- <u>Reductive stress</u> an abnormal accumulation of reducing equivalents despite being in the presence of intact oxidation and reduction systems
- Imbalance tends to increase with age and can contribute to serious diseases.

ANTIOXIDANTS

Cellular reactions Healthy diet Specific oral formulations

Oxidative stress

Reductive stress

GENERATION OF 'ROS'

- Chronic antioxidant overdosing
- Elevated levels of biochemical reductants
- Reduced testosterone production
- Cellular energy dysregulation

SIMPLE EXPLANATION

Oxidative stress is like rust forming on metal. Just as metal rusts when it's exposed to oxygen over time, your body can "rust" or get damaged inside when it has too many harmful molecules (free radicals) and not enough of the good ones (antioxidants) to protect it.

For example, if you cut an apple and leave it out, it turns brown because of oxidation. Similarly, inside your body, if there's too much oxidation without protection, it can lead to damage and health issues.

THE ISSUE:

The adverse effect of oxidative / reductive stress imbalance

- Aging
- Impaired sperm production and maturation
- Increased sperm DNA damage
- Potential transgenerational effect
- Mutation in offspring
- Miscarriage
- Pre-eclampsia

- Chronic inflammatory disease
- Cancer
- Neurodegenerative disease
- Neuropsychiatric disorder
- Diabetes
- Cardiovascular disorders
- Chronic fatigue
- Asthma
- Erectile dysfunction

MEMPHASYS OPERATES IN THE MIDDLE

Memphasys is helping to avoid both Oxidative & Reductive Stress

Reductive stress

- Heart failure
- Neurogenesis inhibition
- Decreased cellular metabolism
- Muscular dystrophy
- Pulmonary hypertension
- Rheumatoid arthritis
- Alzheimer's disease
- Diminished life expectancy

WHAT HAS MEMPHASYS DONE – DOING NOW? TESTING A WORKING PROTOTYPE OF ITS FIRST-IN-WORLD OXIDATIVE STRESS MEASUREMENT SYSTEM

- **Developed the Oxidative Stress Measurement System:** Positive assay results, with distinct time advantages (6 minutes). Oxidative Stress is not routinely measured due to the slow and complex methods currently used
- Run KOL studies, positive results achieved
- Built a prototype, which is being tested in field
- Moving into an industry backed study to establish a baseline and thresholds for oxidative stress likely to be associated with meaningful events in reproductive performance.
- **Three-year equine fertility study**¹ with University of Newcastle and EquiBreedUK to explore oxidative stress measurement in both thoroughbred and non-thoroughbred horses. Thoroughbreds - studies investigating how physical exertion and oxidative stress affect reproductive health, with preliminary findings currently under analysis.
- **Provisional Patent Approval received** for its innovative antioxidant assay system, RoXsta[™]
- First paper in major international journal paper detailing the technical development of the RoXsta[™] accepted for publication in a leading international peer-reviewed journal.
- **Proactive engagement with industry**

1. Oxidative stress measurement to be tested along with Felix device as part of the study (see Slide 19 for more information)

UNMET DIAGNOSTIC NEED:

Technology can address multiple needs and large global market

Current Practice

Testing for oxidative stress is rare:

Oxidative Stress Measurement System

Several advantages over Current Practice:

Point of care diagnostic device

Six-minute process

Sensitive & accurate

Wide sample fluid choice: Semen, blood, urine, saliva, follicular fluid and spent embryo culture medium

More accurate disease profiling

Timely clinical intervention

.

ROXSTA COMMERCIAL APPLICATIONS TARGET MARKET AND OPPORTUNITY

User group	Application	Estimated Market Size ¹
Fertility researchers*	Researching underlying etiology of infertility & gestational issues	\$3b
IVF clinics	 Screening for infertility issues in male and female patients 	\$3b
Obstetricians	 Diagnosing and monitoring the progress of pregnancy; detecting foetal distress 	\$4b
Food technology industry*	 Screening for food antioxidant activity, e.g. to use in product marketing Addition of new, healthy antioxidants to extend food shelf life/improve health benefits 	\$3b
MEM internal use	 Screening for most powerful antioxidants to develop improved media for human & animal reproduction 	
Other clinician groups	 Diagnosing and monitoring various health conditions beyond fertility issues e.g. cardiovascular, neurological, endocrine etc. 	TBD
Point of care consumer test	 Assessing antioxidant status at home 	
Personalised medicine	Ability to titrate individualised levels of antioxidants and other drugs to administer	
Animal Health Industry*	Meat quality, IA and domestic pet markets	TBD
Cosmetic Industry	 Application of antioxidants for skin and ageing 	TBD
Crop Management	 Crop health and production 	TBD

*User groups which Memphasys is currently pursuing.

1. Conservative market size assumptions, based on industry interview estimates

OXIDATIVE STRESS MEASUREMENT SYSTEM Important application in the reproductive animal industry (husbandry, meat quality)

- Scoping study commenced to assess the potential use of RoXsta[™] System to determine threshold levels of oxidative stress in the bovine and potential correlations with productive performance.
- Preliminary pregnancy results expected late February 2025.
- If initial findings are promising, the study could lead to a larger-scale clinical trial in Autumn 2025, in collaboration with the University of Newcastle.
- The study represents a key step in exploring innovative solutions for improving livestock productivity, with potential significant benefits for the agricultural sector.

Selection for Resilience

Genetic Markers

- Breeding programs often focus on selecting animals that are genetically resilient to oxidative stress.
- Resilience can improve the animal's overall health, disease resistance, and longevity.
- Researchers identify genetic markers associated with oxidative stress resistance.
- Markers help in selecting and breeding animals that can better withstand oxidative stress, leading to healthier and more productive livestock.

3. BOARD AND MANAGEMENT

OUR LEADERS

Distinguished Emeritus Professor John Aitken

- Memphasys Scientific Director
- Global leader in reproductive biology, heading up world-class research team at University of Newcastle.
- Leads scientific development of MEM's pipeline products through R&D, and is now assisting in commercial strategy based on his international reputation and links.
- *Ranked #1 in the world in the cell biology of spermatozoa and germ cells, having published over 650 research articles and work cited >67,000 times**.
- Exceptionally well connected at a **GLOBAL** level to researchers, laboratories and clinics operating throughout the international reproductive industry.

*Source: Expertscape.com **h-index of 120, highest citation index in his field and in the top 5% for all of Biology and Biochemistry

MEMPHASYS BOARD

Experienced at bringing products to market

Lindley Edwards *Chair*

Dr. David Ali CEO

- Over 30 years experience in financial services, corporate governance, and strategic advisory roles
- CEO of AFG Venture Group, specialising in mergers, acquisitions, strategic partnerships, and technology commercialisation
- Strong expertise in corporate governance, risk management, and executing growth strategies across various industries
- Academic qualifications include degrees in Business (Accounting, Banking & Finance), a Postgraduate Diploma in Corporate Governance and advanced studies in digitization and innovation (MicroMasters and PhD)

- 35 years' experience in Animal and Human health across research, discovery, clinical trials, medical affairs, medico-commercial strategy
- PhD in Pharmacokinetics
- Managed BD activities and business units for global companies
- Experienced the business end of pharmaceutical product pre-launch and launch strategy and product life cycle management

Paul Wright NE Director

Michael Atkins NE Director

- More than 25 years' experience in development and sales of innovative medical devices and diagnostic tools
- Specialised in commercialising early research products
- Served as CEO for three leading companies developing, manufacturing and marketing medical devices and diagnostic instruments
- 8 years in Business Strategy Consulting with Bain & Co.

- Involved with formation of, and capital raising for, and management of, many listed companies on the ASX, both as a Chairman/Director and as a corporate advisor
- Most recently was a Senior Advisor to international stockbroker Canaccord Genuity in Australia
- Prior to that spent + 16 years in senior corporate advisory roles with several Australian stockbrokers,, including 10 years as Director – Corporate Finance at Paterson Securities
- Currently NED of ASX listed SRG Global Limited
