Exploration and development strategy

IMMEDIATE PLAN

to transition from explorer to development focusing on “high-value” free-milling silver ounces

- Exploration Target (Table 4) lower and upper range: 123 to 176Moz AgEq¹) free-milling pit constrained resources.
- Robust historical metallurgical testwork and recoveries²⁻⁴.
- Focus on Joaquin (baseload) with opportunity to transport shallow oxide mineralisation from Cerro Leon.
- High silver metal mix (~75% Ag / 25% Au).
- All resources within granted mining licences (“minas”).
- Development pathway accelerated by historical (Pan American Silver 2018 PFS²) baseline technical and environmental work at Joaquin and significant investment in supporting infrastructure.

MEDIUM-TERM STRATEGY

to unlock value through growth in sulphide resources, enhancing project scale and longevity

- Medium-term aspirations to increase mineral resources to 300Moz AgEq.
- Resource growth underpinned by multiple new sulphide discoveries⁵.
- Potential to enhance project scale and longevity.

Exploration Target

EXPLORATION RESULTS AND EXPLORATION TARGET

The information in this announcement that relates to the PLUS 150 Exploration Target is based on, and fairly reflects, information compiled by Mr Todd Williams, a Competent Person who is a Member of the Australian Institute of Geoscientists. Mr Williams is the Managing Director of Unico Silver Limited, a full-time employee and shareholder of the Company. Mr Williams has sufficient experience that is relevant to the style of

mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined by the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code). Mr Williams consents to the inclusion of the Exploration Target information in the form and context in which it appears.

METHODOLOGY

The PLUS 150 Exploration Target is conceptual in nature and is based on a combination of historical drilling, recent drill results, geological mapping, and metallurgical testwork. There has been insufficient exploration to estimate a Mineral Resource, and it is uncertain whether further exploration will result in the estimation of a Mineral Resource. The Exploration Target has been prepared and reported in accordance with the JORC Code (2012 Edition).

The PLUS 150 Exploration Target estimates the potential for approximately 31.5 million tonnes grading ~150 g/t AgEq, for a contained silver equivalent range of approximately 123 to 176 million ounces. The target includes free-milling oxide and transitional silver-gold mineralisation at the Joaquin and Cerro Leon projects in Santa Cruz, Argentina.

The target is based on the 2023 JORC Mineral Resource for Cerro Leon and the 2013 Foreign Estimate for Joaquin (net of historical production), together with new drilling completed by Unico Silver from 2024 to 2025 across 205 holes totalling 23,595 metres.

Tonnage and grade ranges for each prospect are show in Table 4 below. Metal equivalency (AgEq) has been calculated using commodity prices and recoveries disclosed on Table 1 and 2 and are believed to represent reasonable prospects for eventual economic extraction based on historical metallurgical testwork.

The geological assumptions, specific gravity factors, continuity of mineralised domains, and underlying drilling data supporting the Exploration Target are described in the announcement dated 13 June 2025, titled “Unico Outlines Growth Strategy”.

PLUS 150 Exploration Target is limited to mineralised domains considered to be free milling and recoverable via whole ore cyanidation²⁻⁴

- Significant metallurgical testwork complete from 2010 to 2017.
- Oxide and transitional mineralisation (100% of Joaquin Foreign estimate and 42% of Cerro Leon 2023 Mineral Resource) is free-milling and recoverable via whole ore cyanidation.
- Cyanide leach optimisation work commenced.
- Flotation testwork on Cerro Leon sulphide has produced *saleable silver-lead and zinc-indium concentrates.

*2010 (G&T) testwork on Marta Centro sulphide sample: a lead concentrate of 61.9% Pb and 1,461 g/t Ag was produced with 87.6% Pb recovery, and a zinc concentrate of 51.5% Zn and 121 g/t Ag was produced with 92.3% Zn recovery. The zinc concentrate also includes 823gpt indium.
