### **QTC Wins \$1.4 Million Traffic Controller Order**

**17 June 2014, Melbourne:** The Company is pleased to announce that its subsidiary company, Quick Turn Circuits (QTC), which was acquired in December 2013, has now been fully integrated into the Group and has secured a \$1.4 million order to supply traffic controllers to the Kingdom of Saudi Arabia. The order, which is for the supply of traffic controllers, associated software and spare parts, is expected to be delivered from late June 2014 with final deliveries in the early part of the 2015 financial year.

The cities of Dammam, Tabuk and Abha in Saudi Arabia will be converted to full adaptive traffic management systems through the implementation of SCATS (Sydney Coordinated and Adaptive Traffic Systems) and QTC's Hadron traffic controllers. QTC will be responsible for supplying the Hadron traffic controllers and SCATS systems, as well as installation and commissioning of the SCATS Central Manager software.

Commenting on the order, Managing Director Con Liosatos said: "This order is the latest in a series of export orders which QTC has won over the past year, both before and after the acquisition by Traffic Technologies. These orders have come from overseas countries including China, Singapore and Ecuador and open up potential new export markets for the Group's other products such as traffic signals and electronic signage in the future."

Should you require any further information please contact Mr. Con Liosatos.
