iWEBGATE PRIMED FOR US GROWTH

HIGHLIGHTS

- **iWebgate Press Release illustrates products potential**

The Directors of My ATM Holdings Limited ("**Company**") are pleased to announce the following update regarding the growth of the iWebgate Technology Limited ("IWG") business with the following press release dated 9 September 2014.

IWG PRESS RELEASE

"Amongst the backdrop of recent breaches in cyber security, IWG has primed its business for growth in the world's biggest ICT market.

Weekly reports of cyber security breaches around the globe are one of the symptoms associated with legacy architecture and conventional business processes. Unaware to many are the cost, complexity and risks associated with deploying a range of products needed to meet an organisations' commercial objectives and regulatory requirements.

iWebGate has created a software product delivering the Virtualization of Network Services. When installed on one physical or virtual server, iWebGate's Virtual Services Platform (VSP) establishes a comprehensive network of shared services (web, mail, file, proxy, reporting, remote access etc) between an organisation's primary network and all other internal and external networks.

This software-defined approach of placing a secure and collaborative network in front of all cloud and on-premise networks takes best practice DMZ security to a whole new level and creates many commercially capable opportunities.

Recently establishing headquarters in Maryland, one of the most innovative cyber security regions in the United States, was a major milestone for the Company. The move is enabling iWebGate to continue investing in the team and building collaborative relationships with exciting technology companies.

We are not just making a computer networking product. We are combining the skills of diverse people to make something no one person or company can create alone.

One example of this is CyberFlow Analytics (www.cyberflowanalytics.com) based in San Diego, California. The team at CyberFlow is impressive and their computer network experience expressed in a clever product capable of analyzing network behaviour and reporting in real time. In our experience, we have never seen network analysis delivered in this manner. We like finding

these sparks of genius and wrapping them into our Virtual Services Platform, so the average computer user can deploy powerful networking capabilities at the click of a button.

iWebGate is excited to announce the signing of a MOU with CyberFlow to jointly work on integrating IP. The expected outcome is the rapid development of a new product offering leveraging the iWebGate Virtual Services Platform with a innovative cybersecurity product capable of delivering more value to our partners and end customers.

"The Company is in a great position right now" says Mr. Mark Harrell, iWebGate Managing Director (APAC). "We are investing time and resources into some of the world's largest and most forward thinking cloud providers, so they can rapidly scale IT security and collaboration products as-a-service. This disrupts conventional supply chains and creates a whole new world of commercial opportunities for those companies gearing around software-defined network solutions. As an example, our desired partners include companies like AWS, RackSpace, Telstra, iiNet, AT&T, Northrop Grumman and more".

"We also have software development companies approaching us because they need to make their technologies "enterprise ready" in the fastest time and lowest cost possible. This term we use embraces many factors including risk mitigation, efficient distribution and rapid commercialisation delivering sustainable value" says Mr. Harrell.

Software companies can now become enterprise ready without the time, expertise and monetary investment previously required. When combined with large and strategic partners, iWebGate enables SMEs to receive the benefits of Virtual Network Services and advanced networking that is easily managed at an affordable price.

Large enterprises also benefit by segregating networks with greater ease and requiring SME suppliers to improve their security posture to mitigate risks and implement significantly improved processes.

iWebGate's VSP provisions world's-best practice security as recommended by US-CERT and highly collaborative capabilities to every organization's cloud and on-premise networks. This enables the Company to potentially generate revenues from many areas associated with the Internet ecosystem including cybersecurity, mobility and the emerging Internet of Things."
