St John of God Outreach Services selects Global's MasterCare

3 February 2015: Global Health is pleased to announce the finalisation of a contract with St John of God Health Care Inc. for the roll-out of the Company's **MasterCare** MHAGIC EMR, Data Warehouse and Patient Portal across all eight St John of God Raphael Centres in Australia.

Raphael Centres are part of the St John of God Social Outreach services which strive to improve health and wellbeing primarily for people disadvantaged through poverty, prejudice, stigma, disability, lack of access, powerlessness or marginalisation. Raphael Centres specialise in perinatal and infant mental health services and also provide mental health training for health professionals working with Aboriginal families.

Currently in eight locations across Australia, St John of God Raphael Centres provides Early Years Services for pregnant women and families with young children up to the age of four.

The **MasterCare** modules will consolidate clinical and administration information into geographic regions, enabling consistency of workflow and process wherever possible. The **MasterCare** Data Warehouse will enable group reporting to assess the efficacy of services and programs in terms of patient outcomes. Online engagement with the patients will be achieved through the use of Global Health's Patient Portal. Global Health's ReferralNet Secure electronic Messaging and electronic Claims are built into the **MasterCare** modules providing further streamlining of information flow between the services, their referral base, external agencies and external funders such as Medicare and Private Health Funds.

Global Health CEO, Mathew Cherian said "The team-based, shared-care model intrinsic to the **MasterCare** EMR design and the specific Mental Health features of the MHAGIC edition were key factors in the choice of our solution. The specific focus of the St John of God Outreach services on the social determinants of health is increasingly being recognised as one of the more critical factors to ensure healthy populations globally. We look forward to working together to further demonstrate this in a practical, cost-effective manner".
