Melbourne, 18 May 2015

Adacel Wins Contract to Supply ATC Simulators to the RAAF

Adacel Technologies Limited is pleased to announce that it has been awarded two further contracts by the Royal Australian Air Force (RAAF) for the supply of additional Air Traffic Control (ATC) simulators and the upgrade of existing ATC simulators. These contracts are valued at more than A\$2.5 million.

The contract provides for the supply of nine new Adacel MaxSim Part-Task Trainers (PTTs) and the upgrade of two existing systems to augment the established capability located at the RAAF School of Air Traffic Control (SATC) based at East Sale under a contract awarded in 2008. SATC has two 360-degree and one 252-degree full immersion tower simulators together with six Individual Task Trainers and one Radar simulator making it the largest and most comprehensive air traffic control training facility in the southern hemisphere.

The new PTTs will be single position versions of a similar system recently installed by Adacel at the Airservices Australia facility in Brisbane and will be deployed at each airfield controlled by RAAF ATC officers including civil/ military airports such as Williamtown (Newcastle), Darwin and Townsville.

SATC will further enhance its training capability with the additional contract to update the three full immersion simulators to the latest generation Laser projectors, providing increased visual acuity through improved brightness, contrast and colour rendering by the new projectors.

Seth Brown, Adacel CEO, said "we are very proud to continue our long term relationship with the RAAF in supplying them with the state-of-the-art simulators needed to support their training objectives".

The PTTs will be progressively delivered by the end of September 2015.

These contracts further consolidate the order back log and represent additional upside to the profit guidance and 2016 outlook announced last week.

-ENDS

About Adacel

Adacel Technologies Limited is a leading developer of advanced simulation and training solutions, speech recognition applications and operational air traffic management systems. Adacel is particularly well known for innovations within the ATC simulation and speech recognition fields. The Company's products are widely used throughout North America, Europe, the Middle East and the Asia Pacific region. Adacel is listed on the ASX and further information on the Company can be found on its website at www.adacel.com.
