
Genesis Cancer Care Research Collaboration Agreement

- **Collaboration with Australia's largest provider of radiation oncology**
- **Research into the design and 3D print manufacture of patient-specific electron beam shields for use in radiotherapy treatment**
- **Pathway to a manufacturing agreement for personalised radiotherapy consumables**

3D Medical Limited (ASX: **3DM**) and Genesis Cancer Care, a division of Genesis Care, Australia's largest private provider of radiation oncology, have signed a Research Collaboration Agreement as part of Genesis Care's focus on delivering increasingly personalised medical treatment.

The Research Collaboration Agreement allows the parties to undertake joint testing and evaluation of 3D printing and workflow processes for the purpose of manufacturing patient-specific electron beam shields that are personalised to the specific requirements of each patient's radiotherapy treatment. Subject to a successful outcome both parties will seek to enter a manufacture and supply relationship on commercial terms.

If successful, the collaboration will provide Genesis Cancer Care with enhanced workflows that will reduce the time to deliver radiotherapy treatments and deliver a highly personalised medical approach with improved patient outcomes.

Max Ghobrial CEO of 3DM commented, "We are delighted to have entered into this collaborative agreement with Genesis Cancer Care, Australia's largest provider of radiotherapy. The projects to be completed during the investigative phase of the agreement involve a novel application of 3D printing technology. If successful this will reduce the cost to deliver patient care and increase the quality of patient outcomes. These outcomes are consistent with our objective to be the preferred partner for managing and utilising 3D imagery in the clinical setting".

About 3D Medical Limited:

At 3D Medical our aim is to aid medical professionals in the facilitation of improved clinical care, improving medical procedures, diagnostics and ultimately improving patient outcomes.

3D Medical is a medical specific 3D printing and holographic projection and data integrations provider. Our services 3D Medical Printing; EchoPixel (holographic projection technology); GestSure (in surgery image control); Mach 7 (enterprise imaging solution provides healthcare organisations with the ability to archive, consolidate, access, and share medical

imaging data across departments, locations and regions) and MediDATA service provides medical practices the opportunity to leverage their analytical capabilities to gain an improved understanding of the characteristics of the patients which drive their business.

These new and innovative products leverage data already captured by conventional imaging modalities and apply it in more meaningful ways to deliver improved economic and patient outcomes.
