## 2. CHAIRMAN'S LETTER

On 17 July 2015, HSK announced its proposal to undertake a renounceable Rights Issue to raise \$3,684,956 (before costs of the issue).

The principal application of funds raised by the Rights Issue will be to provide the Company with additional working capital during the completion of the Moberly Frac Sand Project in British Columbia, Canada.

The Board believes completion of this Rights Issue will result in a stable balance sheet that will help support the strategic direction of the Company.

The Rights Issue offers shareholders the ability to acquire shares in the Company at an attractive price at the time of this Offer, and in quantities that would be very hard to achieve on-market. I encourage you to take up your Entitlement and note that all of the Company directors intend to participate in the Offer.

This Offer Document describes in detail the Company's offer to Eligible Shareholders of a renounceable Rights Issue which entitles you to acquire 1 New Share in the Company for every 5 Shares you hold, at a price of \$0.10 per New Share. A maximum of 36,849,559 New Shares will be issued and the New Shares will rank equally with the Company's existing Shares on issue. The Closing Date for acceptance and payment is 5.00pm Melbourne time on 11 August 2015.

Further information on the Offer is set out in this Offer Document.

You should carefully consider this Offer Document in its entirety and consult your financial adviser before making an investment decision. Neither the Company nor Morgans Corporate Limited will be subject to any liability for a failure to sell the Rights or any failure to sell them at a particular price.

If in the reasonable opinion of Morgans Corporate Limited, there is not a viable market for the Rights or a surplus over the expenses of the sale cannot be obtained for the Rights that would have been offered to Ineligible Shareholders, then the Rights will be allowed to lapse and they will form part of the Shortfall Facility.

The Company may, in consultation with the Underwriter and subject to any restrictions imposed by the Corporations Act or the Listing Rules, exercise a discretion to impose restrictions on the number of New Shares which can be taken up by any Shareholder under the Shortfall Facility. In exercising this discretion, factors such as the number of applications made and the number of available New Shares will be taken into consideration.

If you apply for additional New Shares under the Shortfall Facility you should be aware of the following:

## Moberly – think about the concept we are embarking upon

### Moberly JORC Resource

- Is large – over 32 million tonnes as categorised below:

RESOURCE CATEGORY	DRY TONNES (2014)
Measured*	10.8 million tonnes @ 64% frac sand
Indicated*	21.6 million tonnes @ 64% frac sand
<b>Total Measured and Indicated*</b>	<b>32.4 million tonnes @ 64% frac sand</b>

\* Mineral Resources for frac sand include that proportion modified to produce Ore Reserves of frac sand.

- Production @ 300,000 tpa frac sand would suggest +60 years of mine life if complete conversion to reserves, expanded pit engineering and permitting was achieved
- If production was expanded, 600,000 tpa frac sand would suggest +30 years of mine life again, with hurdles achieved

\*See Reserves and Resources announced on 28 October 2014. The information in this presentation that relates to the Moberly Resource estimate is extracted from the report entitled "Annual Statutory Update of Resources and Reserves" which was based on information compiled by Malcolm Ward, BSc (Hons), MSc (Queen's) who is a Fellow of the Australasian Institute of Mining and Metallurgy and released to the market on 28 October 2014 and is available to view on the Company's website, [www.hemskirk.com](http://www.hemskirk.com). The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement, and in the case of estimates of Mineral Resources and Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed, except that with new equipment now to be used in the plant, recoveries are expected to be in the order of 70% based on test work. This has yet to be incorporated into Resources and Reserves estimation. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.

## Large Hydrocarbon Resource – Western Canada Sedimentary Basin (WCSB)

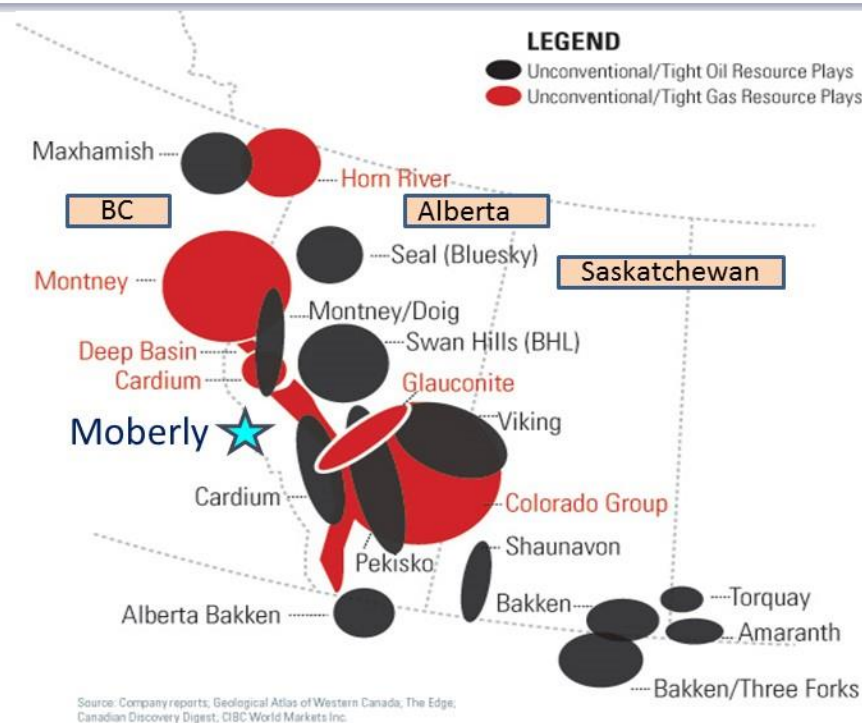

- China, Japan, South Korea and Malaysia among energy buyers eyeing northeastern BC gas
- Liard, Horn River and Cordova plays also boast significant gas reserves
- The Montney is regarded as being much larger than the Marcellus gas formation in the US Northeast
- Montney estimated to be the third largest hydrocarbon resource in North America, trailing only Alberta's oil sands and the Permian oil and gas basin in Texas and New Mexico

18

## Moberly – favourable logistics

19

## Frac sand market outlook in the WCSB

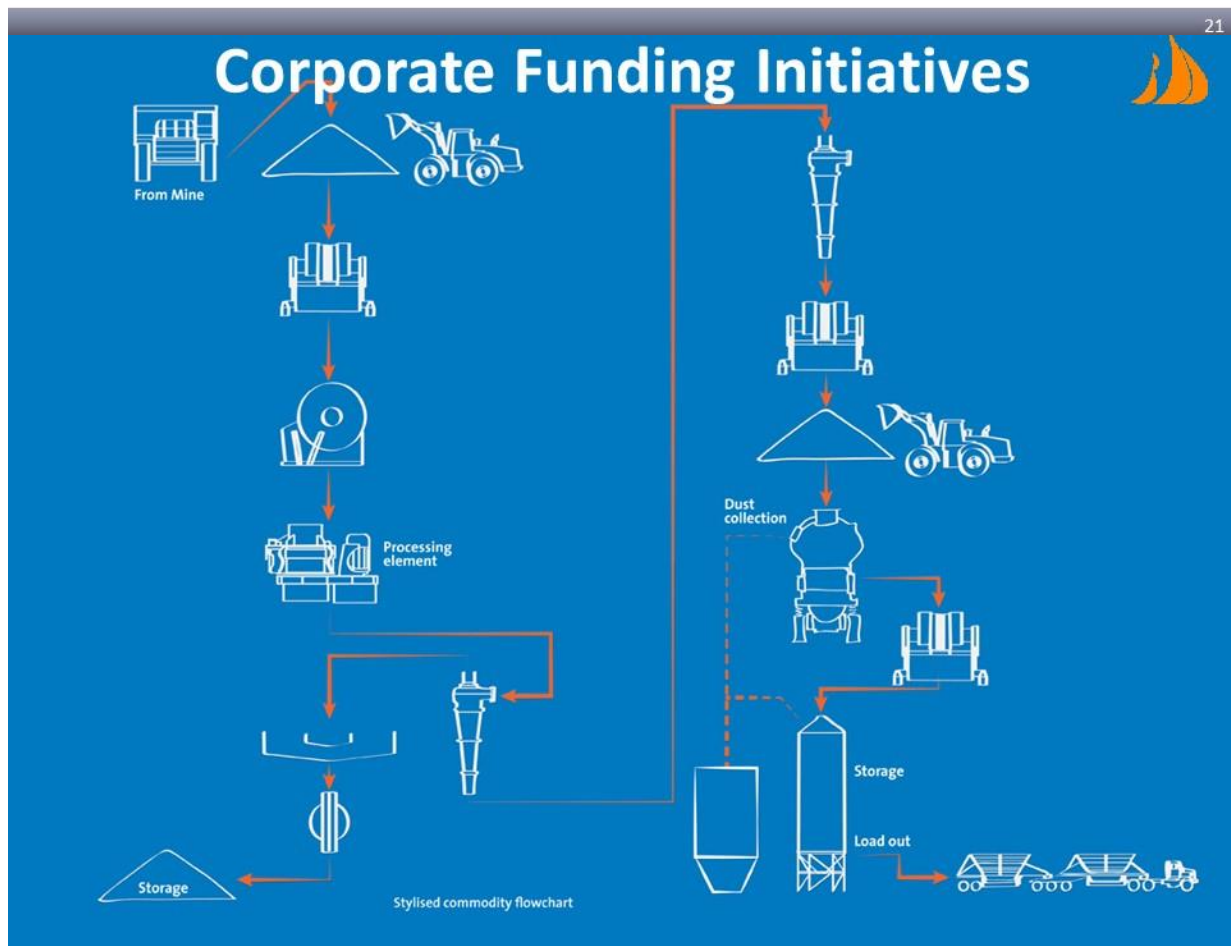

- Wells drilled still require stimulation (hydraulic fracturing) even if the well is intended to be shut in after completion
- Shut in wells are wells that can be brought into production quickly when prices recover or when additional production is required to meet contracted commitments
- The current trend in new well completions has been to use more sand than in the past
- We expect the usage of sand over the next 12 months to be flat or slightly increased due to the change in completion sand volumes

20

- The Moberly Stage 1 Project is estimated to represent slightly less than 10% of regional consumption
- Mount Moberly White Frac Sand meets all API parameters and meets customer technical approvals within the region

28

As with any stock market investment, there are various risks associated with investing in Heemskirk including:

- Existing business and operational risks for Heemskirk
- Risks specific to Heemskirk's Moberly Frac Project
- Potential investors should consider whether the securities offered are a suitable investment having regard to their own personal investment objectives and financial circumstances and the risk factors set out below. Heemskirk has implemented appropriate strategies, actions, systems and safeguards for known risks; however, some are outside the Company's control.
- While some common risk factors are set out below, it is not possible to produce an exhaustive list. The Directors of Heemskirk recommend that potential investors consult their professional advisers before making any investment decisions.

## Business and operational risks

### Production and cost estimates

- The ability of Heemskirk to achieve production targets, or meet operating and capital expenditure estimates on a timely basis cannot be assured. The assets of Heemskirk are subject to uncertainty with ore tonnes, grade, metallurgical recovery, ground conditions, operational environment, funding for development, regulatory changes, accidents and other unforeseen circumstances such as unplanned mechanical failure of plant or equipment.
- Heemskirk prepares estimates of future production, cash costs and capital costs of production for its operation. No assurance can be given that such estimates will be achieved. Failure to achieve production or cost estimates or material increases in costs could have an adverse impact on Heemskirk's future cash flows, profitability, results of operations and financial condition.
- Costs of production may also be affected by a variety of factors, including: changing waste-to-ore ratios, product recoveries, labour costs, general inflationary pressures and currency exchange rates.
- Unforeseen production cost increases could result in Heemskirk not realising its development plans or in such plans costing more than expected or taking longer to realise than expected. Any of these outcomes could have an adverse effect on Heemskirk's financial and operational performance.

31

## Business and operational risks cont.

### Ore Reserves and Mineral Resources

- Heemskirk's Ore Reserves and Mineral Resources are expressions or judgement based on industry practice, experience and knowledge and are estimates only. Estimates of Ore Reserves and Mineral Resources are necessarily imprecise and depend to some extent on interpretations which may prove inaccurate. No assurance can be given that the estimated reserves and resources are accurate or that the indicated level of silica or any other mineral will be produced. Such estimates are, in large part, based on interpretations of geological data obtained from drill holes and other sampling techniques. Actual mineralisation or geological conditions may be different from those predicted. No assurance can be given that any or all of Heemskirk's Mineral Resources constitute or will be converted into reserves.
- Market price fluctuations of frac sand as well as increased production and capital costs may render Heemskirk's Ore Reserves unprofitable to develop at a particular site or sites for periods of time or may render mineral reserves containing relatively lower grade mineralisation uneconomic. Estimated reserves may have to be recalculated based on actual production experience. Any of these factors may require Heemskirk to reduce its mineral reserves and resources, which could have a negative impact on Heemskirk's financial results and the expected operating life of its mines.
- Actual Ore Reserves and Mineral Resources may differ from those estimated, which could have a positive or negative effect on Heemskirk's financial performance.

### Replacement of depleted Ore Reserves

- Heemskirk must continually replace reserves depleted by production to maintain production levels over the long term. Reserves can be replaced by expanding known ore bodies, locating new deposits or making acquisitions. Exploration is highly speculative in nature. Heemskirk's exploration projects involve many risks and are frequently unsuccessful. There is no assurance that current or future exploration programs will be successful. Also, if a discovery is made, it may take several years from the initial phases of drilling until production is possible.
- There is a risk that depletion of reserves will not be offset by discoveries or acquisitions or that divestitures of assets will lead to a lower reserve base. The reserve base of Heemskirk may decline if reserves are mined without adequate replacement and Heemskirk may not be able to sustain production beyond the current mine lives, based on current production rates.

32

## Business and operational risks cont.

### Geological and Geotechnical

- There is a risk that unforeseen geological and geotechnical difficulties may be encountered when developing and mining Ore Reserves, such as unusual or unexpected geological conditions, pit wall failures, rock bursts, seismicity and cave-ins. In any of these events, a loss of revenue may be caused due to the lower than expected production and/or higher than anticipated operation and maintenance costs and/or on-going unplanned capital expenditure in order to meet production targets.

### Foreign Exchange Risk

- Heemskirk is an Australian business that reports in Australian dollars. Heemskirk's revenue is derived from the sale of frac sand in Canadian dollars and funding for the Moberly Project is received in US dollars. Costs are mainly incurred by the businesses in both Australian and Canadian dollars therefore events in the CAD/USD, CAD/AUD and AUD/USD exchange rates may adversely or beneficially affect Heemskirk's results of operations and cash flows. The risks associated with such fluctuations and volatility may be minimised by any currency hedging Heemskirk may undertake although there is no assurance as to the efficacy of such currency hedging.

### Regulatory Risk

- The operations of Heemskirk are subject to various Federal, State and local laws and plans including those relating to mining, prospecting, development, permit and licence requirements, industrial relations, environment, land use, royalties, water, native title and cultural heritage, land access, mine safety and occupational health.
- Approvals, licences and permits required to comply with such rules may, in some instances, be subject to the discretion of the applicable government or government officials, and, in some cases, the local community. No assurance can be given that Heemskirk will be successful in obtaining any or all of the various approvals, licences and permits or maintaining such authorisations in full force and effect without modification or revocation. To the extent such approvals are required and not retained or obtained in a timely manner or at all, Heemskirk may be curtailed or prohibited from continuing or proceeding with production and exploration.

33

## Business and operational risks cont.

### Weather and climactic conditions

- Heemskirk's sites and operations are subject annual weather seasonality which, from time to time, may result in delays or loss of production.

### Insurance risk

- Heemskirk maintains insurance coverage as determined appropriate by its board and management, but no assurance can be given that Heemskirk will continue to be able to obtain such insurance coverage at reasonable rates (or at all), or that any coverage it obtains will be adequate and available to cover all claims.

### Environmental risk

- Mining and exploration can be potentially environmentally hazardous, giving rise to potentially substantial costs for environmental rehabilitation, damage control and losses. Heemskirk is subject to environmental laws and regulations in connection with its operations and could be subject to liability due to risks inherent in its activities, including unforeseen circumstances.

34

### Hydraulic Fracturing

Due to significant public debate surrounding the environmental impacts of hydraulic fracturing, the industry is subject to substantial public and regulatory scrutiny and to rigorous public environmental approval and monitoring processes. The implementation of future regulations and approval processes may impact the market for frac sand products supplied by Heemskirk.

## Moberly Frac Project Risks

### Completion risk

- There is no certainty that the project will complete.

### Construction Risks

- Completion of the Moberly Frac Project involves a number of typical construction risks including the failure to obtain necessary approvals, employee or equipment shortages, higher than budgeted construction costs, insolvency events and project delays, which may impact the commerciality and economics of the project.

### Debt funding risk

- Heemskirk has entered into financing commitments pursuant to which financiers have agreed to provide debt financing for the Moberly Frac Project construction on certain terms and conditions. If certain events occur (e.g. insolvency, compliance with bank covenants etc.), the financiers may terminate the debt financing agreement. Termination of the debt financing agreement would have an adverse impact on Heemskirk's sources of funding for the Moberly Frac Project. The financiers have obtained security interests over Heemskirk's assets to secure the funding, there is a risk that the financiers could enforce this security if Heemskirk defaults on the agreement.

### Dilution risk

- The share placement to sophisticated investors will dilute the holdings of all Heemskirk shareholders who do not participate in the placement.
- The rights issue is fully underwritten and available to all shareholders. Shareholders who do not accept their Entitlement Offer will have their Heemskirk shareholding diluted.

### Underwriting risk

- Heemskirk has entered into an underwriting agreement under which the Underwriter have agreed to fully underwrite the Entitlement Offer, subject to the terms and conditions of the Underwriting Agreement between the parties.
- If certain conditions are not satisfied or certain events occur, the Underwriters may terminate the Underwriting Agreement. In these circumstances Heemskirk would need to find alternative funding to meet its ongoing business operating requirements. Termination of the Underwriting Agreement could materially adversely affect Heemskirk's business, cash flow, financial condition and results of operations.

37

### Underwriting risk cont.

There are certain events which may occur in the which trigger termination of the Underwriting Agreement. These termination events include where:

- The documentation for the Entitlement Offer or any aspect of the Entitlement Offer does not comply with the Corporations Act, ASX Listing Rules, the ASX Waivers or any other applicable law;
- A member of the Heemskirk Group breaches or defaults under any provision, undertaking, covenant or ratio of a material debt or financial arrangement or any related documentation which has an adverse effect on the Heemskirk Group;
- There is a material adverse change, or any development involving a prospective material adverse change, in the condition, financial or otherwise, or in the assets, liabilities, earnings, business (including the revocation or suspension of any authorisation or licence from a Government authority required to effect the Company's activities), results of operations, management or prospects of the Company from that described in the Offer Document; or
- A circumstance arises after lodgement of the Offer Document that results in the Company either repaying the money received from applicants or offering applicants an opportunity to withdraw their applications for New Shares and be repaid their Application Money;

### Dividends

- Any future determination as to the payment of dividends by Heemskirk will be at the discretion of the Directors and will depend on the financial condition of Heemskirk, future capital requirements and general business and other factors considered relevant by the Directors. No assurance in relation to the future payment of dividends or franking credits attaching to dividends can be given by Heemskirk.

38

### Share market conditions

Share market conditions may affect the value of Heemskirk's quoted shares regardless of Heemskirk's operating performance. Share market conditions are affected by many factors such as:

- general economic outlook;
- introduction of tax reform or other new legislation;
- interest rates and inflation rates;
- changes in investor sentiment toward particular market sectors;
- the demand for, and supply of, capital; and
- terrorism or other hostilities.

The market price of shares can fall as well as rise and may be subject to varied and unpredictable influences on the market for equities in general and resource exploration stocks in particular. Neither Heemskirk nor the Directors warrant the future performance of Heemskirk or any return on an investment in Heemskirk.
