NAV Portugal Selects Adacel for Upgraded ATM System

Adacel Technologies Limited (**Adacel** or the **Company**) is pleased to announce that is has been selected by NAV Portugal for a major upgrade of the System Atlantico (SATL), the Air Traffic Management system used for Oceanic, En Route, Approach and Tower control within the Santa Maria Flight Information Region.

The SATL system currently employs Adacel's Aurora ATM automation software. This upgrade is a further step by one of the key Air Navigation Service Providers in the North Atlantic Region (NAT) to improve airspace efficiency through the use of Performance Based Navigation (PBN).

Peter Landos, Adacel's Chairman, said "This contract continues our long and successful collaboration with NAV Portugal, which has seen the SATL system evolve into a single integrated system for oceanic, en route, approach and tower control incorporating all types of modern surveillance technologies. With this latest upgrade, NAV Portugal will continue to keep pace with the changing requirements in the NAT while improving air traffic services in the Azores."

Aurora is a global system and is the core product of the Company's air traffic management business. It is a system that manages all types of airspace and is scalable and configurable to meet present and future requirements while incorporating the latest in air traffic management technologies. Aurora automation technology is currently in operational use in airspaces controlled by Fiji, France, Iceland, New Zealand, Norway, Portugal and the United States.
