

ASX / Media Release ASX: AYA, AYAO 23 June 2014

ATTILA SUCCESSFULLY RE-ENTERS COKE MINE

Highlights

- MSHA approves safety plan to re-enter historic Coke No.1 Mine
- Re-access preparation completed with roof and floor inspected and in excellent condition
- Bulk sampling to commence imminently
- Additional geotechnical hole completed for mine design and assays dispatched for testing

Attila Resources Limited ("Attila" or the "Company") (ASX: AYA/AYAO) is pleased to announce that further to its announcement on 10 June 2014, it has received approval from the Mining Safety and Health Administration (MSHA) to re-enter the historic Coke No.1 Mine and has completed entry preparations.

The existing portals were inspected and found to be in excellent condition. Minimal roof and floor preparation is required and the primary ventilation circuit has been re-established. Attila will now proceed with routine preparations for commencement of a bulk sampling program scheduled for the week commencing 23 June 2014.

Attila CEO, Scott Sullivan, said "Successful mine re-entry is a key milestone for Attila and we are very pleased with the conditions we have encountered on entering the mine for the first time in 6 years. We are excited to get back underground and with the commencement of bulk sampling this week, the Definitive Feasibility Study continues to progress on schedule."

Attila has also completed drilling an additional targeted geotechnical hole, successfully intersecting the Coke and the Atkins coal seams with the primary hole and wedging. Samples of the roof, seam and floor have now been taken for both seams and dispatched to Norwest (Mine Feasibility Engineers) for geotechnical analysis. These results complement the Company's existing data and will be used for mine design, particularly pillar design.
