

## > Milling Campaign Update

Vector Resources Ltd (Vector or the Company) advises that it has received preliminary results on processing of ore from the bulk sample program from its Gwendolyn Gold Project.

The ore processed to date has resulted in 23,294 dmt being milled with an overall reconciled mill head grade of 3.15 gpt, with a recovery of 94.08%.

The average mill feed grades being achieved are significantly below the Company's expectations based on grade control drilling and independent assessment.

The bulk sample program was undertaken to allow the Company to accurately forecast the economics of the remaining Phase 1 and larger-scale Phase 2 operations at Gwendolyn, based on an established set of parameters obtained from the bulk sample.

The Company is now reviewing the Gwendolyn project in light of the mill feed grades.
