QUARTERLY REPORT FOR THE QUARTER ENDING 30 JUNE 2014

HIGHLIGHTS

- Annual Reports submitted for Flora Project
- Annual Reports submitted for Palm Springs

NORTHERN TERRITORY

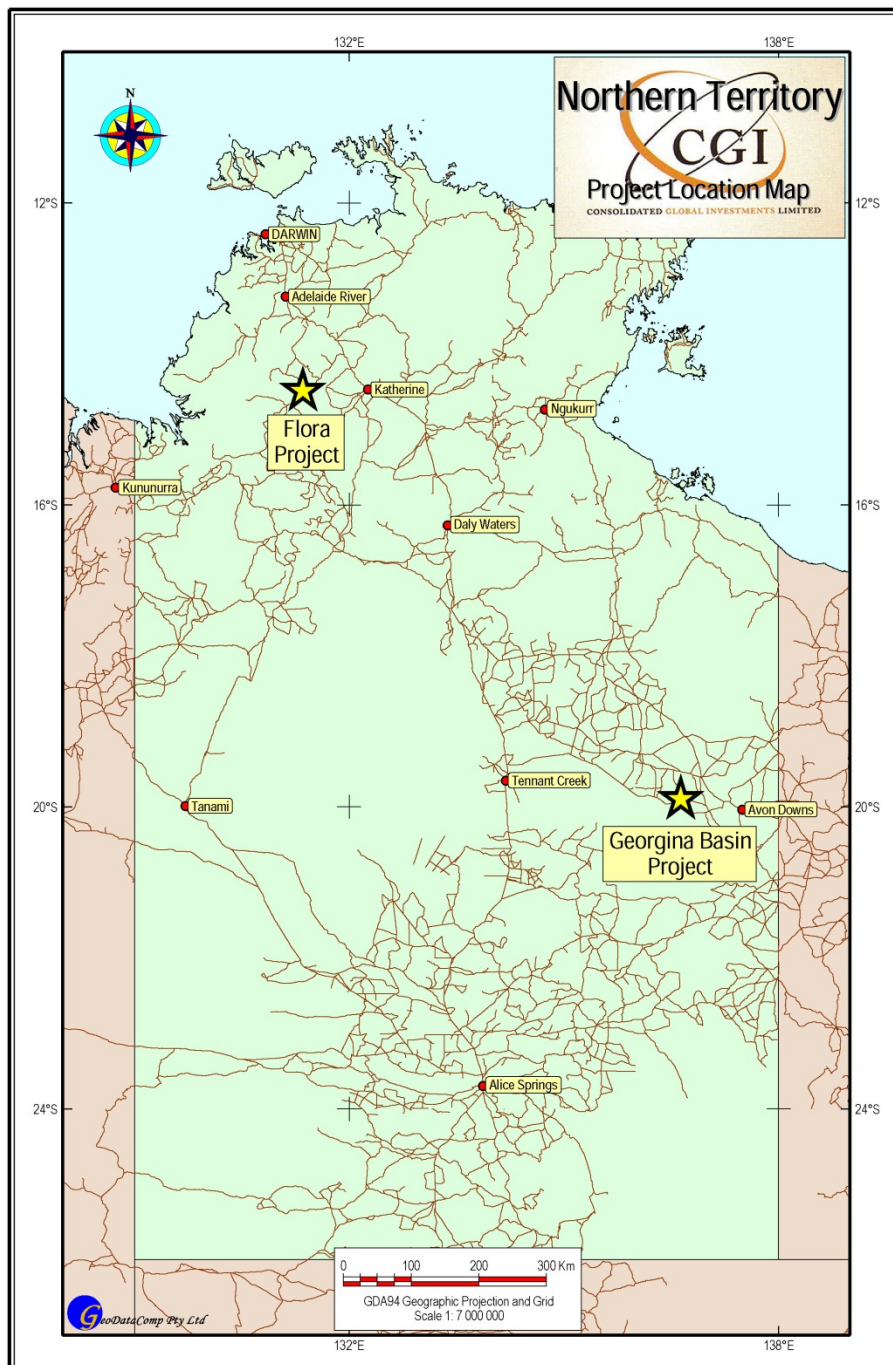

Figure 1 – Location of CGI Northern Territory Projects

Flora Project (EL26899, EL29757)

During previous exploration of the project area ten rock chip samples of barite have been taken from historical trenches and outcrop over an apparent strike length of approximately 2.5 km. The barite bodies appeared to be near vertical with thicknesses varying from 5 metres to 15 metres (see Figure 2).

Barium Sulphate (BaSO_4) content of the samples ranged between 97.9% and 84.6%, averaging 92.3%.

The barite lodes appear to be hydrothermally emplaced along a major basin margin fault system, the Dorisvale Fault. Continuation of mineralisation from surface to depth is likely with outcropping interpreted as the surface expression of a significant mineralised system. Potential has been recognised for high grade barite lodes suitable for use as drilling mud additive.

Further work planned on the barite potential of EL26899 includes:

- a) Assessment of the barite market and first pass profitability analysis
- b) Ground gravity survey over and adjacent to identified strike extension of the old barite mine. This survey should provide clear definition of barite mineralisation with resulting in pattern drilling and resource definition.

The Flora Project lies immediately to the south of the Heavy Rare Earth Elements (HREE) district which is being explored by Spectrum Rare Earth Limited (formerly TUC Resources).

U²/Th anomalous areas in the southern part of EL26899 which have previously shown anomalous TREO values remain priority targets for REE mineralisation, as does EL29757 to the east. A field sampling and assay program is planned to fully assess these areas.

During the quarter Annual Reports for EL26899 and 29757 were submitted to the Northern Territory Government.

No field work was carried out on the project area during the quarter.

Figure 2 – Location of Barite Rock Chip Samples, EL26899

Georgina Basin Ranken Project (EL29191)

Phosphorite deposits are widespread in the Proterozoic and Cambrian sediments of Australia although with the exception of the Georgina Basin they are small and uneconomic. The Wonarah Phosphate deposit owned by Minemakers Limited contains an Indicated and Inferred JORC resource of 933 Mt at 13% P₂O₅ at 5% cut-off (Minemakers Limited website). The Ranken project area lies 15km ENE of the Wonarah deposit and contains a similar geological sequence and paleo-sedimentary setting which CGI recognizes as prospective for new phosphate deposit discovery.

CGI Limited is actively seeking a joint venture partner to further the potential of the project.

No further exploration work was conducted on the project during the March quarter.

WESTERN AUSTRALIA

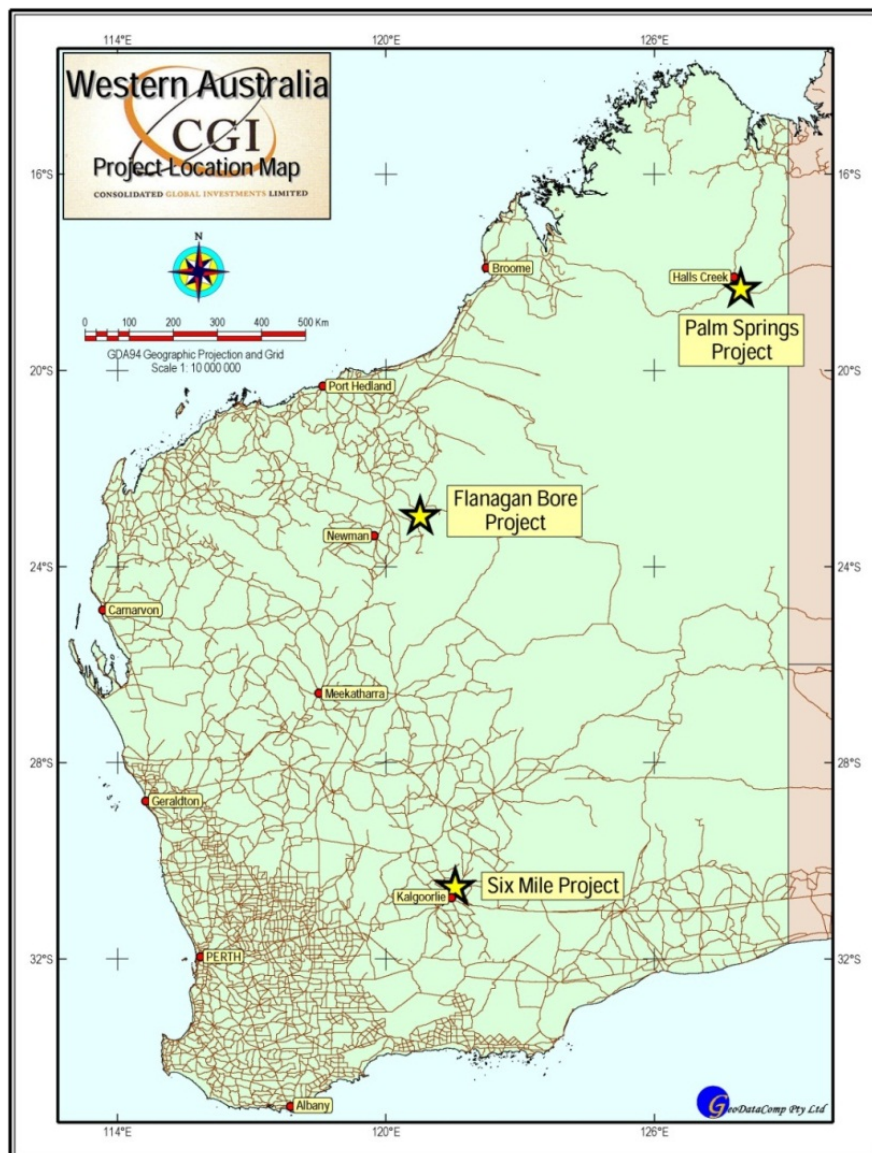

Figure 3 – Locations of CGI Western Australian Projects

Palm Springs Project (P80/1643, P80/1644, P80/1645, P80/1646, P80/1647)

The Palm Springs Prospecting Licenses are located in the immediate vicinity of the Butchers Creek Gold Mine which mined 761,000 tonnes from open pit to produce 52,000oz of gold between 1995 and 1997 (Dept. of Minerals and Petroleum, Open File Company Report A54952 - December 1997). The area lies 35km south east of Halls Creek.

Following field work and evaluation conducted during 2012, Extensions of Term for all 5 prospecting licenses were applied for and granted during March 2013, each for a four year term.

During the quarter Annual Reports for P80/1643 – P80/1647 were submitted to the Department of Minerals and Petroleum.

The report included a review of the work carried out during the 2013 year with ongoing exploration recommendations. Recommended work includes extensive rock chip sampling followed by a ground magnetic survey to identify structural targets for gold bearing mineralisation.

No further field work was conducted on the Palm Springs Project during the current quarter.

Flanagan Bore Project (E46/784)

During 2012 drilling and assay results returned from the Little Richard Prospect evidenced a manganiferous shale body extending 700m to the east from LRRC11 and LRRC12, its lateral thickness increasing to 200m and width increasing to plus 30 metres at its eastern end. Strike, thickness and width remain open to the east. The body also remains open to the south.

Best intersections are

LRRC08	37m at average 12.80% Mn from 3m
LRRC16	33m at average 11.33% Mn from surface
LRRC 03	28m at average 11.96% Mn from 4m

No further field work was carried out on the project during the quarter. Further evaluation of the previous work conducted is ongoing.

ADDITIONAL ACQUISITION

Other potential projects and opportunities continue to be reviewed.

CORPORATE

Subsequent to the end of the reporting period, on 11 July 2014 the Company announced that it had entered into a loan agreement with Finebase Holdings Pty Ltd whereby Finebase will loan up to \$200,000 to the Company. The proceeds from the loan will be applied to the Company's activities and expenditure on tenements and also to meet ongoing corporate expenses.

Competent Person's Statement

The information in this release relating to exploration is based on information compiled by Mr B. Townsend who is a member of the Australasian Institute of Mining and Metallurgy AusIMM). Mr B. Townsend is an Independent Geological Consultant to Consolidated Global Investments Limited and consents to the inclusion in this type of report of the information presented. Mr B. Townsend has sufficient experience relevant to the style of mineralisation and to the type of activity described to qualify as a competent person as defined in the 2004 Edition of the Australian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves.

Forward Looking Statement

Some statements in this report regarding future events are forward-looking statements. They involve risk and uncertainties that could cause actual results to differ from estimated results. Forward-looking statements may include, but are not limited to, statements concerning the Company's exploration programme, outlook, target sizes, resource and mineralized material estimates. They may include statements preceded by words such as "potential", "target", "scheduled", "planned", "estimate", "possible", "future", "prospective" and similar expressions.

About CGI

Consolidated Global Resources Limited is a diversified Perth-based exploration company with a focus on manganese, and barite exploration. CGI listed on the Australian Stock Exchange (ASX) in September 1987. The Company has assembled quality ground holdings in Western Australia and the Northern Territory. CGI's strategic approach is to identify and develop new mineral deposits with the potential to significantly enhance shareholder value. The CGI Board has extensive corporate, business development, mining and mineral exploration experience. For further information please refer to our website or contact John Palermo, Chairman.

Notes

- 1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.
- 2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements and petroleum tenements acquired, exercised or lapsed during the

+ See chapter 19 for defined terms.

reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement or petroleum tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.

- 3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.
- 4 The definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report.
- 5 **Accounting Standards** ASX will accept, for example, the use of International Financial Reporting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
