Initial Drilling Progressing Well at Tamboli

The Board of Western Mining Network Limited (“WMN” or the “Company”) is pleased to announce that its initial core-drilling program is progressing well at the Tamboli Project in South East Sulawesi, Indonesia. The Board wishes to congratulate the drilling team for their outstanding progress to date.

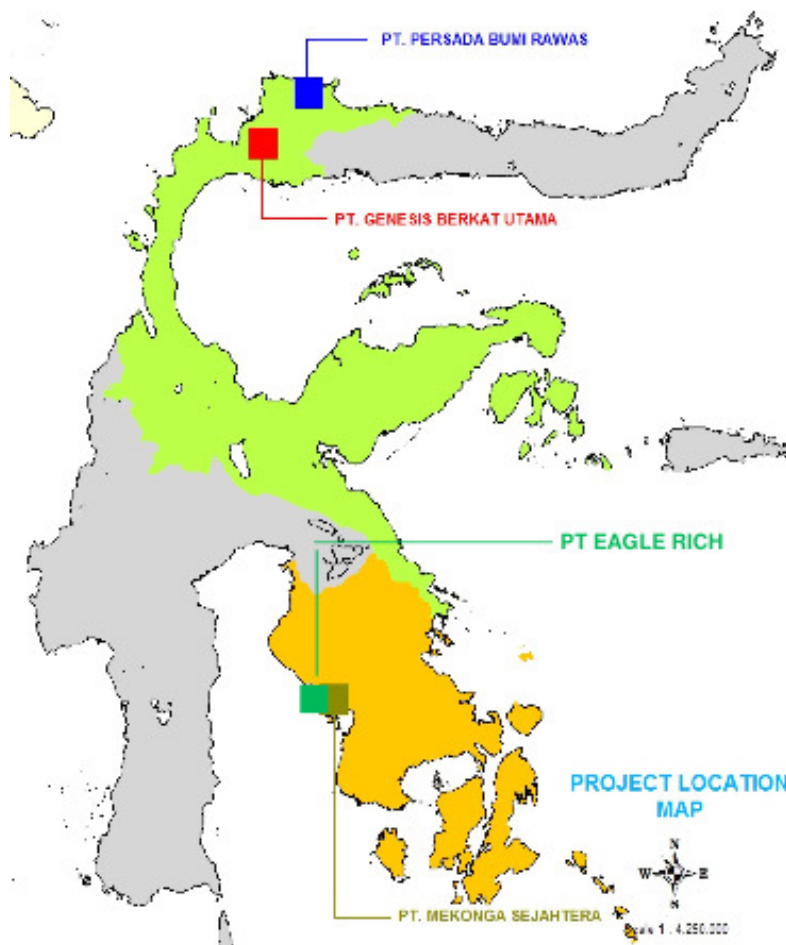

Figure 1: The location of the Tamboli Project (PT Mekongga Sejahtera)

Results from the geological mapping, topographic, and geophysical surveys have been used for strategic drill hole locations. The exploratory core-drilling program will consist of four initial holes.

Figure 2: Drill Rig at Tamboli

Upon completion of drilling on the four initial holes, the results will be used to determine a systematic drilling program where the actual number of holes and total meters drilled in the program will depend on the geology intersected in each hole. The on-site geologist will evaluate the data recovered from each hole and will exercise his judgement when collaring subsequent holes in order to optimise the chance for each drill hole to be as effective and as informative as possible.
