## **ARUMA COMMENCES EXPLORATION ON TWO FRONTS**

---

- **Bulloo Downs Copper Project HyMap survey commences**
- **Aircore drilling starts at Glandore Gold Project**

Diversified West Australian explorer **Aruma Resources Limited (ASX: AAJ)** (“Aruma”) is pleased to advise that exploration activity commenced this week at its Bulloo Downs Copper Project in the state’s Ashburton Region and its Glandore Gold Project, near Kalgoorlie.

The Company has started geological surveying using HyMap technology at Bulloo Downs, as well as a program of aircore drilling at Glandore.

### **BULLOO DOWNS**

Since the last mapping program was completed within the Bulloo Downs lease areas, Aruma has extended the strike length of the mapped structures and identified gossans with widths of up to 10m. The new program will see the Company flying over 1,720km<sup>2</sup> using HyVista Multispectral Scanning (HyMap), with the data to be combined with data collected from the previous 1,050km<sup>2</sup> program to define and confirm further mineralisation targets.

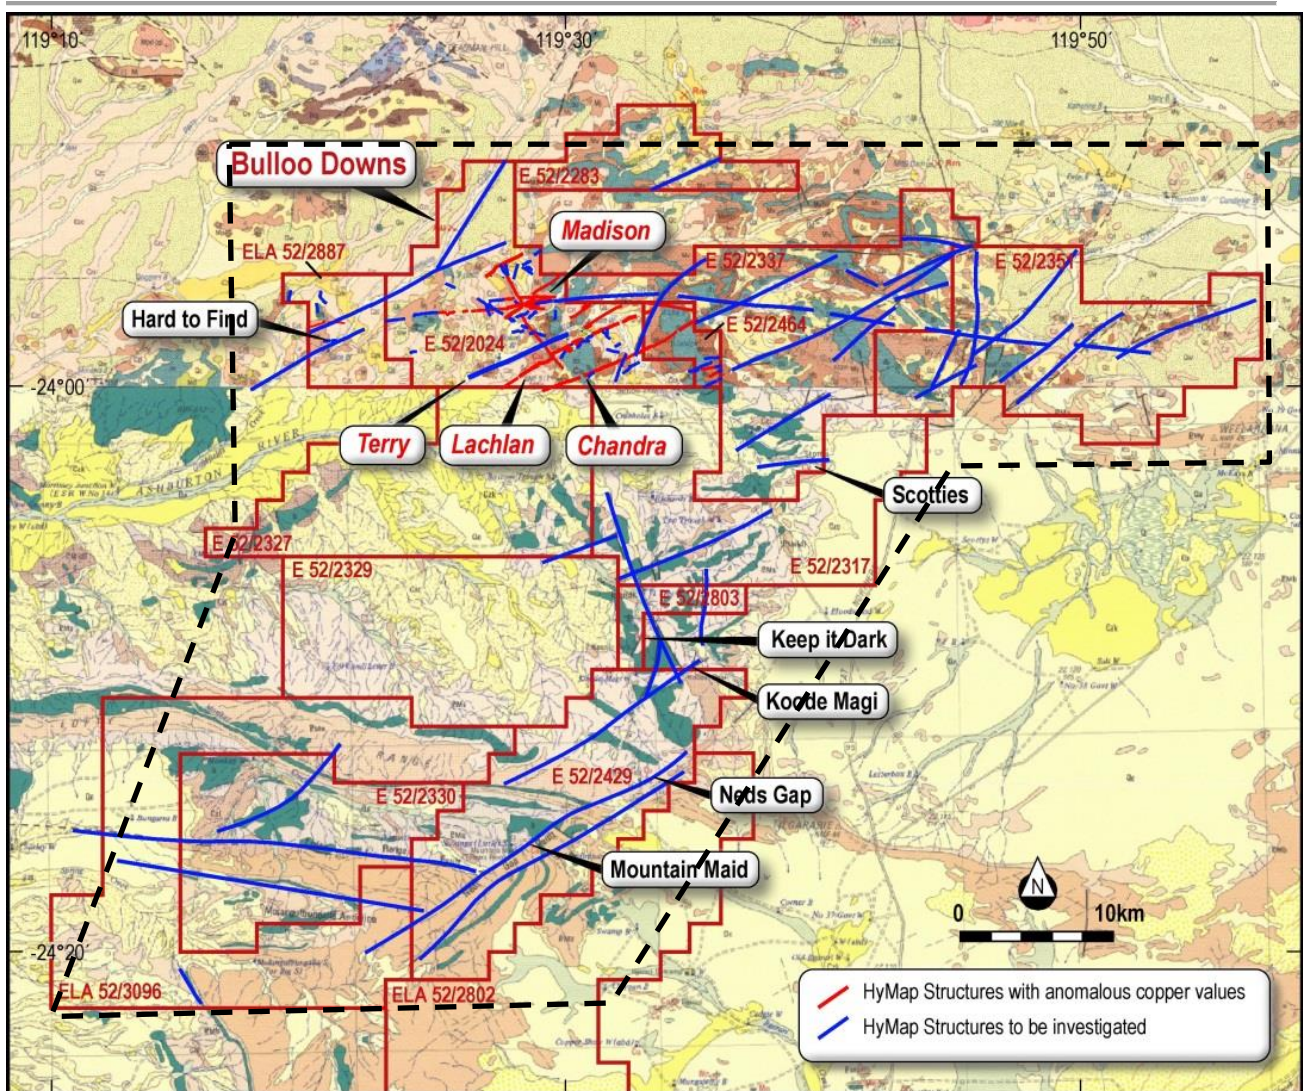

<b>Location</b>	<b>Lease</b>	<b>Length m</b>	<b>Width m</b>	<b>Cu %</b>	<b>Au ppm</b>	<b>Pb %</b>
Scotties	E52/2337	100	2	42.93	1.5	0.1
Keep it Dark	E52/2803	100	3	<0.1	<0.1	20.5
Madison	E52/2024	3000	3	42.6	1	<0.1
Chandra	E52/2024	8000	2	7.63	<0.1	<0.1
Terry’s	E52/2024	800	2	0.57	<0.1	0.14
Koode Maji SW	E52/2429	900	10	0.24	<0.1	0.14
Koode Maji	E52/2429	100	2	15.9	<0.1	0.11% Zn
Neds Gap	E52/2429	1100	2	16.7	<0.1	0.12
Mountain Maid	E52/2429	600	2	35	<0.1	0.05

**Table 1: Sampling results from all prospects (previously published 6 August 2014)**

Table 1 above summarises the extent and tenor of the mapped mineralisation. The gossans are large by comparison to other gossans in Western Australia.

**Figure 1: Bulloo Downs Copper project with HyMap coverage in black dashed outline**

**GLANDORE**

Aircore drilling of the northern lake area at Glandore has also commenced with a specialised salt lake aircore rig. Some 3,000m in 50m deep holes was planned but the holes are being drilled to around 60m before refusal, hence some 4,000m will be drilled for the program. The holes are shown in Figure 2 below.

The softer nature of the ground being drilled has allowed Aruma to extend the drill coverage with the deep weathering reflecting the altered nature of the rocks in the Fluid Flow Target areas. In previous drilling to the south, fresh rock was intersected at depths as shallow as 5 to 10 m.

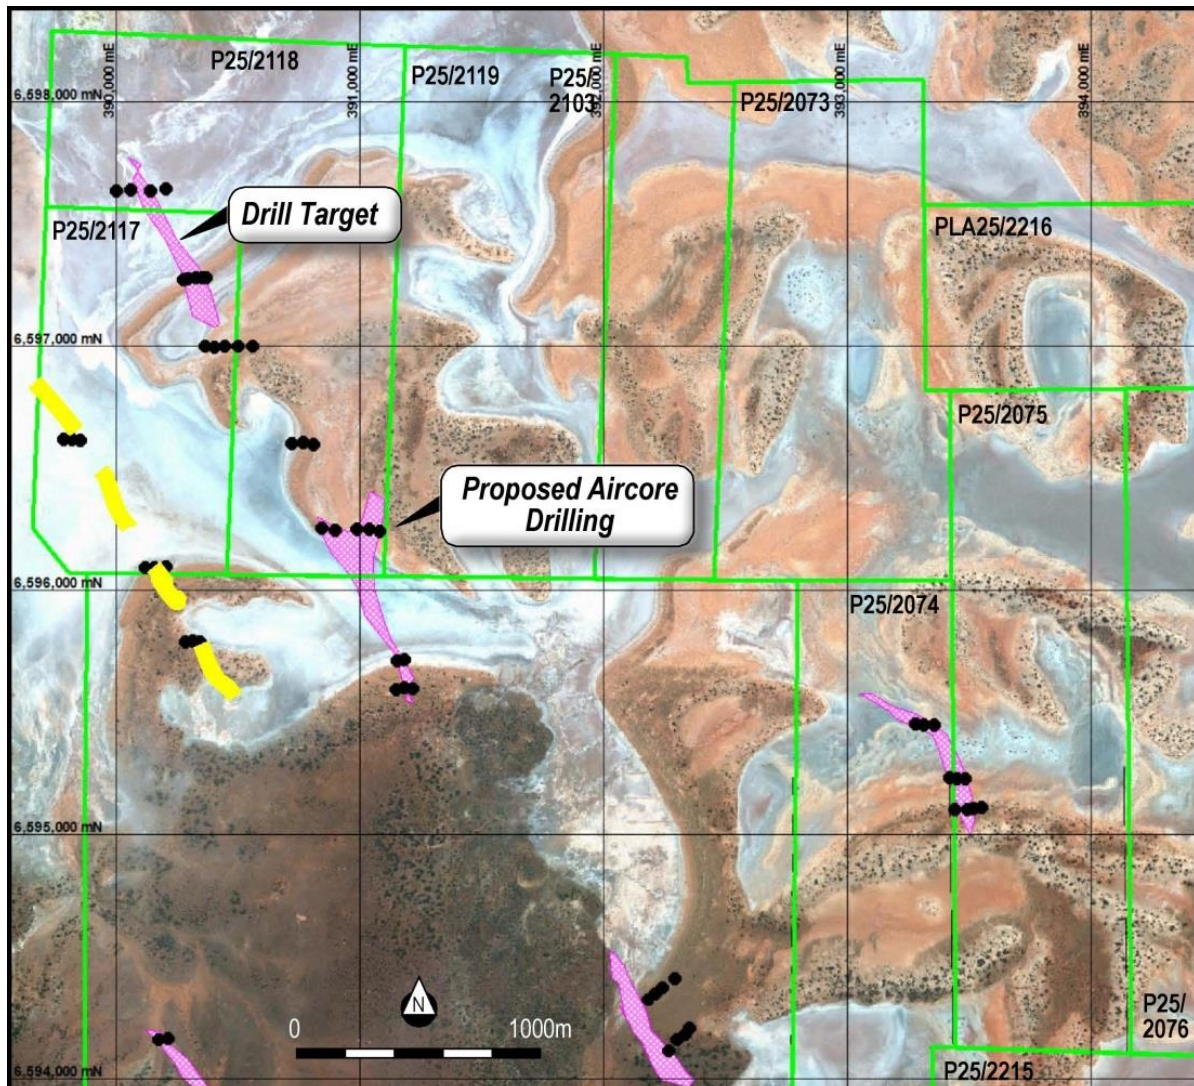

The drilling program is expected to last about 8 days, and the samples will be assayed in Kalgoorlie, with the results expected in October.

### **Competent Person's Statement**

*The information in this release that relates to Exploration Results, Mineral Resources or Ore Reserves is based on information compiled by Peter Schwann who is a Fellow of the Australasian Institute of Mining and Metallurgy and Chartered Professional (Geology). Mr Schwann is Managing Director and a full time employee of the Company. Mr Schwann has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Schwann consents to the inclusion in the release of the matters based on his information in the form and context in which it appears. All exploration results reported have previously been released to ASX and are available to be viewed on the Company website [www.arumaresources.com.au](http://www.arumaresources.com.au). The Company confirms it is not aware of any new information that materially affects the information included in the original announcement. The Company confirms that the form and context in which the Competent Person's findings are present have not been materially modified from the original announcements.*
