Dear Sir

Victorian Liberal Government Offers 3D printers for Victorian Schools

The Directors of Oz Brewing Limited ("**Oz Brewing**" or the "**Company**") refer to its announcement released on 31 July 2014 regarding its proposed acquisition of 3D Group Pty Ltd ("**3DG**"), an Australian unlisted company focussed on opportunities associated with 3D printing.

Highlights

- **\$2.2 million for 3D printers for 391 government secondary and special schools if re-elected**
- **Latest technology will be used to enhance science education to prepare students for the jobs of tomorrow**
- **Napthine Government building a better education system for all Victorians**

Victorian Government Media Release

Victorian Premier, Dennis Napthine yesterday announced that 'The Coalition Government will fund up to \$3,750 to purchase single model printers and associated consumables for up to 316 secondary and P-12 schools plus 75 special schools with secondary students, across the state if re-elected'. Speaking at a demonstration of a 3D printer at Melbourne Museum, Dr Napthine said the \$2.2 million program would deliver 21st century resources to enhance science education in schools.

3DG is well positioned to be the preferred supplier of the government's announcement to provide 3D printers in every Victorian government secondary school. 3DG has designed and manufactured locally the world's first "School Printer" – specially designed to meet the rigorous requirements of an education environment, without the price tag. The School Printer will have dimensions of 990mm x 580mm x 580mm and dual extruders providing maximum functionality, speed and performance. It is designed to meet the printing requirements of a classroom in one single print run.

3DG has a complete integrated platform providing not only the printer but also the educational software and portal required to fully utilise and manage the printer. This blocks and prevents the printer from being used for non-educational purposes. 3DG will also provide the product material, training and support to ensure the 3D printers work to their optimum.

Frank Pertile, Managing Director of 3DG commented "We are excited by the announcement made yesterday by Premier Napthine. It validates 3DG's decision many months back to design, engineer and manufacture a 3D printer specifically for schools. We look forward to engaging with the government to ensure that the locally made, best of breed 3DG school printer is chosen to be installed in all Victorian government secondary schools. It will not only be an investment in education, but the re-birth of manufacturing, and jobs creation in Victoria."

About 3D Group

3DG has been established with a clear strategy to become Australia's leading integrated multi-platform 3D printing company. 3DG 3D printers are entirely owned, designed and built in Victoria, Australia. 3DG understands the enormous potential of this technology, and the extraordinary opportunity it has to re-engineer the way industries operate. This revolutionary technology enables the creation of products that could never have been made before, changing the entire dynamics of design and development. 3DG believes that this technology will create new business and industry opportunities that previously didn't exist. We also understand that Australia is perfectly positioned to participate in this new manufacturing paradigm, and 3DG intends to be the market leader and showcase Australia's skills and manufacturing excellence to the world.
