

**Finding the copper the world needs for a low-carbon future**

## **The Stavely Copper-Gold Project**

**Dawn of a new world-class copper-gold province in Western Victoria**

Arlington Group – The Big Copper Wave  
October 2020

- This presentation contains only an overview of Stavely Minerals Limited (“Stavely” or the “Company”) and its activities and operations. The contents of this presentation, including matters relating to the geology and exploration potential of the Company’s projects, may rely on various assumptions and subjective interpretations which it is not possible to detail in this presentation and which have not been subject to any independent verification.
- This presentation contains a number of forward-looking statements. Known and unknown risks and uncertainties, and factors outside of the Company’s control, may cause the actual results, performance and achievements of the Company to differ materially from those expressed or implied in this presentation.
- To the maximum extent permitted by law, Stavely does not warrant the accuracy, currency or completeness of the information in this presentation, nor the future performance of the Company, and will not be responsible for any loss or damage arising from the use of the information.
- The information contained in this presentation is not a substitute for detailed investigation or analysis of any particular issue. Current and potential investors should seek independent advice before making any investment decision in regard to the Company or its activities.

# A Modern Australian Copper-Gold Growth Company

- **First-mover position** – largest and most strategic tenement holding in the Stavelly Volcanic Belt, western Victoria
- **A committed explorer** – focused on making transformational mineral discoveries since \$6m IPO in 2014
- **Recent breakthrough** – outstanding shallow high-grade copper-gold-silver discovery (September 2019), the Cayley Lode
- **Resource drill-out underway** – targeting maiden JORC Resource later this year – seeking access to southern extension
- **New style of mineralisation** – Magma/Butte copper lode-style system, never before seen in Australia
- **Multiple discovery opportunities** – potential to become a new copper province as additional mineralised positions are tested
- **Well-funded** – \$32m in cash

# Corporate Summary

## CAPITAL STRUCTURE

<b>ASX Ticker</b>	<b>SVY</b>
<b>Share Price (13/10/20)</b>	<b>\$0.595</b>
<b>Shares on Issue</b>	<b>261M</b>
<b>Cash (30/08/20)</b>	<b>\$32M</b>
<b>Market Capitalisation</b>	<b>\$155M</b>
<b>Management and Staff</b>	<b>~20% equity</b>

## Directors

<b>Chris Cairns</b>	<b>Executive Chairman</b>
<b>Jennifer Murphy</b>	<b>Technical Director</b>
<b>Peter Ironside</b>	<b>Non-Executive Director</b>
<b>Amanda Sparks</b>	<b>Non-Executive Director &amp; Company Secretary</b>

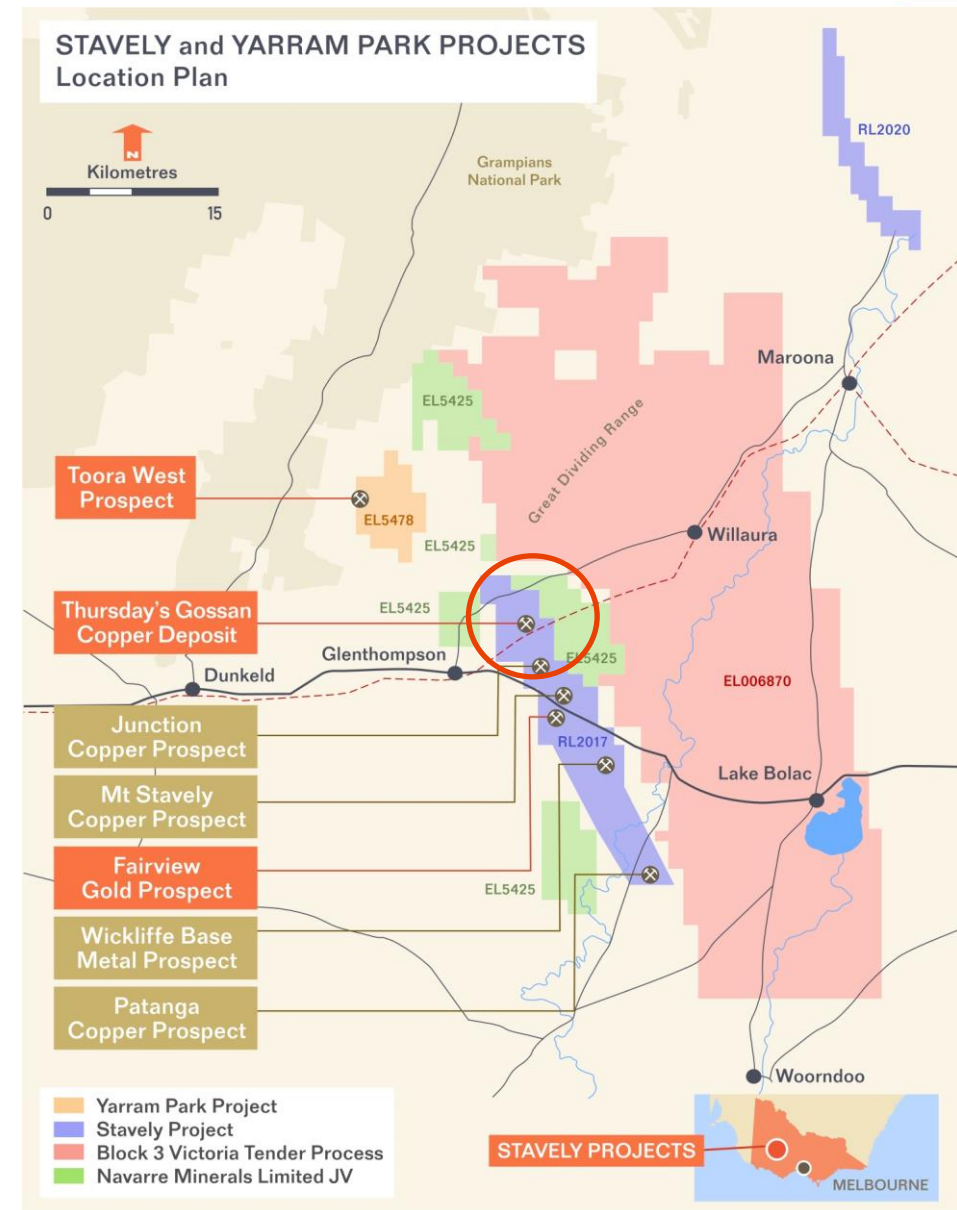

## Share Price – 13 October 2020

# First-Mover Position in Victoria's Stavelly Arc

- Two cornerstone assets – 100%-owned **Stavelly** and **Ararat** Projects
- **1,461km<sup>2</sup> ground position** in Australia's new exploration hot-spot of western Victoria (Kirkland Lake – Fosterville)
- Majority of exploration since 2014 focused on Thursday's Gossan, targeting a **Tier-1, Cadia-style copper-gold** porphyry system

# Stavely Copper-Gold Project – Thursday's Gossan

- Thursday's Gossan includes an extensive chalcocite-enriched blanket occurring 30m to 80m below surface
- Inferred Mineral Resource of **28Mt at 0.4% copper<sup>1</sup>** for 110kt of contained copper
- Developed as the surface expression of high-grade lode-style copper veins

**We always knew there was plenty of shallow copper at Thursday's Gossan. But we were looking for a porphyry at depth....**

<sup>1</sup> reported in compliance with JORC 2012, see ASX announcement 8 September 2015, subsequent Annual Reports and available from [www.stavely.com.au](http://www.stavely.com.au)

# Thursday's Gossan – The Story So Far

- 49 diamond drill-holes completed to depths of up to 1.8km targeting the elusive “core” of the porphyry system
- Strong indications of proximity to a buried porphyry with significant encouragement from assays, petrology and geochemistry
- **Significant breakthrough in September 2019** following decision to target a shallow, structurally controlled target along the steeply-dipping Ultramafic Contact Fault

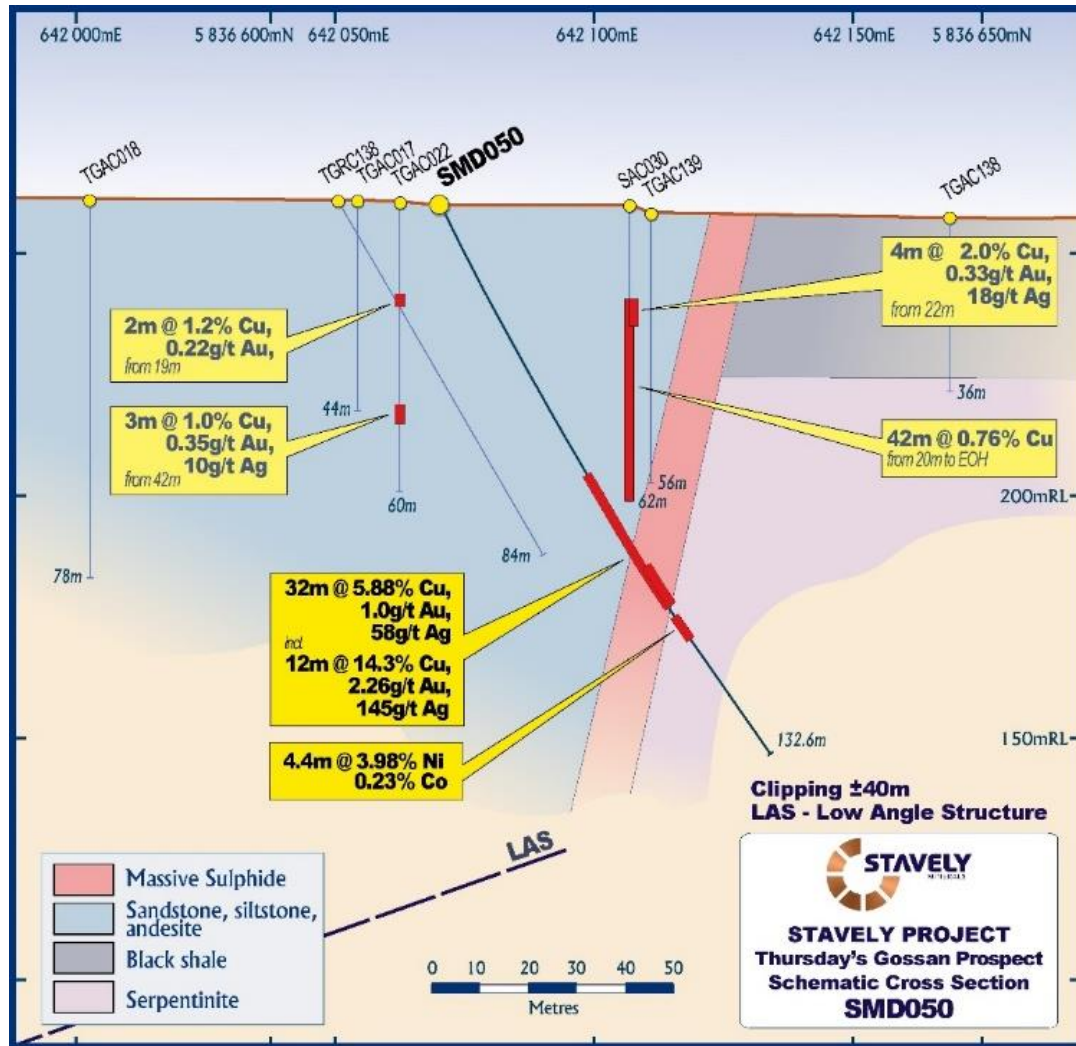

**Hole SMD050 was a game changer**

See ASX announcement 26/09/2019 and available from [www.stavely.com.au](http://www.stavely.com.au)

# Discovery Breakthrough – Hole SMD050

## SMD050

- **32m at 5.88% copper, 1.00g/t gold and 58g/t silver**, from 62m drill depth, including:
  - 12m at 14.3% copper, 2.26g/t gold and 145g/t silver from 82m, including:
  - 2m at 40% copper, 3.00g/t gold and 517g/t silver
- Surprisingly, SMD050 also intersected:
  - 4.4m at 3.98% nickel, 0.23% cobalt and >1% chrome

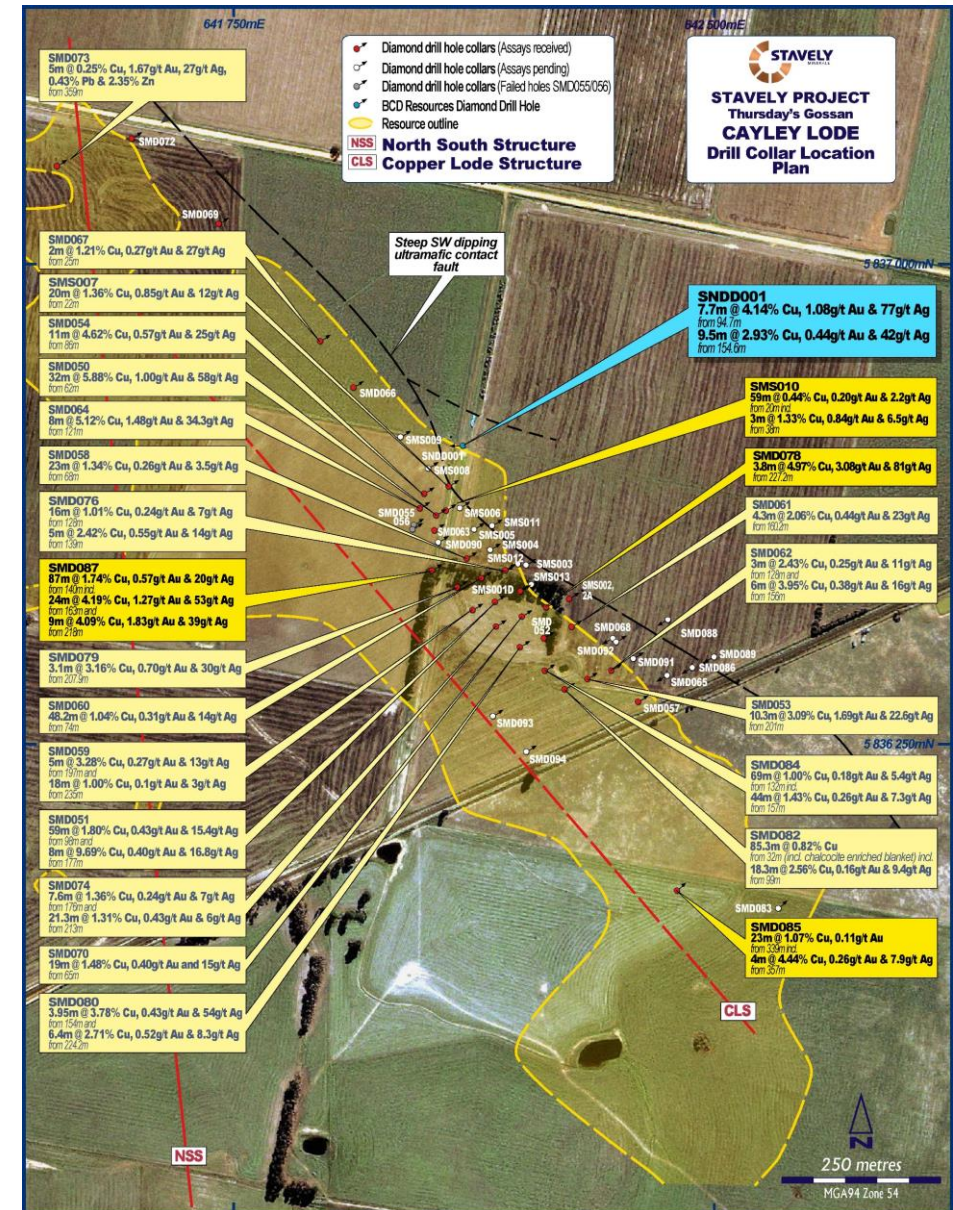

See ASX announcement 26/09/2019 and available from [www.stavely.com.au](http://www.stavely.com.au)

# Cayley Lode Discovery – Shallow, High-Grade Mineralisation

- Magma / Butte copper lode-style system – outstanding exploration target never before seen in Australia
- Mineralisation so far defined over ~1.5 km strike length to ~300m depth, averaging 10-50m thickness
- Resource drilling underway on ~40m X 40m drill pattern
- Mineralisation remains open along strike and down-dip
- As of this week, 4 diamond drill rigs operating on the resource drill-out
- 2 further high-capacity drill rigs to arrive in November for 2 x 1.5km drill holes to test the porphyry targets

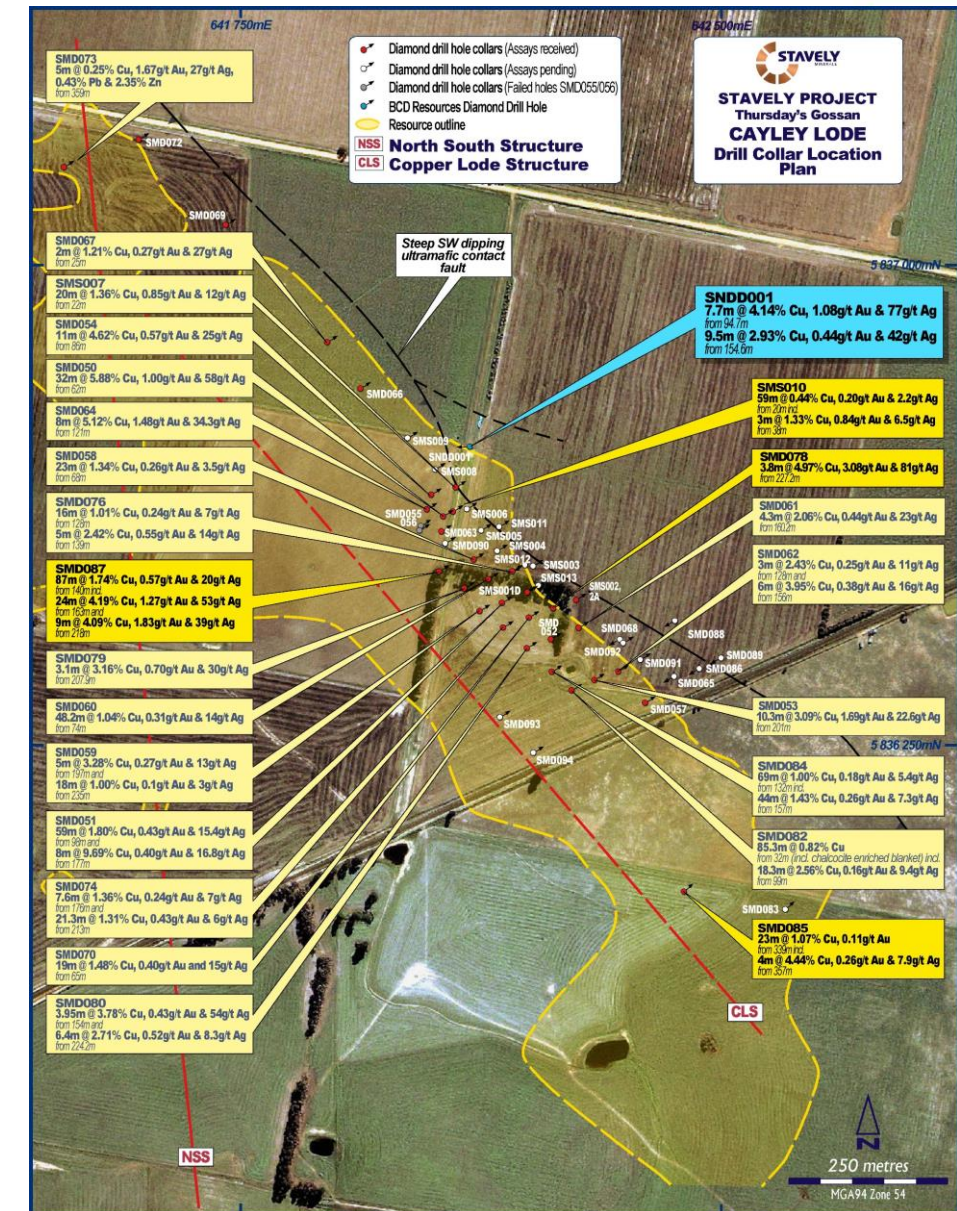

# Cayley Lode Discovery – Mineral Resource Drill-out

Why are we taking the time to drill the shallow Mineral Resource at a 'tight' 40m x 40m spacing?

- The intention is to have a large proportion of the initial resource in the Indicated Resources category
- If we achieve the aim of a large majority of the resource as Indicated Resources (as opposed to lower-confidence Inferred Resources), we will be able to launch into a Scoping Study for a Phase-1 open pit based on higher-confidence resources
- This, in conjunction with ancillary studies on metallurgical recoveries and geotechnical test work, could provide the base information for a Scoping Study that has robust and publicly reportable outcomes

Additionally, there is good evidence that there are extensions to shallow mineralisation yet to be properly drilled to the SE and NW – these extensions are a priority for the next few months.

# Cayley Lode Discovery – Resource Drilling Long Section

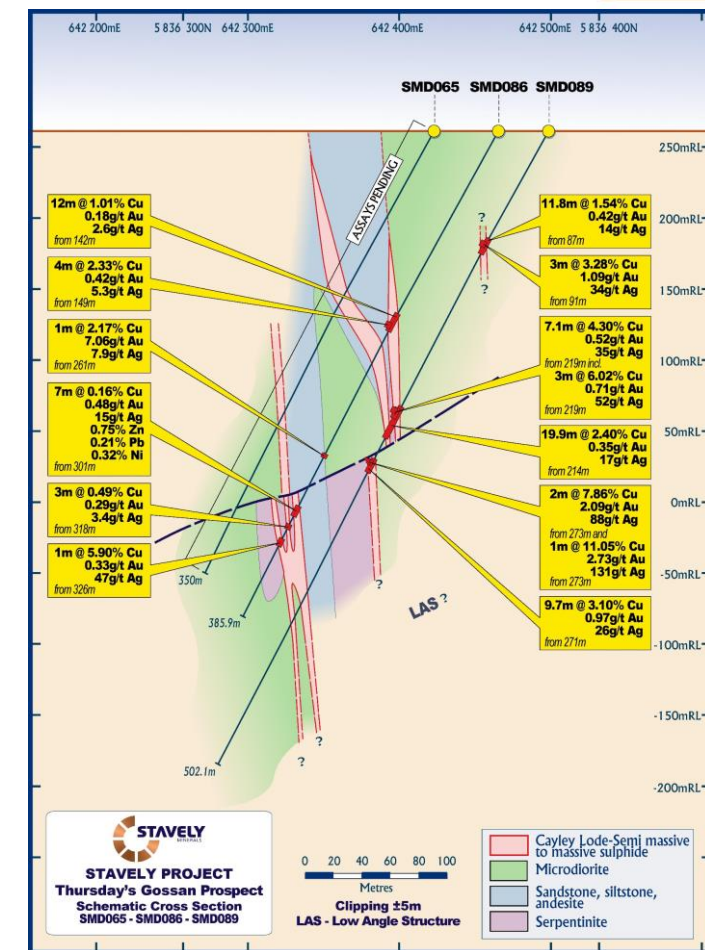

# Cayley Lode Discovery – Latest Cross Sections

- SMD087**
- 87m @ 1.74% Cu, 0.57g/t Au and 20g/t Ag, incl.
  - 24m @ 4.19% Cu, 1.27g/t Au and 53g/t Ag, and
  - 9m @ 4.09% Cu, 1.83g/t Au and 39g/t Ag

- SMD088**
- 30m @ 1.98% Cu, 0.23g/t Au and 9.1g/t Ag, incl.
  - 10.8m @ 3.20% Cu, 0.31g/t Au and 16g/t Ag, and
  - 5.8m @ 3.54% Cu, 0.43g/t Au and 14g/t Ag
  - 50.5m at 0.88% Cu, 0.11g/t Au and 3.8g/t Ag, incl.
  - 11.7m @ 1.42% Cu, 0.15g/t Au and 4.5g/t Ag, and
  - 15.6m @ 1.26% Cu, 0.17g/t Au and 5g/t Ag, and
  - 4.4m @ 1.61% Cu, 0.20g/t Au and 5.7g/t Ag

- SMD089**
- 11.8m @ 1.54% Cu, 0.42g/t Au and 14g/t Ag
  - 19.9m @ 2.40% Cu, 0.35g/t Au and 17g/t Ag
  - 9.7m @ 3.10% Cu, 0.97g/t Au and 26g/t Ag

See ASX announcement 15/06/2020 and 14/07/2020 and available from [www.stavely.com.au](http://www.stavely.com.au)

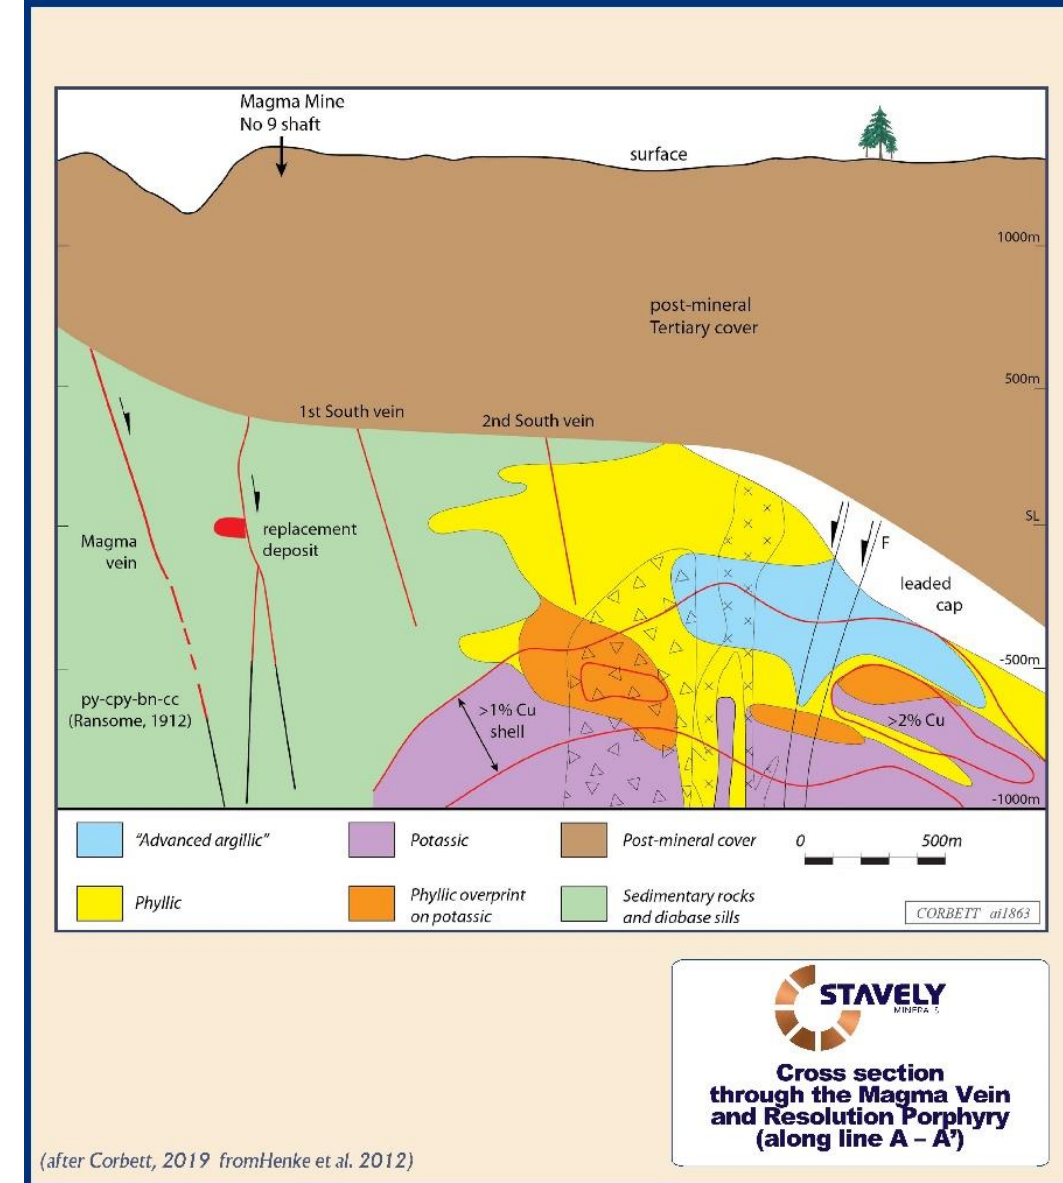

# Butte / Magma Copper Lode-Style

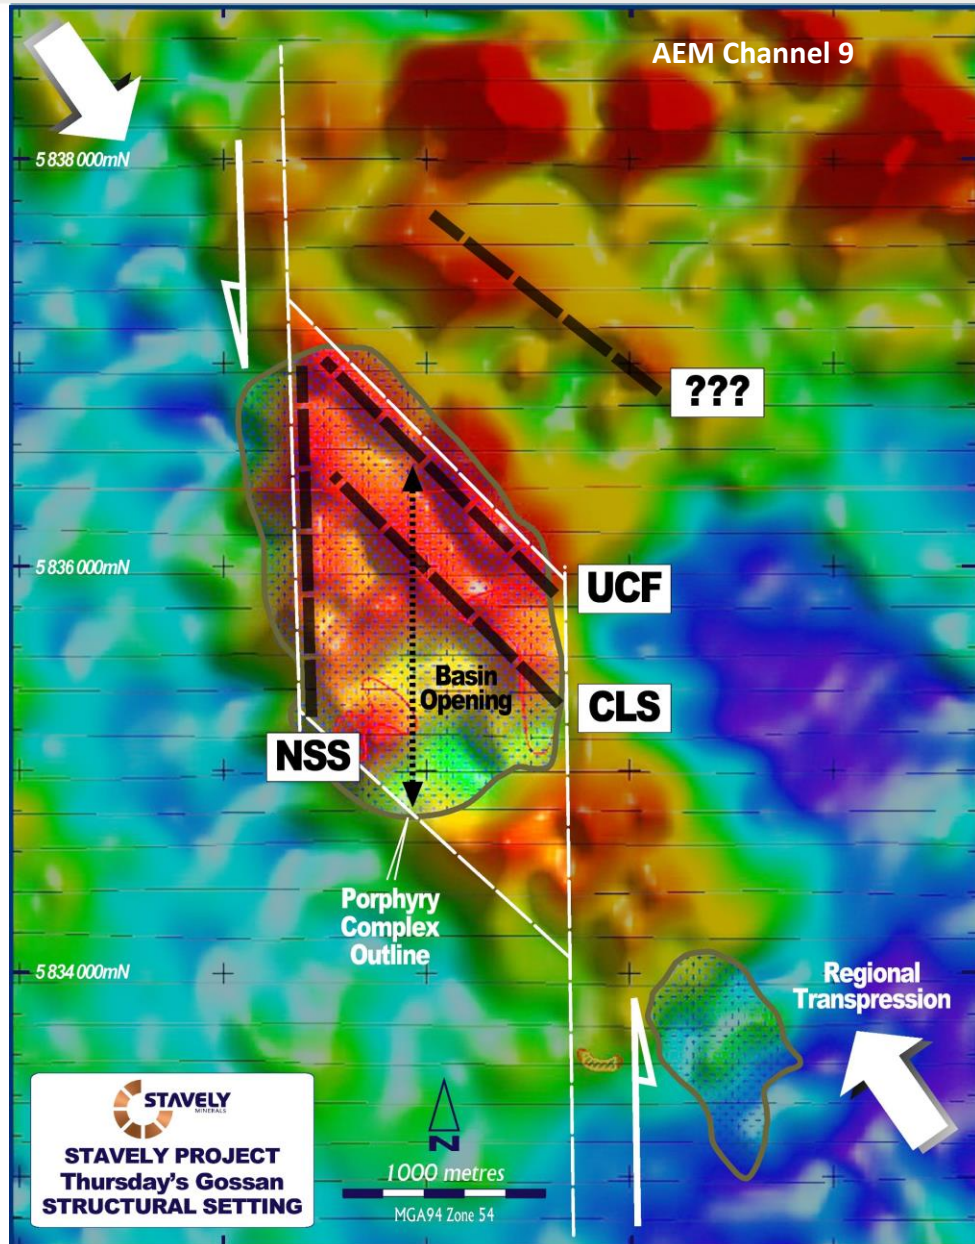

- Mineralisation at Thursday's Gossan is similar to the Butte (Montana) and Magma (Arizona) deposits:
  1. *High-grade, structurally-controlled lode-style copper-gold-silver systems*
  2. *Vertically and laterally extensive*
  3. *Mineralised on multiple structures*
  4. *Sulphide species are zoned laterally and vertically*
  5. *Metal source at depth (the porphyry)*

**This style of deposit has never before been seen in Australia and represents a hugely exciting exploration target**

# Cayley Lode – Tip of the Iceberg?

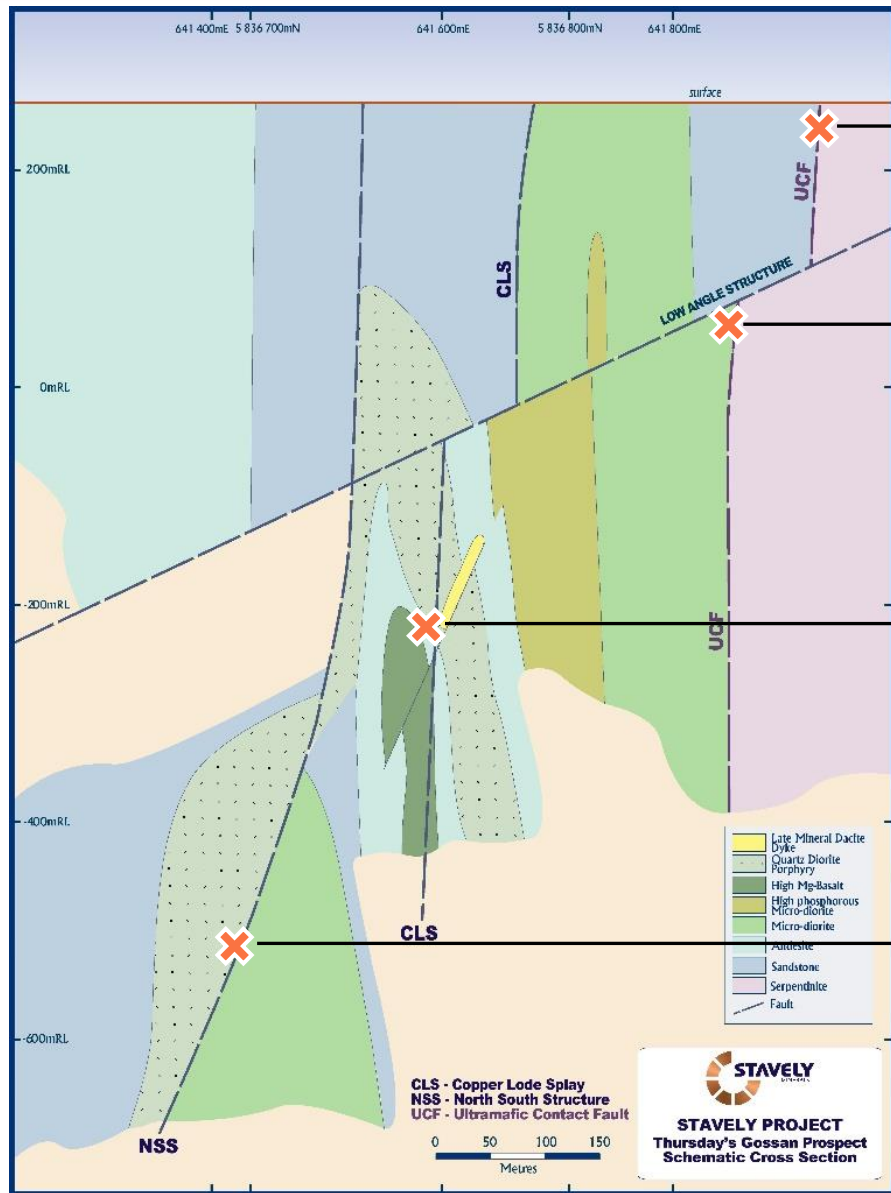

- Three major structurally controlled mineralised structures identified to date:
  1. *Ultramafic Contact Fault (UCF) – Cayley Lode*
  2. *Copper Lode Splay (CLS)*
  3. *North-South Structure (NSS)*
- Significant intercepts achieved on the CLS and NSS during previous drilling targeting a major porphyry at depth

The Cayley Lode discovery is a game-changer for the Stavely Project. It shows that we could be in the early discovery stages of a new copper province.

# Vertically Extensive – With Multiple Discovery Opportunities

**SMD050: 32m at 5.88% copper, 1.00g/t gold and 58g/t silver, from 62m drill depth on the UCF**

**SMD059: 18m at 1.00% copper, 0.1g/t gold and 3g/t silver, from 235m drill depth on the UCF underneath the LAS**

**SMD032: 6m at 6.73% copper, 0.84g/t gold and 15g/t silver, from 538m drill depth on the CLS**

**SMD044: 10m at 2.43% copper, 0.30g/t gold and 11g/t silver, from 583m drill depth on the CLS**

**SMD044: 38.3m at 1.59% copper, 0.27g/t gold and 8g/t silver, from 890m drill depth on the NSS**

**SMD044W1: 18m at 3.62% copper, 0.28g/t gold and 15g/t silver, from 848m drill depth on the NSS**

See ASX announcements 17/12/2019, 26/09/2019, 23/04/2019, 12/03/2019, 18/12/2018 and available from [www.stavely.com.au](http://www.stavely.com.au)

# Current Programs – Systematic Exploration Approach

1. Complete shallow Resource drill-out on Ultramafic Contact Fault (Cayley Lode)
2. Continue to define mineralisation on the Ultramafic Contact Fault below the Low Angle Structure
3. Bring mineralisation in the Copper Lode Splay closer to surface
4. Extend the Copper Lode Splay at depth
5. Bring mineralisation in the North-South Structure closer to surface
6. Test regional targets

Big Bang opportunity – find the porphyry, it's still out there!

# Current Programs – How do we see this as a possible development?

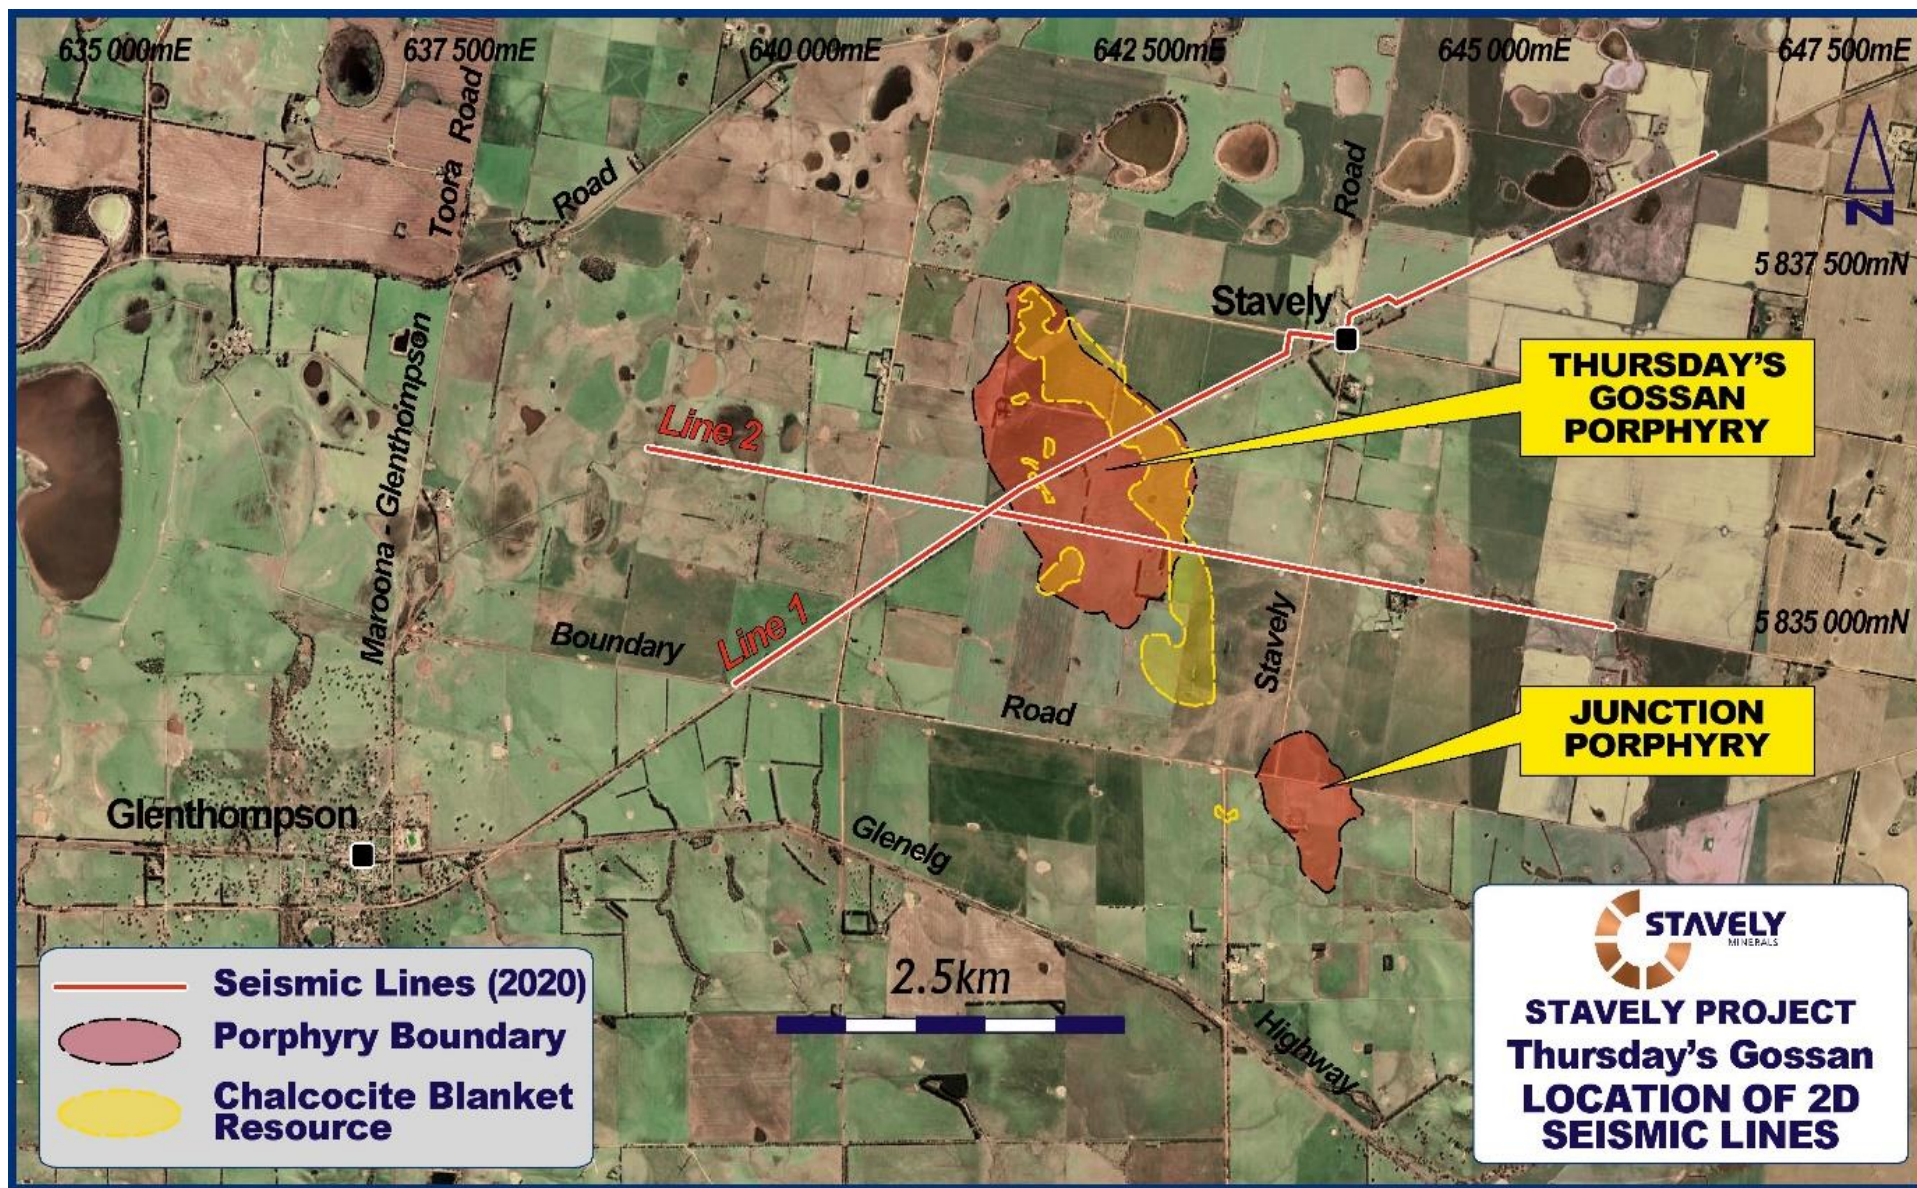

1. A Phase-1 open pit based on high-grade structurally-controlled mineralisation drives an open pit that also captures a significant proportion of the 28Mt at 0.4% copper secondary chalcocite-enriched blanket
2. A Phase-2 underground is developed from the base of the Phase-1 open pit and spirals between mineralised lodes on either side of the decline
3. Additional lodes are accessed from existing infrastructure
4. If continuity of mineralisation is confirmed to depths in excess of 1km – and we have intercepted mineralisation at ~1,150m drill depth in SMD045W2\* – then at a vertical rate of mining advance of 50m-60m per year, we can envisage a multi-decade underground mine life after the Phase-1 open pit

\*See ASX announcement 18 June 2019 and available from [www.stavely.com.au](http://www.stavely.com.au)

# Seismic Survey Lines – The Porphyry is Still Out There

See ASX announcement 15/07/2020 and available from [www.stavelly.com.au](http://www.stavelly.com.au)

## Interpreted Alteration Surfaces

- This model of porphyry intrusives and their associated alteration haloes is presented independently of the host lithologies for the sake of clarity, since it is considered to be the mineralisation model for this project
  - Seismic data supports the presence of two porphyry intrusions separated spatially by about 1400m.
  - The northern porphyry is proposed to have been emplaced later, with its alteration halo overprinting that of the southern porphyry
- Inset: Sillitoe schematic model, 1995.

HiSeis

See ASX announcement 15/07/2020 and available from [www.stavely.com.au](http://www.stavely.com.au)

Please view the narrated seismic results animation at [www.stavely.com.au/technical-data](http://www.stavely.com.au/technical-data)

- Complete Mineral Resource drill-out of shallow (0-200m) mineralisation of the Cayley Lode – this is the material that will be available to an open pit optimisation
- Commence Scoping Study on Phase 1 Open Pit Development
- Re-deploy drills to define the Cayley Lode at depth – this will lay the foundation for a Phase 2 underground
- Bring in parallel mineralised structures ie. the Copper Lode Splay – this could be accessed by the same underground infrastructure and may influence the Phase 1 Open Pit
- The objective is to demonstrate that a Phase 1 Open Pit underpins the development and the underground represents a multi-decade mine-life accessing multiple mineralised structures –
  - *lots of drilling to be done*
  - *Metallurgy and geotechnical studies commencing, environmental and ground water monitoring about to commence*
  - *Modifying Factors yet to be applied in various stages of economic studies*
- Drill test the porphyry targets
- Drill test regional targets

# Strongly Embedded in the Local Community

- Over \$30 million invested in the Project to date
- Vast bulk of that investment directed to Victorian businesses, contractors and employees
- Committed to best practice in environmental management
- Committed to engage positively and proactively with local communities

*“We are very cognisant of our responsibility to contribute into the local community and not just helicopter a WA team into western Victoria on a fly-in, fly-out basis.” – Stavely Executive Chair, Chris Cairns*

Discovery team: Dr Greg Corbett, Dr Michael Agnew, Chris Cairns, Stephen Johnson, Hamish Forgan – missing – Jennifer Murphy

# Summary – Key Investment Takeaways

- ✓ First-mover position (1,461km<sup>2</sup>) in a potential new world-class copper province
- ✓ Recent discovery of structurally-controlled high-grade lode-style copper-gold-silver mineralisation similar to the Magma (Arizona) and Butte (Montana) deposits
- ✓ Intercepts across three structures ranging from surface to 1,100m drill depth – “tall” system
- ✓ Shallow resource drill-out underway targeting ~20% of one of the three potentially mineralised structures identified to date – plenty of potential to identify others
- ✓ Outstanding potential for additional discoveries from regional targets
- ✓ Likely to be driven by a late-stage porphyry that is yet to be identified – it’s still out there!
