Clarification of WHIZZARD product launch announcement

Linus Technologies Limited (ASX: LNU) (**Linus**) wishes to clarify its announcement of the launch of the WHIZZARD product made to ASX on 25 November 2020.

Linus is collaborating with Amazon Web Services (AWS) to host the WHIZZARD platform on AWS. Linus is an AWS Partner Network (APN) Technology Partner, and like other businesses within the APN, can unlock funding support for training, new product and solution development, and go-to-market activities.

Linus has been approved by AWS for funding support for the WHIZZARD go to market activities. Whilst Linus does not consider the level of funding itself as material, the collaboration and hosting of WHIZZARD on AWS is material as it demonstrates a deepening of Linus' relationship with AWS and opportunities for co-marketing of the WHIZZARD product suite.

This announcement has been authorised for release to ASX by Gerard Bongiorno, Linus Executive Chairman.

About Linus Technologies Limited:

Linus is a global software-as-a-service company headquartered in Australia, with operations in London, New York and Europe. Linus has invented and patented the Video Virtualization Engine™ (VVE), which indexes, analyzes and tags each frame in a conventional video file and transforms it into a fully searchable Virtualized Video.

Linus' technology exposes the data that makes up the video file, making cumbersome video as flexible as all other forms of data. Accessing the data within the video file is the missing link for video cloud service providers, creating unparalleled value across the internet video industry. Linus' VVE powered hyper-personalization and search solution enables anyone to instantly search the data within video, from across an infinite number of sources, and automatically assemble the results in a single stream on-the-fly. No human hands required.
