

# ASX Announcement

## Carlow Castle Update – Outstanding Drilling Results

16 December 2020

### Highlights

Further new batches of assays received from the recently completed 42-hole, multi-rig drilling campaign at the Carlow Castle Gold Copper Project.

**Step out RC holes to extend Resource Area 50m to the South.**

- 44m @ 2.00g/t Au, 0.71% Cu, 0.15% Co from 132m; ARC 253.
- 5m @ 2.40g/t Au, 0.63% Cu, 0.09% Co from 82m; ARC252.

**New Northern Discovery Zone - Shallow Reconnaissance RC holes ~250m North of the Resource Area;**

- 11m @ 4.24g/t Au, 1.58% Cu from 71m ARC 233.
- 6m @ 1.33g/t Au, 0.93% Cu, 0.08 % Co from 102m (to EOH); ARC234.

**First Resource Area Infill Diamond Holes 20CCAD002 & 004.**

- 53m @ 2.98g/t Au, 0.85% Cu, 0.25% Co from 120m; 20CCAD004, including;
  - 14m @ 4.92g/t Au, 0.14% Cu from 120m
  - 8m @ 7.34g/t Au, 1.03% Cu from 144m, including
  - 2m @ 17.93g/t Au, 2.36% Cu from 147m
  - 19m @ 1.59g/t Au, 1.06% Cu, 0.15% Co from 155m.
- 75m @ 1.15g/t Au, 0.36% Cu, 0.05% Co from 56m; 20CCAD002, including;
  - 5m @ 1.86g/t Au, 0.43% Cu, 0.1% Co from 69m; 20CCAD002.
  - 7m @ 1.49g/t Au, 0.70% Cu, 0.22% Co form 84m; 20CCAD002.

**Shallow Reconnaissance RC holes ~100m East of Resource Area;**

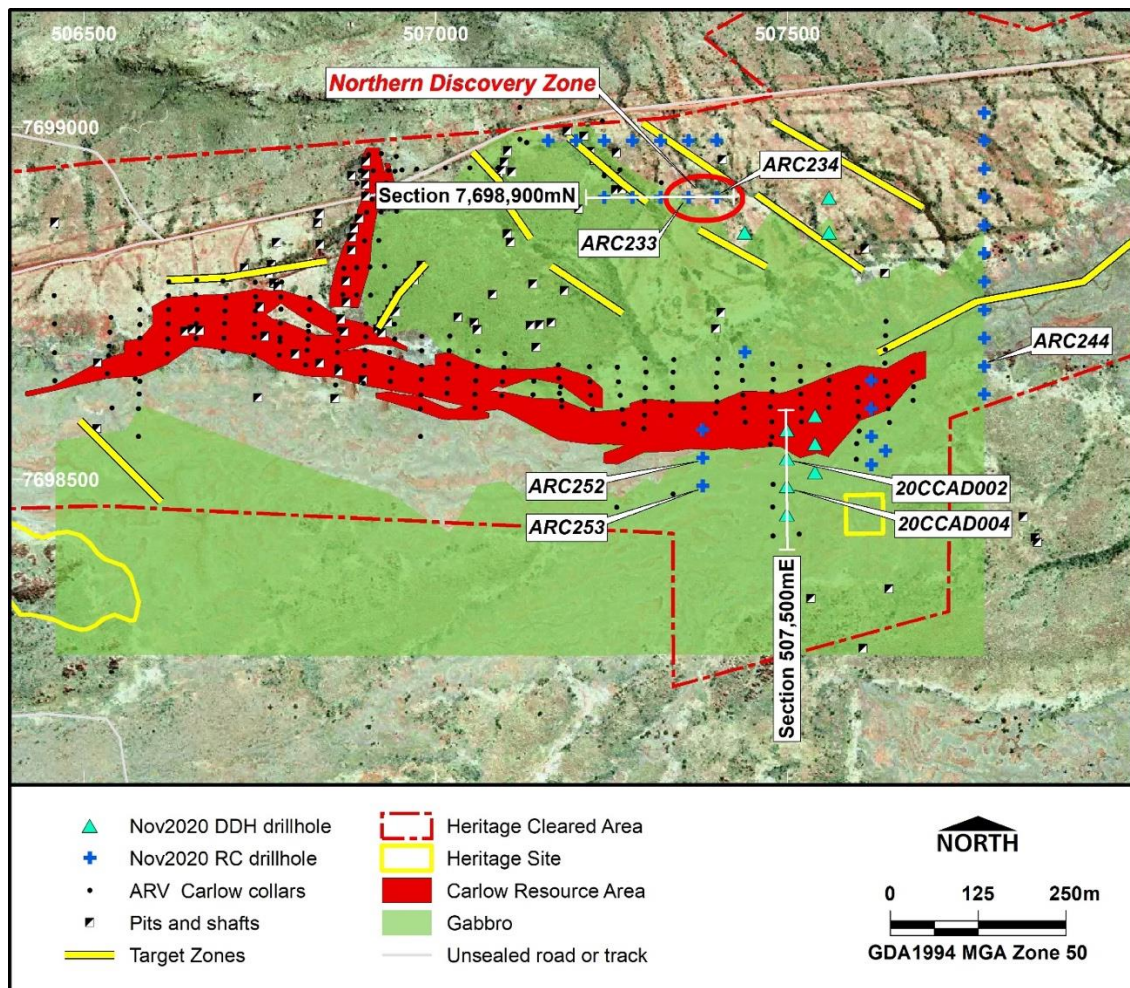

- 1m @ 1.57g/t Au, 0.01% Cu from 75m; ARC244.
- 1m @ 7.43g/t Au, 0.04% Cu from 113m; ARC244.

**Artemis Resources Limited** (“Artemis” or “the Company”) (ASX:ARV, Frankfurt: ATY, US OTCQB: ARTTF) is pleased to provide an update on the continuing drill programmes on its 100%-owned Carlow Castle in the west Pilbara region of Western Australia.

**Alastair Clayton, Executive Director commented:** “These outstanding results from the latest batch of assays from Carlow Castle further underlines our belief in the potential for this project to be a regionally significant gold-copper-cobalt resource.

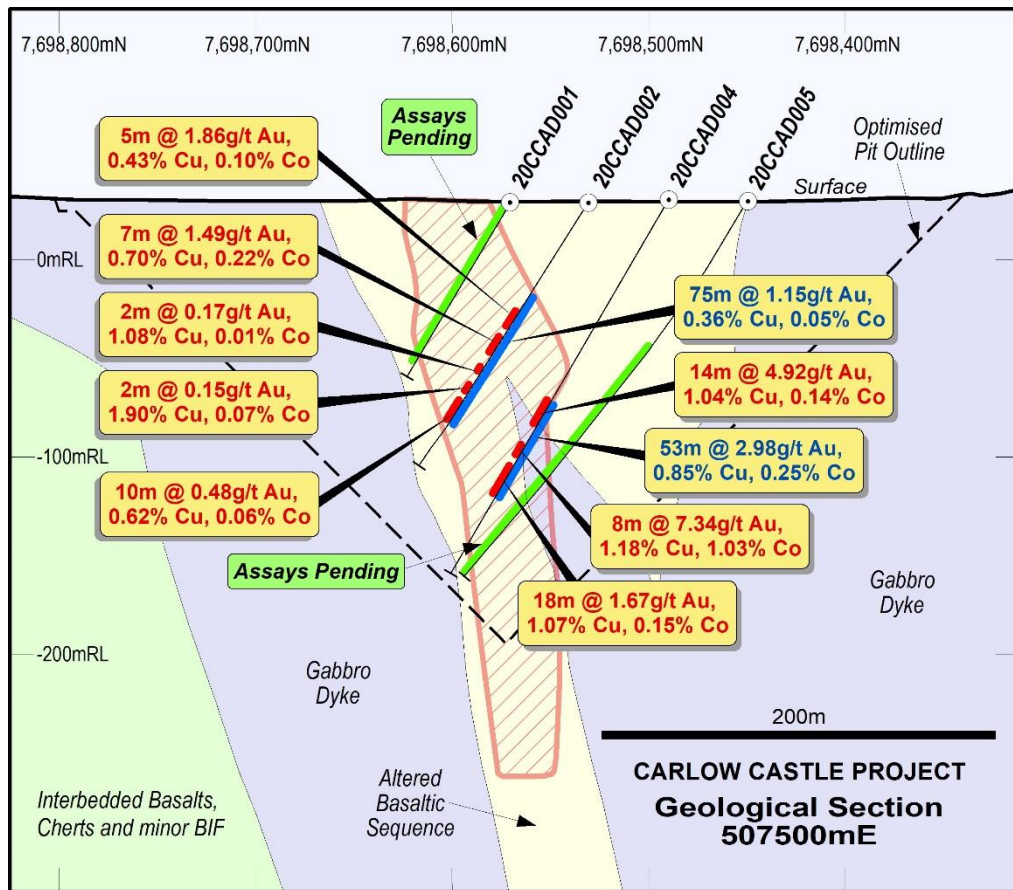

Step out drilling to grow the resource to the South has hit impressive grades over some very large widths and infill diamond grade and structural drilling to support future resource upgrades just highlights the impressive characteristics of the gold, copper and cobalt mineralisation at Carlow Castle. Drilling has discovered a totally new zone of shallow, high grade gold and copper mineralisation over 250m north of the Carlow Castle Resource Area. This new Northern Discovery Zone will be immediately followed up as part of a 10,000m RC drill programme that is due to commence before Christmas.

We are expecting more assays to be available in the coming weeks, including much of the deeper diamond drilling that targeted further examples of the high-grade gold mineralisation discovered below the existing resource shells\*. Our Paterson Central 2020 update is also due imminently.”

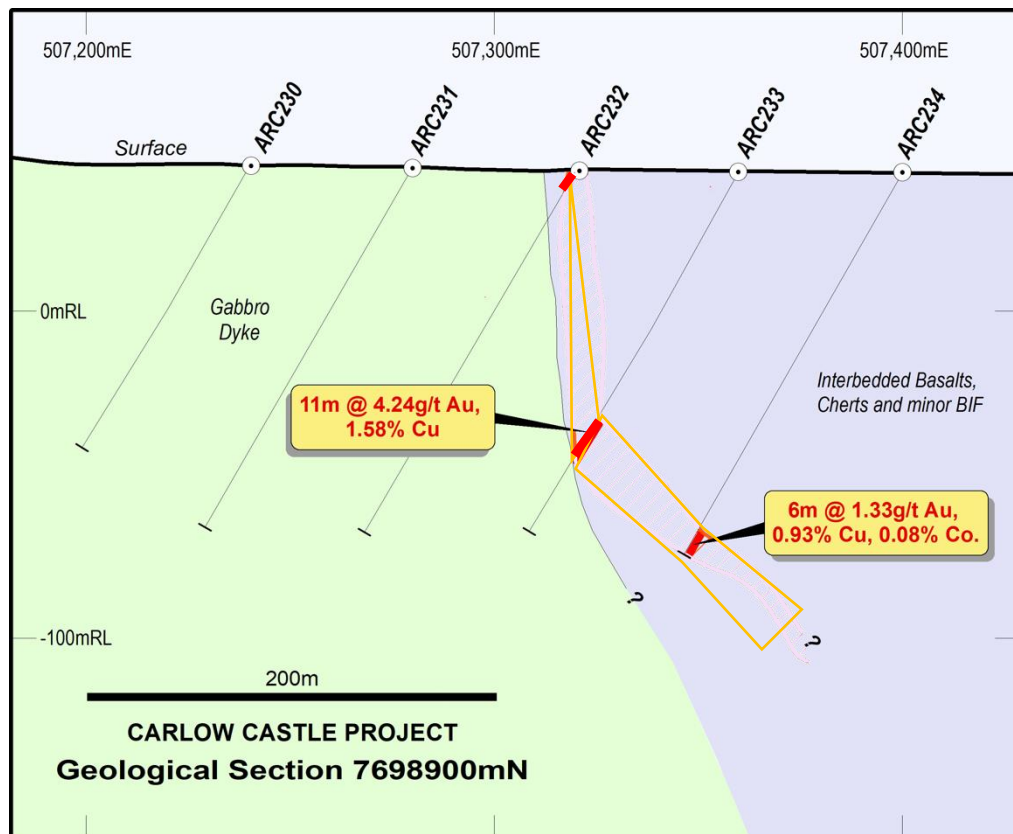

**Figure 1:** Carlow Castle current programme: DDH and RC hole locations (red) with previous drill collars, and 2019 inferred Mineral Resource Estimate (MRE) wireframe outline (as released to the ASX on 20 November 2019), with the line of interpretive drill sections 507530mE +/-30m and 7698900mN +/-10m shown.

\*see “Carlow Castle Update – Carlow Deep Gold Discovery, 23 November 2020.

**Figure 2:** Carlow Castle current programme: Interpretive drill section 507530mE +/-30m showing DDH hole intersections with 2019 inferred Mineral Resource Estimate (MRE) wireframe outline (as released to the ASX on 20 November 2019).

**Figure 3:** Carlow Castle current programme: Interpretive drill section 7698900mN +/-10m showing RC hole intersections in the Northern Discovery zone.

## Summary of Drilling at Carlow Castle

Drilling at Carlow Castle has currently ceased with results from Diamond drilling and Reverse Circulation (RC) drilling continuing to come in. Most recent results are highlighted in Figure 1 and in sectional interpretations in Figures 2 and 3. Table 1 highlights significant intercepts to date and also highlights the number of pending assays.

The results continue to impress the technical team and we look forward to restarting RC drilling later this week, with the commitment of another 10,000 metres.

RC drilling will cease for the Christmas break and resume on or around 6 January 2021. Diamond drilling will also restart on the 6 January 2021, and will complete the remaining 1,000 metres within the eastern Mineral Resource Estimate area. Once the diamond drilling is completed, CSA Global will complete the structural model for the Carlow Castle deposit.

### COMPETENT PERSONS STATEMENT:

The information in this announcement that relates to Exploration Results and Exploration Targets is based on information compiled or reviewed by Allan Younger, who is a Member of the Australasian Institute of Mining and Metallurgy. Mr Younger is an employee of Artemis Resources Limited. Mr Younger has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr Younger consents to the inclusion in the announcement of the matters based on his information in the form and context in which it appears.

### About Artemis Resources

Artemis Resources (ASX: ARV; FRA: ATY; US: ARTTF) is a Perth-based exploration and development company, led by an experienced team that has a singular focus on delivering shareholder value from its Pilbara gold projects – the Greater Carlow Gold Project in the West Pilbara and the Paterson Central exploration project in the East Pilbara.

For more information, please visit [www.artemisresources.com.au](http://www.artemisresources.com.au)

This announcement was approved for release by the Board.

**SECTION 1 SAMPLING TECHNIQUES AND DATA**

(Criteria in this section apply to all succeeding sections.)

Criteria	Commentary
<b>Sampling techniques</b>	<ul style="list-style-type: none"> <li>Reverse circulation drilling was used to obtain 1 m samples.</li> <li>Samples were collected on a 1m basis and stockpiled.</li> <li>The single metre samples of any composite sample reporting greater than 0.1g/t Au were retrieved and assayed.</li> <li>All samples were pulverized produce a 50 g charge for fire assay.</li> </ul>
<b>Drilling techniques</b>	<ul style="list-style-type: none"> <li>Reverse Circulation drilling by KTE Drilling.</li> <li>Diamond drilling by Topdrill</li> </ul>
<b>Drill sample recovery</b>	<ul style="list-style-type: none"> <li>Drilling recoveries for Reverse circulation drilling were excellent, with all samples dry.</li> </ul>
<b>Logging</b>	<ul style="list-style-type: none"> <li>Artemis Reverse Circulation drilling has been logged;</li> <li>Diamond core processing is ongoing</li> </ul>
<b>Sub-sampling techniques and sample preparation</b>	<ul style="list-style-type: none"> <li>The RC drilling rig was equipped with a rig-mounted cyclone and static cone splitter, which provided one bulk sample of approximately 20-30 kilograms, and a representative sub-sample of approximately 2-4 kilograms for every metre drilled.</li> <li>The sample size of 2-4 kilograms is appropriate and representative of the grain size and mineralisation style of the deposit.</li> </ul>
<b>Quality of assay data and laboratory tests</b>	<ul style="list-style-type: none"> <li>ALS (Perth) were used for all analysis of drill samples submitted by Artemis. The laboratory techniques below are for all samples submitted to ALS and are considered appropriate for the style of mineralisation defined within the Carlow Castle Project area: <ul style="list-style-type: none"> <li>Samples above 3Kg riffle split.</li> <li>Pulverise to 95% passing 75 microns</li> <li>50-gram Fire Assay (Au-AA26) with ICP finish - Au.</li> <li>4 Acid Digest ICP-AES Finish (ME-ICP61) – Ag, Al, As, Ba, Be, Bi, Ca, Cd, Co, Cr, Cu, Fe, Ga, K, La, Mg, Mn, Mo, Na, Ni, P, Pb, S, Sb, Sc, Sr, Th, Ti, Tl, U, V, W, Zn.</li> <li>Ore Grade 4 Acid Digest ICP-AES Finish (ME-OG62)</li> </ul> </li> <li>Standards were used for external laboratory checks by Artemis.</li> <li>Duplicates were used for external laboratory checks by Artemis.</li> </ul>
<b>Verification of sampling and assaying</b>	<ul style="list-style-type: none"> <li>Electronic data capture, storage and transfer as .csv. Routine QC checks performed by contractor and independent geophysical consultant. Data were found to be of high quality and in accordance with contract specifications</li> <li>Laboratory standards and blank samples were inserted at regular intervals and some duplicate samples were taken for QC checks.</li> </ul>
<b>Location of data points</b>	<ul style="list-style-type: none"> <li>A Garmin GPSMap62 hand-held GPS was used to define the location of the drill hole collars. Standard practice is for the GPS to be left at the site of the collar for a period of 5 minutes to obtain a steady reading. Collar locations are considered to be accurate to within 5m.</li> <li>Hole collars will be picked up by licensed surveyors on completion of the drilling.</li> <li>Zone 50 (GDA 94).</li> </ul>
<b>Data spacing and distribution</b>	<ul style="list-style-type: none"> <li>Current drill hole spacing is variable and dependent on specific geological, and geochemical targets.</li> <li>No sample compositing has been used for drilling completed by Artemis. All results reported are the result of 1 metre downhole sample intervals.</li> </ul>
<b>Orientation of data in relation to geological structure</b>	<ul style="list-style-type: none"> <li>Drill holes were designed to be perpendicular to the strike of known mineralisation. Due to the structural and geological complexity of the area, it is mineralisation of unknown orientation can be intersected.</li> </ul>
<b>Sample security</b>	<ul style="list-style-type: none"> <li>The chain of custody is managed by the supervising geologist who places calico sample bags in polyweave sacks. Up to 10 calico sample bags are placed in each sack. Each sack is clearly labelled with: <ul style="list-style-type: none"> <li>Artemis Resources Ltd</li> <li>Address of laboratory</li> </ul> </li> </ul>

Criteria	Commentary
	<ul style="list-style-type: none"> <li>○ Sample range</li> <li>● Samples were delivered by Artemis personnel to the transport company in Karratha and shrink wrapped onto pallets.</li> <li>● The transport company then delivers the samples directly to the laboratory.</li> </ul>
<b>Audits or reviews</b>	<ul style="list-style-type: none"> <li>● Data is validated upon up-loading into the master database. Any validation issues identified are investigated prior to reporting of results.</li> </ul>

## SECTION 2 REPORTING OF EXPLORATION RESULTS

(Criteria listed in the preceding section also apply to this section.)

Criteria	Commentary
<b>Mineral tenement and land tenure status</b>	<ul style="list-style-type: none"> <li>● Drilling by Artemis was carried out on E47/1797 – 100% owned by Artemis Resources Ltd. This tenement forms a part of a broader tenement package that comprises the West Pilbara Project.</li> <li>● This tenement is in good standing.</li> </ul>
<b>Exploration done by other parties</b>	<ul style="list-style-type: none"> <li>● The most significant work to have been completed historically in the Carlow Castle area, including the Little Fortune and Good Luck prospects, was completed by Open Pit Mining Limited between 1985 and 1987, and subsequently Legend Mining NL between 1995 and 2008.</li> <li>● Work completed by Open Pit consisted of geological mapping, geophysical surveying (IP), and RC drilling and sampling.</li> <li>● Work completed by Legend Mining Ltd consisted of geological mapping and further RC drilling.</li> <li>● Legend also completed an airborne ATEM survey over the project area, with follow up ground-based FLTEM surveying. Re-processing of this data was completed by Artemis and was critical in developing drill targets for the completed RC drilling.</li> <li>● Compilation and assessment of historic drilling and mapping data completed by both Open Pit and Legend has indicated that this data compares well with data collected to date by Artemis. Validation and compilation of historic data is ongoing.</li> <li>● All exploration and analysis techniques conducted by both Open Pit and Legend are considered to have been appropriate for the style of deposit.</li> </ul>
<b>Geology</b>	<ul style="list-style-type: none"> <li>● The Carlow Castle Co-Cu-Au prospect includes a number of mineralised shear zones, located on the northern margin of the Andover Intrusive Complex. Mineralisation is exposed in numerous workings at surface along numerous quartz rich shear zones. Both oxide and sulphide mineralisation are evident at surface associated with these shear zones.</li> <li>● Sulphide mineralisation appears to consist of Chalcopyrite, chalcocite, cobaltite, pyrrhotite and pyrite</li> </ul>
<b>Drill hole Information</b>	<ul style="list-style-type: none"> <li>● Drill hole information is contained within this release.</li> </ul>
<b>Data aggregation methods</b>	<ul style="list-style-type: none"> <li>● All intervals reported are composed of 1 metre down hole intervals for Reverse Circulation drilling, and sample intervals are used for Diamond core are 1m intervals only and not length weighted.</li> <li>● No upper or lower cut-off grades have been used in reporting results.</li> <li>● No metal equivalent calculations are used in this report.</li> </ul>
<b>Relationship between mineralisation widths and intercept lengths</b>	<ul style="list-style-type: none"> <li>● True widths of mineralisation have not been calculated for this report, and as such all intersections reported are down-hole thicknesses.</li> <li>● A better understanding of the deposit geometry will be achieved on thorough interpretation of the data. True thicknesses may be reported at a later date if warranted. Due to the moderately to steeply dipping nature of the mineralised zones, it is expected that true thicknesses will be less than the reported down-hole thicknesses.</li> </ul>
<b>Diagrams</b>	<ul style="list-style-type: none"> <li>● Appropriate plans are shown in the text.</li> </ul>
<b>Balanced reporting</b>	<ul style="list-style-type: none"> <li>● Reporting of results in this report is considered balanced.</li> </ul>

Criteria	Commentary
<b><i>Other substantive exploration data</i></b>	<ul style="list-style-type: none"> <li>Targeting for the RC drilling completed by Artemis was based on compilation of historic exploration data, and the surface expression of the targeted mineralised shear zones and associated historic workings.</li> </ul>
<b><i>Further work</i></b>	<ul style="list-style-type: none"> <li>The results at the Carlow Castle Co-Cu-Au project warrant further drilling. The drill programme results to date are considered excellent.</li> <li>An IP programme and detailed low level aeromagnetic survey are scheduled to be completed in the coming weeks.</li> </ul>
