

ASX: TSO | **ACN** 106 854 175

El Zorro Drilling Continues to Expand Ternera 213.50m @ 0.73g/t Au,

34.60m @ 1.29g/t Au, including 5.60m @ 4.37g/t Au 39.00m @ 1.22g/t Au including 5.00m @ 9.09g/t Au

- Assays received for seven holes, ZDDH00058, ZDDH00059, ZDDH00060, ZDDH00061, ZDDH00063, ZDDH00064 and ZDDH00066 at El Zorro, further expanding the scale of the mineralised zone at the Ternera prospect (Ternera).
- Holes ZDDH00059, ZDDH00063 and ZDDH00066 intersected broad mineralised gold zones further expanding the Ternera mineralised zone to the north east and south.
- Significant intercepts include:
 - ZDDH00059
 - 87.50m @ 0.72g/t Au from 194.50m including:
 - 34.60m @ 1.29g/t Au from 207.00m; and
 - 5.60m @ 4.37g/t Au from 236.00m.
 - ZDDH00063
 - 166.00m @ 0.57g/t Au from 166.00m including:
 - 39.00m @ 1.22g/t Au from 277.00m;
 - 16.00m @ 2.96g/t Au from 300.00m; and
 - 5.00m @ 9.09g/t Au from 311.00m.
 - ZDDH00066
 - 137.00m @ 0.51g/t Au from 306.00m including:
 - 47.00m @ 1.00g/t Au from 389.00m;
 - 23.00m @ 1.09a/t Au from 389.00m; and
 - 19.00m @ 1.24g/t Au from 424.00m.
- Additional sampling completed for hole ZDDH00029 has extended the overall mineralised drill intercept (previously reported to ASX on 26 August 2020) by 37.00m:
 - 213.50m @ 0.73g/t Au from 29.50m including:
 - 63.50m @ 1.81g/t Au.

Including previously unreported mineralisation of:

- 15.00m @ 1.33g/t Au from 180.00m.
- Results confirm continuity of a wide mineralised zone to the south and new extension of mineralisation to the north east.
- Mineralisation remains open in all directions.
- 52 holes completed at El Zorro, for 15,382m, with assays outstanding for 15 holes.

- \$21 million capital raising underpins aggressive exploration program at El Zorro.
- 30,000m resource definition and extensional drill programs planned for Q1 2021.
- Maiden drilling planned for Toro Gordo target in January 2021.
- Scoping Study activities scheduled to commence January 2021.

Tesoro Resources Limited (Tesoro or **the Company)** (ASX: TSO) is pleased to announce assay results for seven diamond drill holes completed at Ternera, and additional sampling results for hole ZDDH00029 on the Company's El Zorro Gold Project (**El Zorro**) in Chile. All holes returned positive results for gold mineralisation, further expanding the drilled mineralised zone at Ternera.

Ternera is the first of six targets identified at El Zorro to be drilled.

Tesoro Managing Director, Zeff Reeves commented:

"Another set of solid results from Ternera, demonstrating the continuity of the broad mineralised zone extending to the south and a significant new zone of mineralisation to the north, northeast of the deposit. The additional sampling from hole ZDDH0029 has identified more mineralisation at depth with that hole now returning an intercept over 213.50m, which demonstrates the potential for Ternera to be continuously mineralised from the surface to depth."

Significant intercepts returned are presented in Table 1. A full table of significant intercepts is presented in Appendix 1.

COMMENTARY

As previously reported (ASX Announcement - 26 August 2020) hole **ZDDH00029** returned a wide mineralised intercept associated with the CC475, CC450 and CC425 faults and adjacent sheeted veining. The hole was reviewed and additional sampling was undertaken, which has extended mineralisation associated with the CC425 and increased the entire intercept by 37.00m to 213.50m @ 0.73g/t Au from 29.50m.

ZDDH00058 returned a low-grade intercept of 13.00m @ 0.47m from 237.00m, within sediment and associated with quartz veins and the CC500 fault.

ZDDH00059 returned a broad intercept with multiple higher-grade zones associated with the CC400, CC375 and CC350 faults and demonstrated the continuity of mineralisation to the south of Ternera.

ZDDH00060 returned a narrow low-grade intercept of 12.00m @ 0.44g/t Au associated with tonalitic dykes. This hole was drilled approximately mid-way between two of the major controlling north-south faults.

ZDDH00061 returned two narrow intercepts associated with the CC450 and CC425 faults within sediments. The hole is interpreted to have drilled within a large fault block of barren sediment.

ZDDH00063 returned a broad zone of mineralisation extending the Ternera mineralised zone approximately 150m to the north east. Mineralisation is associated CC700 to CC750 faults and the north-south controlling 'Three Brothers Fault''. Higher grades associated with quartz veins and sheeted veins within El Zorro tonalite with strongest mineralisation within the Three Brothers fault zone. The hole adds an additional open area of mineralisation to the north east.

ZDDH00064 returned several narrower, lower grade intercepts associated with the CC300 and CC275 faults. The hole was drilled as infill, mid-way between two north-south faults.

ZDDH00066 returned a broad intercept within the El Zorro Tonalite and associated with the north-south trending Three Brothers fault and where the CC400, CC450 and CC500 faults join it. Higher

grade zones associated with quartz veining within the CC fault zones.

As additional results are received it has become evident that the major north-south faults are key controls on mineralisation with stronger zones of mineralisation close to and within these faults where they interact with the east-west CC fault system. Best results to date from the Ternera drilling are closely associated with the north-south fault with high grade locally occurring within the branching east-west CC faults.

NEXT STEPS

In total the Company has drilled 79 diamond drill holes for 20,959m at the Ternera deposit.

A further 30,000m resource definition and extensional drill program has been planned at Ternera in Q1 2021, with the aim of delineating a maiden resource estimate by June 2021, contingent upon the ultimate deposit size. Furthermore, a maiden drilling program will commence in January 2021 at the emerging Toro Gordo target to the south of Ternera. Toro Gordo will be the first target of six to be drilled outside of Ternera.

It is planned that initial Scoping Study activities and data collection will commence in January 2021 and run in parallel with the Company's exploration programs.

Tesoro remain focused on progressing the El Zorro Project through to development as quickly as possible.

About Tesoro

Tesoro Resources Limited was established with a strategy of acquiring, exploring and developing mining projects in the Coastal Cordillera region of Chile. The Coastal Cordillera region is host to multiple world class copper and gold mines, has well established infrastructure, service providers and an experienced mining workforce. Large areas of the Coastal Cordillera remain unexplored due to the unconsolidated nature of mining concession ownership, but Tesoro, via its in-country network and experience has been able secure rights to a district scale gold project in-line with the Company's strategy. Tesoro has rights to acquire up to 80% of the El Zorro Gold Project.

Competent Persons Statement

The information in this report that relates to Exploration Results is based on information compiled by Mr Zeffron Reeves (B App Sc (Hons) Applied Geology) MBA, MAIG). Mr Reeves is a member of the Australian Institute of Geoscientists and a Director and major shareholder of the Company. Mr Reeves has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Reeves consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.

Future Performance

This announcement may contain certain forward-looking statements and opinion. Forward-looking statements, including projections, forecasts and estimates, are provided as a general guide only and should not be relied on as an indication or guarantee of future performance and involve known and unknown risks, uncertainties, assumptions, contingencies and other important factors, many of which are outside the control of the Company and which are subject to change without notice and could cause the actual results, performance or achievements of the Company to be materially different from the future results, performance or achievements expressed or implied by such statements. Past performance is not necessarily a guide to future performance and no representation or warranty is made as to the likelihood of achievement or reasonableness of any forward-looking statements or other forecast. Nothing contained in this announcement nor any information made available to you is, or and shall be relied upon as, a promise, representation, warranty or guarantee as to the past, present or the future performance of Tesoro.

Drill hole details for holes completed to date in the current phase of drilling. Co-ordinate system is PSAD56-19S.

APPENDIX 3 – JORC TABLES

JORC Table 1

Section 1: Sampling Techniques and Data

Criteria	JORC Code explanation	Commentary
Sampling techniques	Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as downhole gamma sondes, or handheld XRF instruments, etc.). These examples should not be taken as limiting the broad meaning of sampling.	Tesoro has completed 79 diamond drill holes for 20,959m in 2017, 2018 and 2020 (ZDDH0001 to ZDDH0079). Diamond drill holes were drilled with HQ. Sampling was half core at geologically defined and significant mineralisation boundaries. Tesoro considers the sampling methodologies to be appropriate for this style of mineralisation.
	 Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used. 	Tesoro Diamond drill holes were drilled with HQ. Sampling was half core at geological and significant mineralisation boundaries. Tesoro consider this appropriate for the style of mineralisation.
	Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done, this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.	Diamond drilling was used to obtain ½ core samples of various lengths (minimum 0.25m), from which 1kg of material was pulverised passing 200 mesh to produce a 50g charge for fire assay fusion with a gravimetric finish. Multielement assays were completed by 4-acid digest with a 2.5g charge. Tesoro consider these appropriate assay techniques.
Drilling techniques	Drill type (e.g. core, reverse circulation, openhole hammer, rotary air blast, auger, Bangka, sonic, etc.) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc.).	Tesoro has completed 79 diamond drill holes for 20,959m. Diamond drill holes were drilled with HQ. Sampling was half core at geological and significant mineralisation boundaries. Standard tube was used.
Drill sample recovery	Method of recording and assessing core and chip sample recoveries and results assessed.	Core recovery was estimated using the drillers recorded depth marks against the length of the core recovered. Reviewing the core photos, there are occasional shears/faults where core is broken. There is however no significant core loss.
	Measures taken to maximise sample recovery and ensure representative nature of the samples.	A single tube system was employed and in general core recovery good.
	Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.	There appears to be no potential sample bias as there was no regular loss of core.
Logging	Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.	Geological core logging to a resolution of 25 cm was undertaken with a record kept of, inter alia, colour, lithology, weathering, grain size, mineralisation, alteration, geotechnical characteristics etc. Diamond core is stored at the Company's warehouse. Tesoro consider the data to be of an appropriate level of detail to curport a future resource estimation.
	Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc.) photography.	to support a future resource estimation. Logging of diamond core was qualitative and diamond core was photographed.
	The total length and percentage of the relevant intersections logged.	All drilled intervals are logged and recorded.
Subsampling techniques and	If core, whether cut or sawn and whether quarter, half or all core taken.	Drill core was cut, and half core was collected for analysis
sample preparation	If non-core, whether riffled, tube sampled, rotary split, etc. and whether sampled wet or dry.	Tesoro has not completed any percussion drilling.

Criteria	JORC Code explanation	Commentary
	For all sample types, the nature, quality and appropriateness of the sample preparation technique.	Collection of half core ensured the nature, quality and appropriateness of the collected sample. The sample preparation of crushing half core at the lab to mm size prior to splitting off a 50g charge (either by cone/quarter
	Quality control procedures adopted for all	or riffle) for pulverisation provides an appropriate and representative sample for analysis. Half core was collected for the entirety of the Tesoro drilling, as
	subsampling stages to maximise representivity of samples.	such there was consistency throughout the drilling. Core was logged by a qualified geoscientist. Each subsample is considered to be representative of the interval.
	 Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling. 	Sampling of half core is representative of the in-situ material. There are field duplicate samples collected from the diamond core with irregular results. Field drill core duplicates are irregular by nature and it has been recommended by Tesoro's consultants to use coarse reject material to monitor the sample preparation.
	Whether sample sizes are appropriate to the grain size of the material being sampled.	sample sizes collected were considered appropriate to reasonably represent the material being tested.
Quality of assay data and laboratory tests	The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.	Assays reported in this report were undertaken at the accredited laboratory of ALS Santiago, which is fully certified. Core samples of various lengths were assayed (minimum 0.25m) from which 1kg of material was pulverized passing 200 mesh to produce a 50 g charge for fire assay fusion with gravimetric finish. Multielement assays were completed by 4-acid digest with a 2.5 g charge. All techniques are appropriate for the element being
		determined.
	For geophysical tools, spectrometers, handheld XRF instruments, etc., the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.	Standard chemical analyses were used for grade determination. There was no reliance on determination of analysis by geophysical tools.
	Nature of quality control procedures adopted (e.g. standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (i.e. lack of bias) and precision have been established.	QAQC procedures included the insertion of Certified Reference Materials (CRMs) (5%) and blank material (2%), Check samples (5%) and check assaying 5% Cube Consulting Pty Ltd manage the database for Tesoro and note in there
		The laboratories used have generally demonstrated analytical accuracy at an acceptable level within 95% confidence limits.
Verification of sampling and assaying	The verification of significant intersections by either independent or alternative company personnel.	A number of independent consulting geoscientists (Cube Consulting, Oliver, and Cooley) external to Tesoro have verified the intersections for holes ZDDH0001 to ZDDH0016. Holes ZDDH0017 onwards have been verified by multiple appropriately qualified Company personnel.
	The use of twinned holes.	no twinned holes have been completed
	Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.	Tesoro drilling is digitally entered and stored following documented core handling protocols. The protocols are considered adequate.
	Discuss any adjustment to assay data.	No adjustments were made to Tesoro Drilling
Location of data points	Accuracy and quality of surveys used to locate drillholes (collar and downhole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.	Tesoro drill hole collars have been surveyed accurately using differential GPS for holes ZDDH0001 to ZDDH00027. Holes ZDDH0028 onwards have been surveyed using handheld GPS and will be surveyed using differential GPS once the drill program has concluded.
	Specification of the grid system used.	The grid system used PSAD56 19S
	Quality and adequacy of topographic control.	The topography generated from an accurate topographic survey data completed by a registered surveyor and has been used for the current control.
Data spacing and distribution	Data spacing for reporting of Exploration Results.	Drill hole spacing is variable between 25m and 200m
	Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.	The spacing of drill holes is variable and satisfactory for reconnaissance level drilling. The holes are not intended to be used for resource estimates at this stage of exploration.
	Whether sample compositing has been applied.	Sample composites was not employed.

Criteria	JORC Code explanation	Commentary
Orientation of data in relation to geological structure	Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.	Drill holes were drilled across the interpreted strike of the mineralization
	If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.	Tesoro diamond drilling at various orientations does not reveal any bias regarding the orientation of the mineralised horizons.
Sample security	The measures taken to ensure sample security.	Chain of Custody of digital data is managed by the Company. Physical material was stored on site and, when necessary, delivered to the assay laboratory. Thereafter laboratory samples were controlled by the nominated laboratory which to date has been Bureau Veritas and ALS Santiago. All sample collection was controlled by digital sample control file(s) and hardcopy ticket books.
Audits or reviews	The results of any audits or reviews of sampling techniques and data.	No audits have been undertaken.

(Criteria in this section apply to all succeeding sections)

Section 2: Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section)

Criteria	JORC Code explanation	Commentary
Mineral tenement and land tenure status	Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.	Information regarding tenure is included in the company's September 2020 quarterly activities report released to the ASX on 20 October 2020
	The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.	The Concession is believed to be in good standing with the governing authority and there is no known impediment to operating in the area.
Exploration done by other parties	Acknowledgment and appraisal of exploration by other parties.	Little historical exploration has been undertaken in either project area. Coeur d'Alene's Chilean exploration division undertook activities on the Ternera prospect, under an option agreement with the previous owners between April 1990 and January 1993.
Geology	Deposit type, geological setting and style of mineralisation.	The mineralisation model is to likely to be intrusive related gold deposit. The key characteristics that are consistent with this style deposit include:
		Low sulphide content, (typically <5%); reduced ore mineral assemblage that typically comprises pyrite and lacks primary magnetite or hematite
		Mineralisation occurs as sheeted vein deposits or stockwork assemblages and often combine gold with variably elevated Bi, W, As, Mo, Te, and/or Sb but low concentrations of base metals as seen in the initial four holes by Tesoro at El Zorro
		Restricted and commonly weak proximal hydrothermal alteration
		Intrusions of intermediate to felsic composition.
Drillhole information	A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drillholes:	Information relating to current drill program presented in this report.
	 easting and northing of the drillhole collar 	
	 elevation or RL (Reduced Level – elevation above sea level in metres) of the drillhole collar 	
	o dip and azimuth of the hole	
	 downhole length and interception depth 	
	o hole length.	
	If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.	

Criteria	JORC Code explanation	Commentary
Data aggregation methods	In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (e.g. cutting of high grades) and cut-off grades are usually Material and should be stated.	No cutting of grades has been undertaken at this early stage of exploration drilling. Downhole intercepts are calculated using a length weighted averaging method.
	Where aggregate intercepts incorporate short lengths of high grade results and longer lengths of low grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.	All individual results for holes ZDDH00001 to ZDDH00016 are reported in prospectus dated 30th October 2019 lodged by Plukka Ltd. Down hole length weighted average results are calculated using a 0.20g/t Au cut off and a maximum of 5m internal dilution
	The assumptions used for any reporting of metal equivalent values should be clearly stated.	No metal equivalents are reported.
Relationship between	These relationships are particularly important in the reporting of Exploration Results.	
mineralisation widths and intercept lengths	If the geometry of the mineralisation with respect to the drillhole angle is known, its nature should be reported.	The mineralisation forms sub-vertical sheeted veins and individual veins and may form plunging zones within the mineralised structures. Drilling by Tesoro has been undertaken to test these orientations.
	If it is not known and only the downhole lengths are reported, there should be a clear statement to this effect (e.g. 'downhole length, true width not known').	Exploration results are reported as downhole widths as the true width is not known with any certainty.
Diagrams	Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported These should include, but not be limited to a plan view of drillhole collar locations and appropriate sectional views.	Relevant maps and diagrams are included in the body of the report.
Balanced reporting	Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced to avoid misleading reporting of Exploration Results.	All assay results from drilling are reported. Reporting of visible gold occurrences in drill core is by visual inspection only and final gold content is not known until assay results have been received.
Other substantive exploration data	Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.	All material exploration data is reported in the body of the report.
Further work	The nature and scale of planned further work (e.g. tests for lateral extensions or depth extensions or large-scale step-out drilling).	Further work will be focused on drill testing the Ternera mineralisation and additional prospects as defined in the work program. Core will be used for metallurgical testwork and resource modelling is planned.
	Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.	Diagrams have been included in the body of this report.
