

27 January 2021

QUARTERLY REPORT

Period Ended 31 December 2020

Aldoro Resources Ltd (**Aldoro** or the **Company**) (ASX:ARN) provides the following commentary and Appendix 5B for the Quarter ended 31 December 2020

HIGHLIGHTS

- **Penny South and Unaly Hill South drill results**
- **Completion of initial soil sampling program in the Kibaye Greenstone Belt**
- **Completion of VTEM heli-survey over the Narndee Igneous Complex**
- **Identification of 16 high-priority EM targets from initial data processing**
- **Final stages of VTEM data processing and imagery refinement almost complete**
- **Follow-up FLTEM ground survey announced**
- **Executive Team Restructured and Technical Management bolstered**

During the last quarter, Aldoro completed two aircore (AC) drilling programs at Penny South and Unaly Hill South. The drill hole material was submitted for assay, with the following results:

At Penny South the AC program results show a broad zone of anomalous gold, including 16m at 0.1g/t Au from 46m in hole APSRC144, within target T7 in the north-eastern part of the tenement. This result correlates with historic results over 350m strike in this area. Remaining results showed subtle geochemical anomalies across Target T7 and the Southern Target extension (**ASX announcement 7 October 2020**). The Company believes that the Southern Target has not adequately been tested by the April reverse circulation drilling program and is planning a further step-out and infill RC drilling program to highlight a mineralised structure hosted in a mafic schist unit, identified over a strike length of 400m (**ASX Announcement, 26 June 2020**).

At the Unaly Hill South Project, also in the Youanmi Gold Mining District, the AC drilling program completed 56 in-fill RC holes (200m x 50 m spacing), aiming to replicate historic gold intercepts, including 6m @ 0.18 g/t Au from 48m (YP733 EOH 54m); 8m @ 0.125 g/t Au from 32m, incl. 4m @ 0.184 g/t from 32m (YP713-EOH 40m), and 12m @ 0.27 g/t Au from 28m, incl. 0.593 g/t Au from 32m (YP712-EOH 41m) (**ASX announcement, 9 December 2020**). Whilst gold anomalism was detected in holes UHSAC018 (4m @ 0.0368 g/t Au from 46m), UHSAC026 (7m @ 0.0327 g/t Au from 38m) and UHSAC029 (9m @ 0.0487 g/t Au from 54m), the highest individual grades obtained were from holes UHSAC004 (1m @ 0.236 g/t Au from 62m) and UHSAC053 (1m @ 0.22 g/t Au from 34m). Whilst considered anomalous, these

Suite 2, 1 Altona Street, West Perth WA 6005

E: contact@aldororesources.com

W: aldororesources.com

grades were disappointing from the aspect that they failed to reflect the higher levels of gold anomalism identified from historic drilling. As a result, the Company will undertake a comprehensive review on the overall prospectivity of the Project and determine whether further drilling is warranted.

During the quarter, Aldoro completed the first phase of the Kiabye Well Project within the Kibaye Greenstone Belt. Samples were collected at 50m x 200m spacing over an 8km² area and were submitted for gold and multi-element pathfinder analysis. The donation of compelling rock chip and lag samples by local gold prospectors from the surrounding area, warrants an expansion of the current soil sampling program. A further 2km² of sampling is planned to test and verify recent areas of gold prospecting activity and reported gold nugget finds (**ASX announcement, 5 October 2020**).

In October 2020, the Company announced the commencement of a major exploration effort at its Narndee Igneous Complex Project (**Narndee**) (**ASX announcement 29 October 2020**). This work commenced with an airborne electromagnetic (EM) survey, utilising UTS Geophysics' VTEM™ Max system. The survey, conducted from 9th -21st November, covered a 155 km² area of the southern area of the greater Narndee Igneous Complex (NIC). Initial processing of 1035 line/km of data (@ 150 m line-spacing) revealed the location of 16 major targets, comprising 7 type-1 bedrock conductors associated with magnetic features, and 9 deeper anomalies, located in the core area of the NIC (**ASX announcement, 24 November 2020**). The Company noted that many of the anomalies detected corresponded well with areas of historic surface geochemical results, with the rest untested by historic work. Ongoing processing and refinement of the data and imagery by UTS Geophysics, was completed in December, with the compilation of detailed resistivity depth slices and plans (**ASX announcement 21 January 2021**) The refined data and imagery released to date support the presence of conductive zones at depths from 50-300m across the entire property. These zones have the appearance of sub-horizontal layers and lense-like bodies reminiscent of a layered, magnetic ultramafic intrusion. Due to the success of this program, the Company announced a **High-Power Fixed Loop (FLTEM)** ground EM survey scheduled to start mid-late January (**ASX Announcement 21 December 2020**). The FLTEM survey will be carried out by HPEM Geophysical Services, who will incorporate those targets that have been interpreted and selected as high priority by Southern Geoscience Consultants (SGC).

Overview of Projects

Aldoro's owns a suite of advanced exploration projects principally focused on gold, nickel and copper mineralisation (Figure 1). The Company holds four projects in the Murchison Region of Western Australia around the Youanmi Gold Mining District (Penny South and Unaly Hill South) and the Narndee-Windimurra Igneous Complex (Narndee Area and Windimurra).

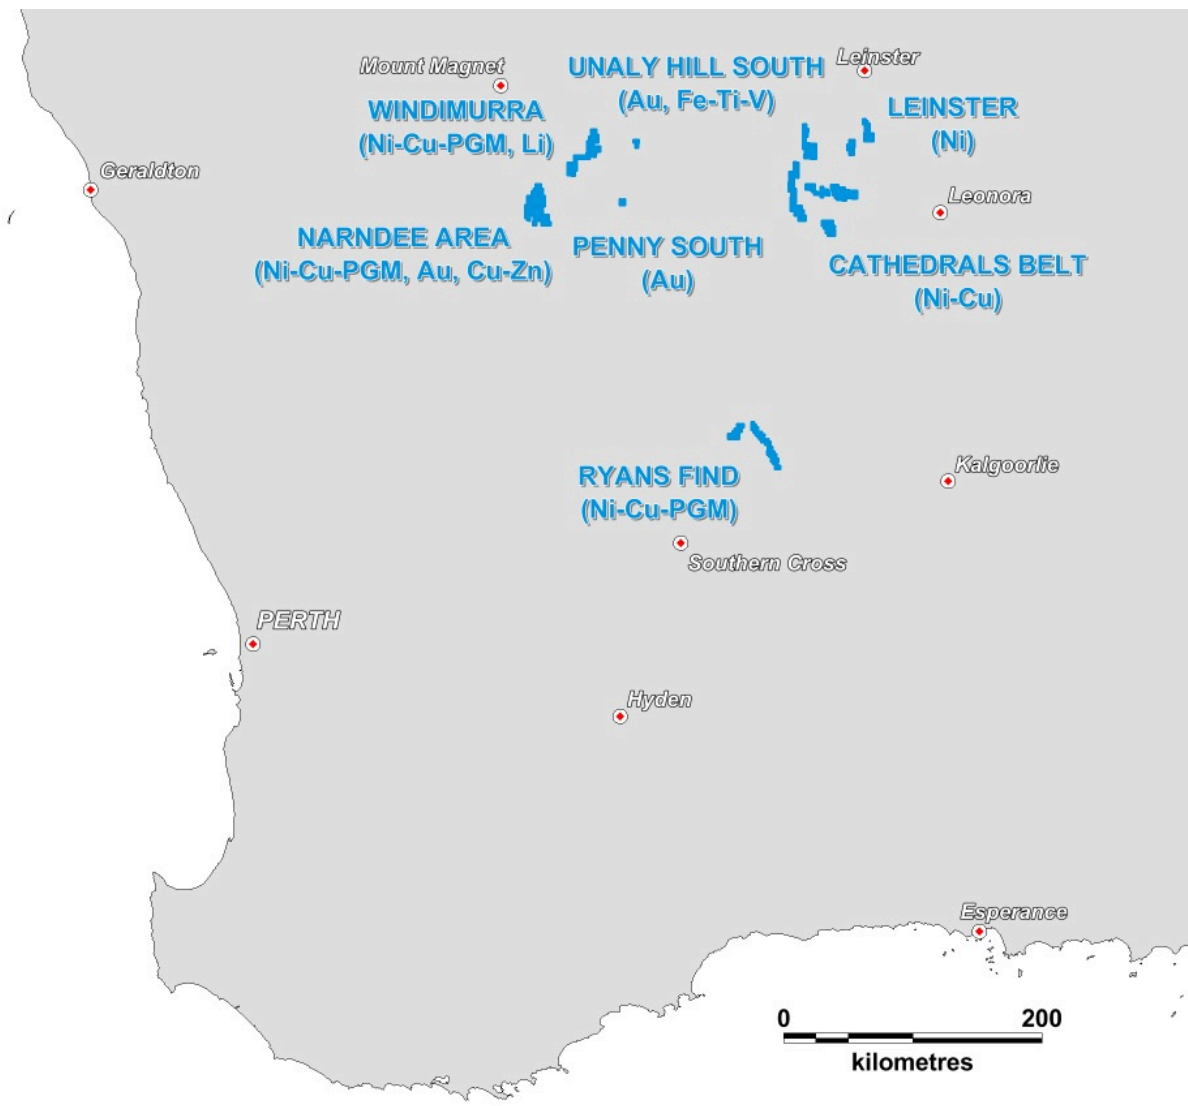

Figure 1: Aldoro Tenements grouped into Project Areas

Penny South Gold Project

The Penny South Gold Project is located in the Youanmi Gold District, approximately 30km south of the Youanmi Gold Mine (*ASX:RXL and VMC*) and directly south of the Penny Gold Project owned by Ramelius Resources (*ASX:RMS*).

The project area contains over 2.5km strike extension of the Penny West Shear, which hosts the historic high-grade Penny West Gold Mine. Like the Penny West area, tenement E57/1045 contains limited outcrop and is overlain by 1m to 30m of sand and sedimentary cover. Historic

drilling within tenement E57/1045 has encountered various anomalous intersections of gold mineralisation, the three best being 2m at 33.98g/t Au, 6m at 1.27g/t Au and 5m at 1.11g/t Au.

During the first half of 2020 Aldoro completed its first RC drilling program at the Penny South project (*ASX, Penny South RC Results, 28 May 2020; Encouraging Results from Penny South 1m Assays, 26 June 2020*). Highlights of this drilling program include:

APSRC026 3m at 2.5g/t Au from 193m, inc. 1m at 6.7g/t Au from 194m

APSRC005 3m at 2.8g/t Au from 221m, inc. 1m at 5.2g/t Au from 222m

APSRC006 1m at 3.4g/t Au from 161m

The results of the program have identified a mineralised structure at the Southern Target over a strike length of at least 400m, with assays results up to 6.7g/t Au (APSRC026).

During the last quarter Aldoro completed further AC drilling at Penny South, focused on three target areas: the southern extension of the Penny West Shear granodiorite-mafic contact, the potential northwest extension of the granodiorite unit and target T7, a magnetic low feature in the north-eastern part of the tenement close to historic gold anomalies.

Hole APSAC144, within target T7, showed a broad zone of anomalous gold of 16m at 0.1g/t Au from 46m, correlating with historic results over 350m strike in this area. Remaining results showed subtle geochemical anomalies across target T7 and the Southern Target extension.

A review of all exploration results to date was completed during the quarter with the aid of Aldoro's consultant structural geologist. This review concluded that the granodiorite footwall contact in the Southern Target area may not have been adequately tested by the April RC drilling program. Revisiting the Penny West model (*ASX:SPX, 29 August 2019*) suggests that the mineralised structure identified within a mafic schist unit may represent the low-grade hanging wall lode in the Penny West analogy and that the footwall granodiorite unit warrants further testing (*ASX, Penny South AC Results; Further RC at Southern and T7 Targets, 7 October 2020*). Aldoro is in the process of securing drill rigs to further test the Southern Target, with a combination of diamond drill tail to hole APSRC005 in the centre of the target and further step-out and infill RC drilling.

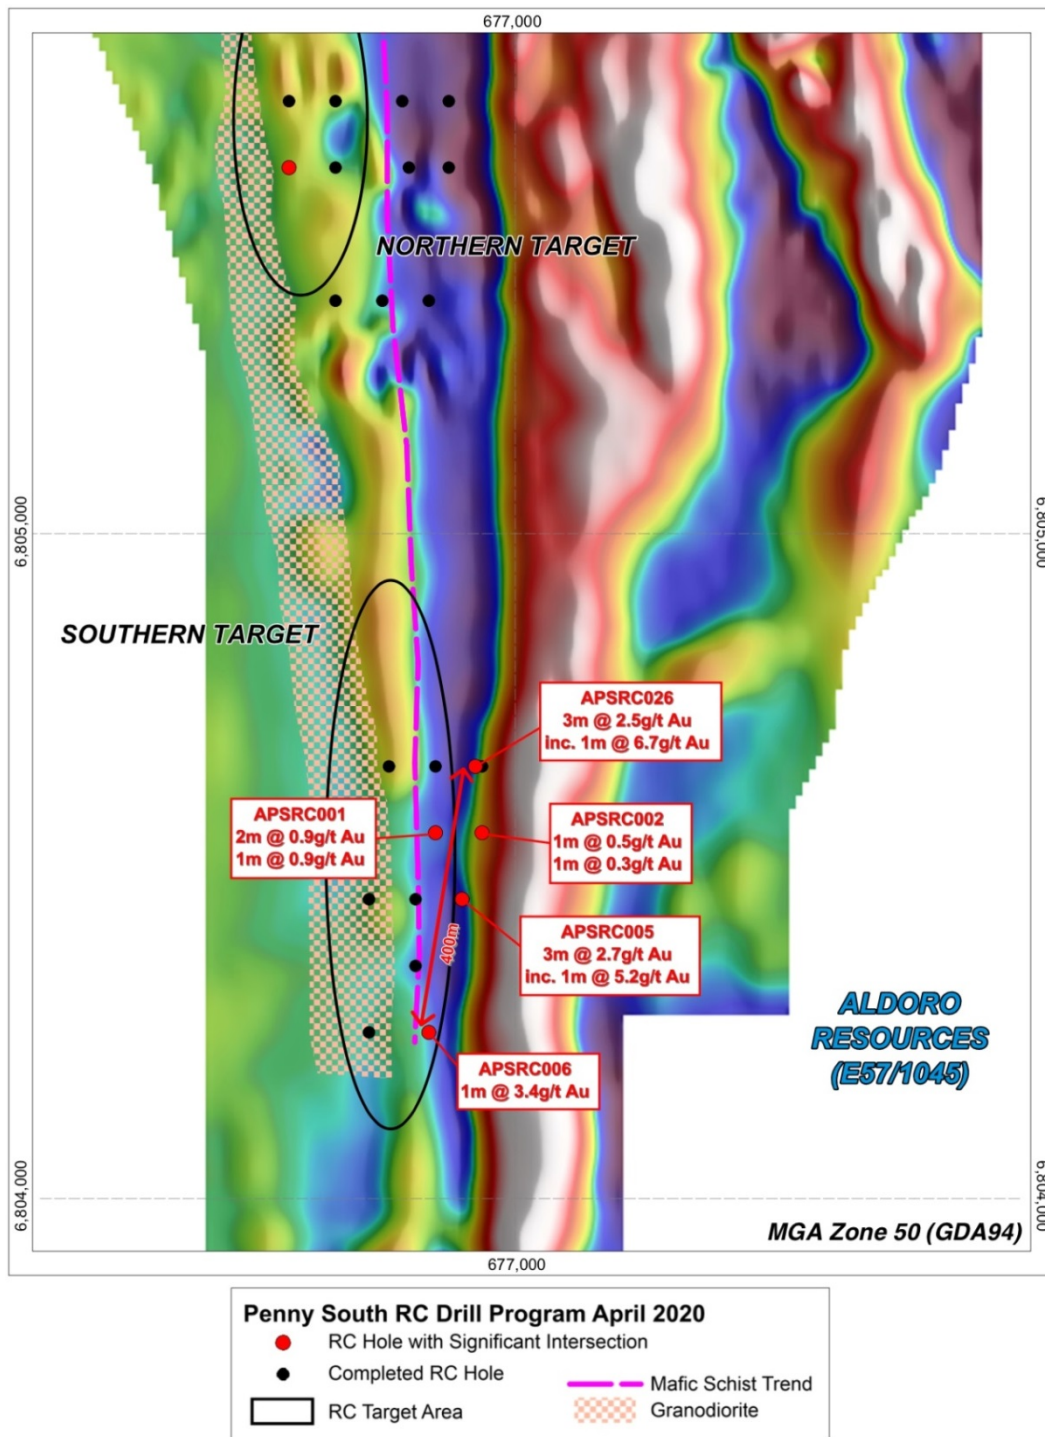

Figure 2: Penny South RC Drilling April 2020 1m Sample Assay Results

Unaly Hill South

The Unaly Hill South Project (tenement E57/1048) is located in the Youanmi Gold Mining District, approximately 16km northeast of Rox Resources (ASX:RXL) and Venus Metals (ASX:VMC) Youanmi Gold Project. The tenement area straddles an interesting structural juncture between the Youanmi Shear and the Yuinmery Shear. This intersection of two major

shears has long been “considered conceptually favourable for the development of dilation structures for possible gold mineralisation” but limited gold exploration has been conducted across the tenement since the late 1990’s.

Earlier this year, Aldoro completed a new geological interpretation of the tenement area based on a high-resolution ground magnetic survey and a review of historical drilling and logging, providing lithological information (ASX, Penny South and Unaly Hill South Aircore Drilling, 3 July 2020). This work identified potential dilation structures associated with a broad zone of gold-in-saprolite anomalism, indicated by historic shallow vertical RAB drilling, along the Youanmi Shear.

During the last quarter, Aldoro completed a 3,422m, 56-hole AC drilling program at the project. Holes were generally drilled to blade refusal, with an average depth of 61m and a maximum depth of 102m, due to an increased weathering profile in some areas. The anticipated target geology, based on Aldoro’s litho-structural interpretation, was generally encountered throughout the program with holes UHSAC001 to UHSAC029 testing the western mafic-ultramafic schist unit, with quartz veining and haematite, sericite and carbonate alteration observed; holes UHSAC030 and UHSAC049 testing the eastern mafic schist-metabasalt unit with BIF horizons, again quartz veining, disseminated pyrite (trace to 5%) and alteration was observed; and holes UHSAC050 to UHSAC055 testing historic gold intersections at the contact with the metagabbro of the Atley Igneous Complex. The drill hole intercepts were submitted for assay (ASX Announcement 13 October 2020) during this period.

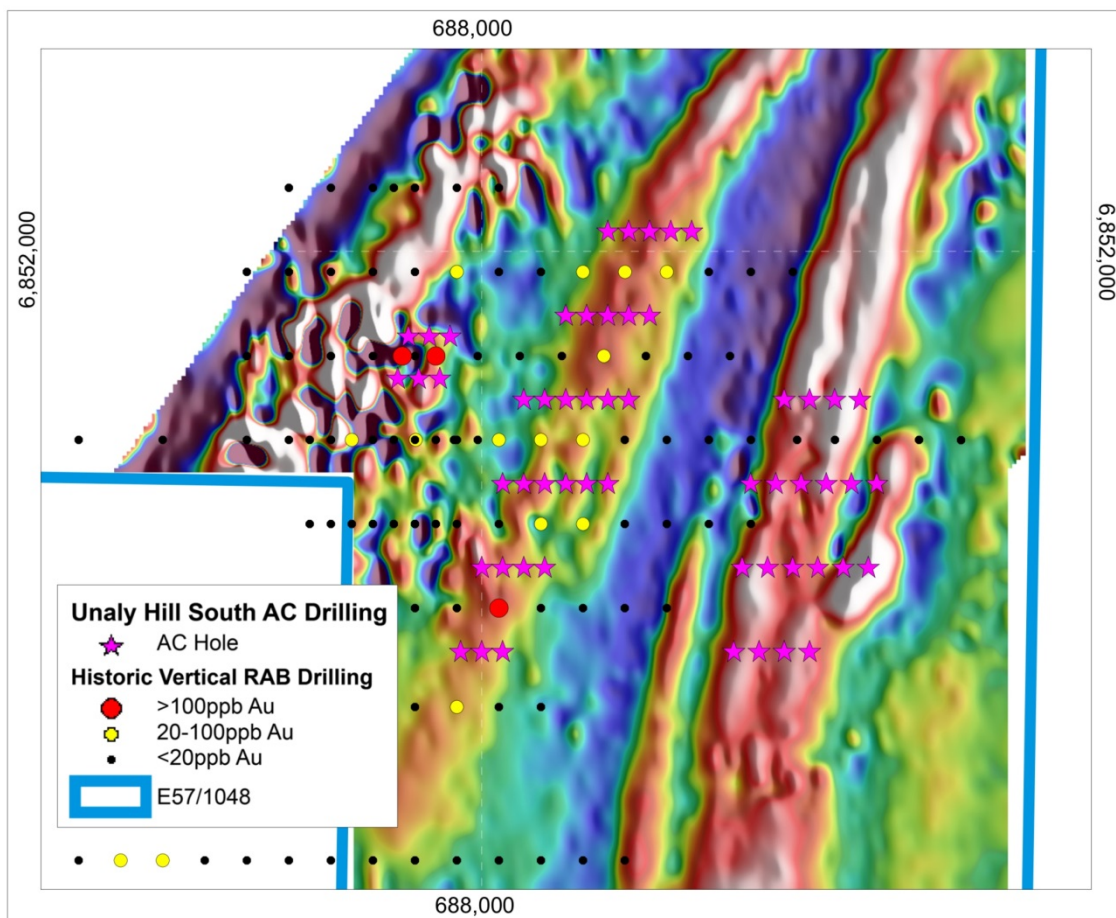

Figure 3: Unaly Hill South AC Drilling October 2020

The assay results (**ASX Announcement 9 December 2020**) detected gold anomalism in holes UHSAC018 (4m @ 0.0368 g/t Au from 46m), UHSAC026 (7m @ 0.0327 g/t Au from 38m) and UHSAC029 (9m @ 0.0487 g/t Au from 54m). Highest individual grades intersected were from holes UHSAC004 (1m @ 0.236 g/t Au from 62m) and UHSAC053 (1m @ 0.22 g/t Au from 34m). Whilst considered anomalous, these grades were disappointing from the aspect that they failed to reflect the higher levels of gold anomalism identified from historic drilling. As a result, the Company has decided to undertake a comprehensive review on the overall prospectivity of the Project and determine whether further drilling is warranted.

Narndee Project Area

The Narndee Project Area contains 2 exploration projects (differentiated by different styles of geology) surrounding the Narndee Igneous Complex – the Narndee Igneous Complex (Ni-Cu-PGE) and the Kiabye Greenstone Belt (Au).

Narndee Igneous Complex (Ni-Cu-PGE)

The Narndee-Windimurra Complex is the largest layered mafic-ultramafic complex in Australia. Aldoro holds 306km² of tenements over the basal ultramafic portion of the Narndee Igneous Complex. This type of geology is similar to Chalice Gold Mines Ltd's (ASX:CHN) recent Ni-Cu-PGE discovery at the Julimar layered mafic-ultramafic complex (ASX:CHN, 15 April 2020). Historic exploration at Narndee has generally focused on PGE mineralisation using a Bushveld model, whilst historic drill results have found good indications of Ni-Cu sulphide mineralisation. Maximus Resources (ASX:MXR) flew an airborne EM survey over the complex in 2008 (ASX:MXR, 20 August 2008), identifying multiple EM targets, but only conducted limited follow up work. Aldoro intends to build on this wealth of historical information and is excited by the nickel potential of the project.

Activity on the project continues to step up post the Company's recent capital raise. UTS Geophysics completed a high-resolution VTEM™ Max, heli-borne EM survey, facilitating the discovery of 16 high-interest targets (Figure 4).

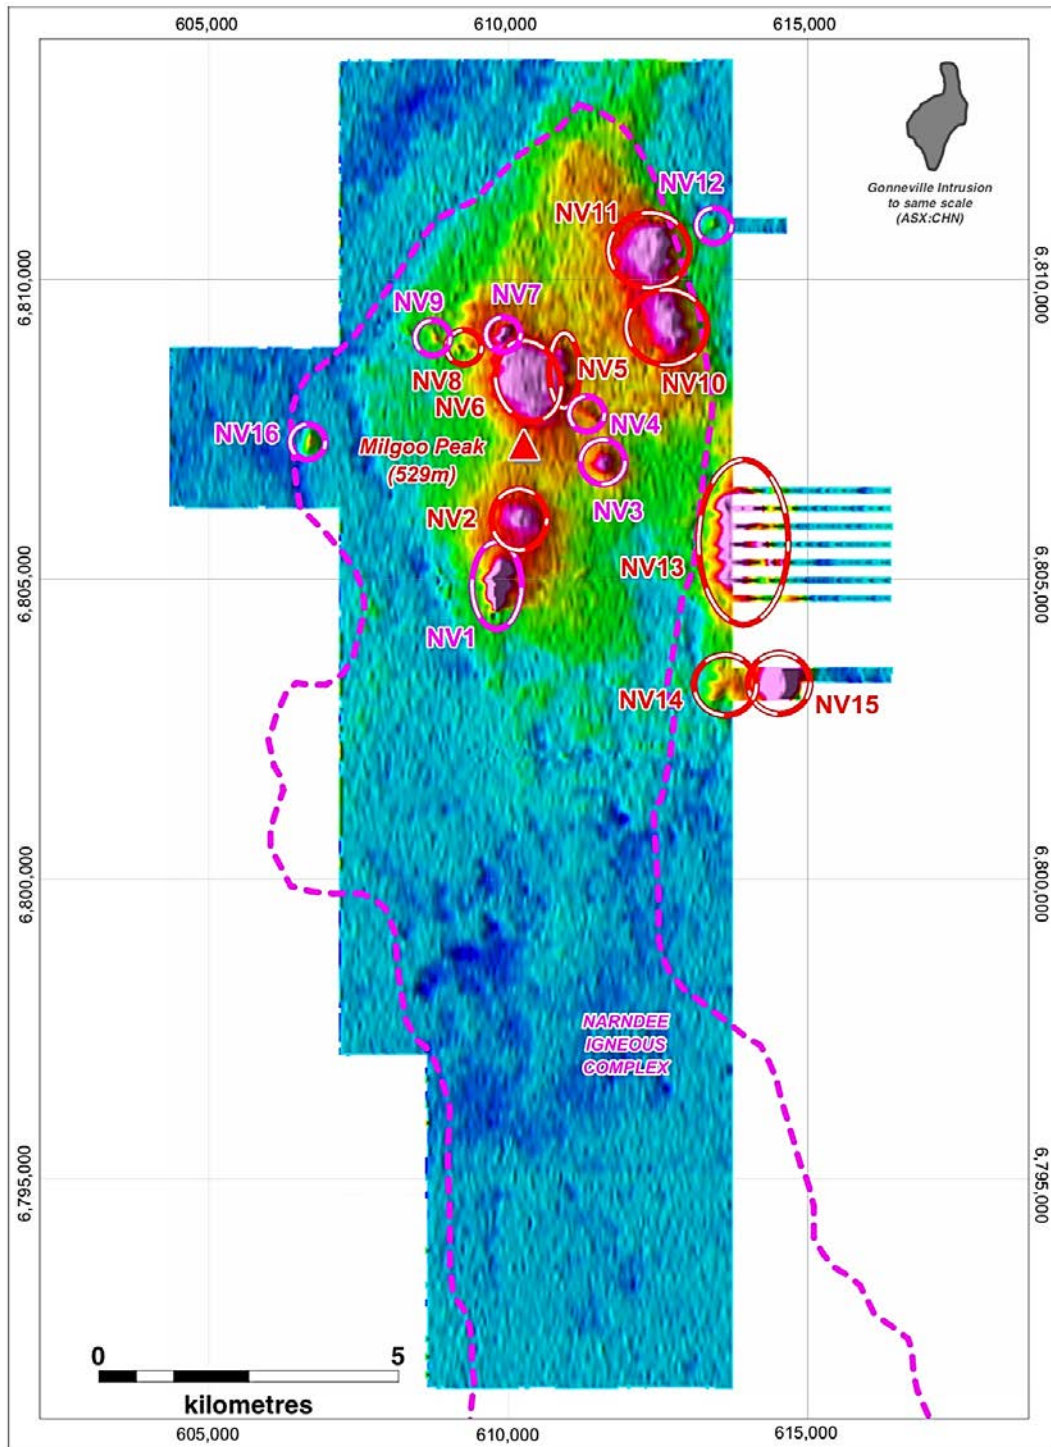

Figure 4. VTEM™ Max targets identified from initial data processing (purple = bedrock conductors; red = deep anomalies).

The refining of imagery and further processing of data in this quarter into high-resolution resistivity depth slices and depth plans (Figure 5), enabled these provisional low-resolution targets to be remodelled into high-resolution targets of sufficient quality and detail to enable their selection for a follow-up FLTEM ground EM survey in Q1 2021 (ASX Announcement 21 December 2020) (Figure 6). Aldoro considers this to be the best technology available for this type of survey and reflects our best-practice approach to the project.

3d views of apparent resistivity depth slices:

Apparent Resistivity Depth Slices plans:

Figure 5. Apparent high-resolution resistivity depth plans (top) and depth slices (bottom) (UTS Geophysics Pty Ltd.)

Figure 6. The Narndee Project. At right, the recently refined imagery had enabled high priority targets (yellow and red circles) to be identified for the follow-up FLTEM survey scheduled in January. At left, showing detail of inset high priority targets and proposed FLTEM ground survey lines (blue).

Kiabye Greenstone Belt (Au)

The Kiabye Greenstone Belt wraps around the western side of the Narndee Complex, predominantly formed of Norie Group amphibolite-metabasalt and Yaloginda metasedimentary units, with a sheared contact against the surrounding Tuckanarra Suite granite. The greenstone belt extends for over 30km of strike and is historically underexplored.

Recent prospecting activities on the project area have identified a number of new gold occurrences of both gold nugget patches and gold in quartz veins. During the quarter Aldoro conducted two field visits to ground-truth these locations and assess regolith conditions for soil sampling.

An initial soil sampling program covering an area of approximately 8km² around Kiabye Well North was completed, with samples collected at 50m x 200m spacing. These samples were submitted last quarter to the laboratory for gold and multi-element pathfinder analysis and encouraging assay results have been received. As a result, the soil sampling program has been expanded by 2 km² to cover further areas highlighted by prospecting activities and the Company's field visits.

Ryans Find Project

Aldoro has been working up the gold potential of the Ryans Find tenement areas that contain over 50km strike length of the Marda-Diemals and Watt Hills Greenstone Belts. During the quarter, the Company completed an initial site visit to the project area and also applied for additional tenement area with application ELA16/551.

The Company notes the recent transactions and increased interest around Mt Dimer, with Twenty-Seven Co's (ASX:TSC) purchase of the historic Taipan Mine for up to \$1.65m cash and \$1.5m cash/stock; and Aurumin's successful \$7m capital raising for their upcoming IPO.

Aldoro is actively pursuing the grant of tenements ELA77/2520, ELA77/2535 and ELA16/551 with a gold focused exploration program prepared and ready to commence as soon as that occurs. It is anticipated this project will be a major focus for the Company during 2021.

Cathedrals Belt Project

The Cathedrals Belt Project comprises 7 tenements located 250km northwest of Kalgoorlie, adjacent to nickel sulphide discoveries made by St George Mining Ltd (ASX:SGQ) at the Cathedrals, Strickland and Investigators Prospects.

The Company's tenements lie to the east, and west, of St George's tenure and the Company's interpretation based on its own high resolution aeromagnetic survey is that the greenstones hosting the nickel-sulphide mineralisation extend into Aldoro's tenure (Figure 7). Aldoro's tenement E29/1030 is interpreted to lie directly along trend from the ultramafic units hosting the nickel-sulphide mineralisation at the Cathedrals, and aeromagnetic images show a discrete E – W magnetic feature in the SW portion of E29/1030.

Figure 7: Structural interpretation of Cathedrals Belt over regional aeromagnetic image

Aldoro notes the continuing exploration success announced by St George (ASX:SGQ) at their neighbouring Mount Alexander Project. The Company is closely following these developments whilst planning our next stage of exploration work at the project.

Leinster Project

The Leinster Project consists of 100% owned tenements E36/929 and E36/930. No field work was undertaken during the quarter.

Windimurra Igneous Complex

No work was undertaken during the quarter whilst the Company waits on the grant of the tenement.

Corporate

The Company's Annual General Meeting (**AGM**) was held on Wednesday, 25th November 2020. All resolutions put to the AGM were carried by way of a poll. Following the AGM, Mr Rhod Grivas tendered his resignation as Chairman of the Company and Mr Joshua Letcher resumed the role of Chairman. Mr Lincoln Ho was appointed as Non-executive Director of the Company as approved by shareholders at the AGM.

Lincoln has over a decade of experience in equities trading, with a strong focus in due diligence, mergers & acquisitions and corporate restructuring in the emerging companies sector. Further, he holds specific investor relations experience in both Australia and Asia,

having liaised with significant high net-worth investors based in Hong Kong, Singapore and China.

Lincoln currently serves as non-executive director of Red Mountain Mining Limited (ASX: RMX). He previously served as non-executive director of Pure Minerals Limited (ASX: PM1), an emerging company targeting production of nickel sulphate for the battery minerals sector, and Sultan Resources Limited (ASX: SLZ), another listed company with focus on Australian gold and nickel assets.

Lincoln also currently serves as director of the Pioneer Development Fund (Aust) Limited, the largest shareholder in the Company.

On 27th November 2020, Mr Troy Flannery was appointed as Non-Executive Director of the Company.

Troy has more than 23 years of experience in the mining industry, including 7 years in corporate and 16 years in senior mining engineering and project development roles. He has a degree in Mining Engineering, a Master's in finance, and First Class Mine Managers Certificate of Competency.

Troy is also the CEO of Abra Mining Pty Ltd, which is the corporate vehicle for the Galena Mining Ltd (ASX:G1A) & Toho Zinc Joint Venture. He has worked at numerous mining companies, mining consultancies & contractors including BHP, Newcrest, Xstrata, St Barbara Mines & AMC Consultants.

Subsequent to the end of the quarter, Dr Caedmon Marriott tendered his resignation to pursue other interests. The Company sincerely thanks Dr Marriott for his efforts over 2020 and wishes him success in his other endeavours.

For and on behalf of the board:

Sarah Smith
Company Secretary

This announcement has been authorised for release to ASX by the Board of Aldoro Resources

Competent Persons Statement

The information in this announcement that relates to Exploration Results and other technical information complies with the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (JORC Code) and has been compiled and assessed under the supervision of Luke Marshall, a geological consultant to Aldoro Resources Ltd. Mr Marshall is a Member of the Australasian Institute of Geoscientists and has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the JORC Code. Mr Marshall consents to the inclusion in this announcement of the matters based on his information in the form and context in which it appears.

ASX Listing Rule 5.3.1

Exploration and Evaluation during the quarter was \$103k. The majority of this was spent on the drilling program at the Company's Penny South Project, Narndee Projects, Unaly Hill South Projects shire rates and tenement costs.

ASX Listing Rule 5.3.2

There were no substantive mining production and development activities during the quarter.

ASX Listing Rule 5.3.5

The following table sets out the information as required by ASX Listing Rule 5.3.5 regarding payments to related parties of the entity and their associates:

Related Party	Amount	Description
Directors	\$51,473	Director Fees
Associate of Director	\$4,680	Occupancy expenses
Director	\$45,725	Exploration consulting fees paid to a Director/Director related entities

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:	
8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?	
Answer: N/A	
8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?	
Answer: N/A	

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

8.8.3 Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?

Answer: N/A

Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

- 1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.
- 2 This statement gives a true and fair view of the matters disclosed.

Date: 27 January 2021

Authorised by: The Board of Aldoro Resources Limited
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [name of board committee – eg Audit and Risk Committee]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
