

Quarterly Activities and Cashflow Report for Period Ended 31 December 2020

European base metals explorer Zinc of Ireland NL (ASX: ZMI) (“**ZMI**” or “**Company**”) presents its Quarterly Activities and Cashflow report. As previously communicated, given the impacts of COVID-19 in Europe, the Company opted to take a watch and wait approach with respect to ongoing Government public health measures during the quarter, as Ireland continues to review and update its COVID-19 response. Zinc of Ireland considers that this was appropriate and in the interests of personnel and public safety and so that field work programmes can be implemented efficiently and to completion as soon as suitable conditions allow.

Highlights:

Consolidation of the Rathdowney Trend (as announced to the ASX on 9 September 2020)

- ZMI via (Raptor Resources) was been granted 34 Production Licences (**PL’s**) at the end of the quarter, including the Rapla, Cashel and Derrykearn blocks with six, twenty-three and five licences respectively.
- ZMI continues to consolidate 130km (approximately 2,500km²) of the mineralised Rathdowney Trend.
- The Rathdowney Trend hosts the previously mined Lisheen (22.8Mt at 14.1% Zn+Pb) and Galmoy (9.7Mt at 16.2% Zn+Pb) deposits as well as the company’s Kildare deposit (11.3Mt @ 9.0% Zn + Pb) and a number of other prospects.
- The Company is now in control of what is arguably one of the most prospective exploration land packages for high grade, large tonnage, Zn/Pb deposits in the world.
- ZMI are the first company to have consolidated a commanding position on the Trend with previous exploration having been restricted to fragmented tenure. This will offer ZMI advantages in terms of the application of the latest geological and deposit modelling techniques to the comprehensive Rathdowney Trend data package.

Mineral Resource Estimate - Update Kildare Zinc Project (100% owned) and associated High Level Mining Study.

- An updated Inferred Mineral Resource Estimate for the Kildare Project was announced to the ASX on 8 September 2020 with resources now standing at: 11.3 Mt @ 9.0% Zn+Pb (7.8% Zn and 1.2% Pb) at a 5.0% Zn equivalent cut off.

Zinc of Ireland is pleased to announce that it has continued to consolidate its position on the Rathdowney Trend through application and government auction as well as acquisition from third parties. The Company now controls 130km of the Rathdowney Trend covering 2,493km² as shown on Figure 1. ZMI are now in control of what is arguably one of the most prospective belts of ground for high grade, large tonnage, “Irish Type” Zn/Pb deposits in the world. The acquisition of this tenement portfolio along with the wealth of freely available historic data will allow the Company to utilise the latest geological and deposit modelling techniques by applying a belt scale approach to exploration that has not been possible previously.

Specific data consolidation activities have included:

- The historic exploration data held in the open file archives of the Geological Survey of Ireland and the Exploration and Mining Division has been accessed, downloaded and assessed;
- The ZMI digital database for the Block now contains: 307,289 soil samples, 26,927 roadside soil samples, 20,149 deep overburden samples and collar data for 1,754 exploration drill holes;
- 10 separate airborne geophysical surveys (Magnetics, EM and Radiometrics) have been flown over parts of the block from the early 80's until 2019, ZMI has acquired the data for all surveys;
- Targeting is ongoing via the application of the historic data to identify areas with prospective geology, structural architecture, alteration and mineralisation (see Figure 2); and
- Historic diamond drilling data is being reviewed using modern GIS systems and the latest mineralogical models for Irish Type Zn/Pb Deposits.

Quality target areas are being identified and comprehensive follow up work programmes will be designed.

An updated Inferred Mineral Resource Estimate for the Kildare Project was reported to the ASX on 8 September 2020 with resources now standing at: 11.3 Mt @ 9.0% Zn+Pb (7.8% Zn and 1.2% Pb) at a 5.0% Zn equivalent cut off. Assaying and interpretation of drilling undertaken into the Fault Compartment 3 (FC3) area at Kildare was completed early in 2020. This work was included into the Company's updated Inferred Mineral Resource Estimate (MRE) for the Kildare project, details of which are given in Table 1. below.
