#### **OUTLOOK**

The principal activity of the Company is gold exploration and mine development in Ghana. The Company holds tenements prospective for gold mineralisation in Ghana in two granite-greenstone belts: the Bolgatanga Project and the Namdini Gold Project ("Namdini"), which are, respectively, located within the Greenstone Belts in northeast Ghana and the Subranum Project, which is located within the Sefwi Greenstone Belt in southwest Ghana.

The main focus of activity is the Namdini Gold Project which has a gold Ore Reserve of **5.1Moz** (138.6Mt @ 1.13g/t Au; 0.5g/t Au cut-off) inclusive of 0.4Moz Proved (7.4Mt @ 1.31g/t Au; 0.5 g/t Au cut-off) and 4.7Moz Probable (131.2Mt @ 1.12 g/t Au; 0.5g/t Au cut-off).

In response to the COVID-19 pandemic and following advice from the World Health Organization ("WHO") as well as the Australian, Ghanaian, and Canadian Governments, Cardinal has enacted changes to its exploration programme and on-site development programme, primarily focused on the safety and well-being of our workforce.

Most international travel to Ghana remains suspended. On the ground in Ghana, the workforce has been reduced to key personnel only. According to the latest WHO External Situation Report (January 22, 2021), there had been 58,822 confirmed cases of COVID-19 in Ghana, including cases via local transmission. 358 deaths from COVID-19 have been recorded in Ghana at the time of this report. ### Front End Engineering Design “FEED”

All project works for the FEED program continue to be suspended due to the global spread of COVID-19 and the takeover bid process.

A significant interest in the project remains from vendors and contractors. The major suppliers for long lead items have informally indicated their manufacturing schedules have not changed since March 2020 when the COVID-19 was declared a pandemic.

A summary of the FEED activities up to the point of suspension were as follows:

## **REGIONAL EXPLORATION UPDATE**

The Company owns exploration rights to two exploration projects: The Bolgatanga Project which includes Bongo Licence Area, Kungongo Licence and Ndongo Licence Area (Figures 1 and 6) located in the northeast of Ghana and the Subranum Project located in the southwest of Ghana.

Exploration activities have included varying levels of airborne magnetic and radiometric surveying, regional and prospect-scale ground magnetic, gravity, chargeability, resistivity and radiometric geophysical surveys, regional and detailed geological mapping, rock chip and auger soil sampling and reverse circulation and diamond drilling programmes.

The Company's regional exploration programme during the Quarter was limited to field mapping and ground-truthing following a review of structures and targets generated from geophysical data, historical RC results and a follow up on identified geophysical targets with trenching and sampling programme at Yameriga (RL9/19) within the Ndongo Licence Area (Figure 5).

## **BOLGATANGA PROJECT**

### **Ndongo Licence Area**

The Ndongo Licence Area, hosts part of the extensive regional Bole-Bolgatanga Fault in the northwest and the prospective Nangodi Shear Zone in the centre of the licence area. The licence area wraps around the southern end of the Palungu granitoid intrusive, in the south-eastern region of the licence and forms the main area of perspectivity on the tenement (Figure 5).

The Ndongo Licence Area, comprises of the combined, Nangodi Prospecting Licence (PL9/13, covering a land size of 84.7km<sup>2</sup>), Ndongo Prospecting Licence (PL9/22, covering a land area of 157km<sup>2</sup>), and Yameriga Prospecting Licence (RL9/19, covering a land size of 36.78km<sup>2</sup>), granted to Cardinal to prospect for gold in the Bolgatanga and Talensi Nabdam District in the Upper East Region in the Republic of Ghana. The combined land area of the Ndongo Licence Area is 278.48km<sup>2</sup>.

As part of the precautionary measures put in place by the Company to minimise the risk of exposure of employees amid the COVID-19 pandemic, the Company suspended all exploration activity at the Ndongo Licence Area during the Quarter.

### **Kungongo Licence Area**

The Kungongo Prospecting Licence (RL9/28) is located approximately 40km west of Namdini Gold Project and covers a total land size of 122.4km<sup>2</sup>. The licence hosts the extensive regional Bole-Bolgatanga fault over a length of 6km in the northwest corner of the tenement. The tenement is underlain by Birimian greenstones which have been extensively intruded by younger granitoids (Figure 5).

As part of the Company's precautionary measures put in place to minimize the risk of exposure of employees amid the COVID-19 pandemic, all exploration activity at Kungongo was placed on hold during the Quarter.

### **Bongo Licence Area**

The Bongo Licence Area covers a total land area of 465km<sup>2</sup>. It hosts part of the regional Bole-Bolgatanga Fault (Figure 5).

The Bongo Licence Area comprises of the combined, Bongo Prospecting Licence (RL9/29 covering a land size of 155km<sup>2</sup>) located in the Bongo area, Kandiga-Atibisi Prospecting Licence (PL9/38 covering a land size of 155km<sup>2</sup>) located in the Kandiga-Atibabisi area, and Zoko-Tarongo Prospecting Licence (PL9/37 covering a land size of 155km<sup>2</sup>) located in the Zoko-Tarongo area all in the Upper East region of Ghana.

The Company completed a trenching program over some high-order gold-in-soil anomalies at the Bongo Licence Area during the Quarter (Table 3 and Figure 6). The trenching program's purpose was to follow up on the soil anomalies to generate mineralisation targets for drilling.

A total of three trenches over 217m total length across the selected gold-in-soil anomalies were completed. Samples from these trenches have yet to be submitted to the analytical laboratory. Final assay results from the trenching program are expected during Q1\_2021.

Programme	No. Trenches	Total (m)	No. Samples	No. Duplicates	No. Blanks	No. Standards	Total Samples

## SUBRANUM PROJECT

The Subranum Project covers an area of 71.4km<sup>2</sup> located in southwest Ghana. The license straddles the eastern margin of the Sefwi Gold Belt which is bounded by the regional Bibiani Shear Zone (**BSZ**) stretching about 200km across southwestern Ghana (Figures 1 and 7).

There is 9km of the BSZ developed within the Subranum license trending NE to SW. The BSZ forms a very prospective, sheared contact between Birimian phyllites and greywackes to the southeast and mafic to intermediate volcanics and volcanoclastics to the northwest. Granitoid stocks of the Dixcove suite intrude this shear zone.

The portion of the Bibiani Shear Zone occurring within the Subranum tenement is 9km long, trending SW to NE. Previous extensive exploration has outlined a 5km long gold target, extending from the SW tenement boundary towards the NE, with the remaining 4km of the 9km strike length remaining relatively unexplored.

All exploration activities were on hold during this Quarter as part of the Company's precautionary measures to minimize the risk of exposure of employees to COVID-19.
