NINE GOLD TARGETS DEFINED OVER 14KM AT HN5, HN6, HN9 AND LADY JULIE

HIGHLIGHTS

- Multiple new gold targets have been defined in 9 areas totaling 14km within HN5, HN6, HN9 and Lady Julie.
- 3.4km of targets located at Lady Julie North (1, 2 and 3) shear with a recent intersection of 18m at 2.1g/t Au from 32m.
- 1.5km of targets at Lady Julie Central with recent intersection of 4m at 16.66g/t Au from 32m.
- The thickened central zone within HN9 is still open to the NE and more holes are planned heading towards the NE where a seismic target is 1km away.
- Two areas of significant mineralisation located along previously untested thrust zones pointing towards further drilling along the major thrusts.
- Major mineralised targets HN9 and Lady Julie North appear to straddle two thrusts.

The recent 2D seismic survey combined with results from recent major drill programmes as well as historical drillings results have led to the interpretation of 14km of gold targets in 9 areas within HN5, HN6, HN9 and Lady Julie outlined in brown in Figure 1 and summarised in Table 1.

The best-looking target so far besides the 3km-long HN9 mineralisation, are Lady Julie North (3.4km long) and Lady Julie Central (1.5m long). At Lady Julie North there are many mineralised intersections including **18m at 2.1g/t Au from 32m (eoh)** in MLJRC162 and **13m at 1.37g/t Au from 3m** in AJC01. Also, there are numerous untested NS workings which are planned to be drilled called Lady Julie North 2 (Figure 1).

At Lady Julie Central there are several high-grade intersections including **4m at 16.66g/t Au from 32m** in MLJRC214, **8m at 9.23g/t Au** from 24m in RFB226 and **4m at 8.36g/t Au from 18m** in RFB206 (Figure 1). The Lady Julie Central gold target is now interpreted to trend to the NNE rather than NS. This enlarges the target potential size to 1.5km and further drilling is warranted further to the NNE to see whether it may eventually link into the Lady Julie North target. These two gold target zones have been defined by both recent drilling results and reinterpretation of existing drilling.

Areas that were not previously tested have come up with new significant intersections at HN9 Thrust 3 and HN6 Thrust 2, with further drilling planned test these areas. The thrust zones continue to the north and south over an extensive 6km length.

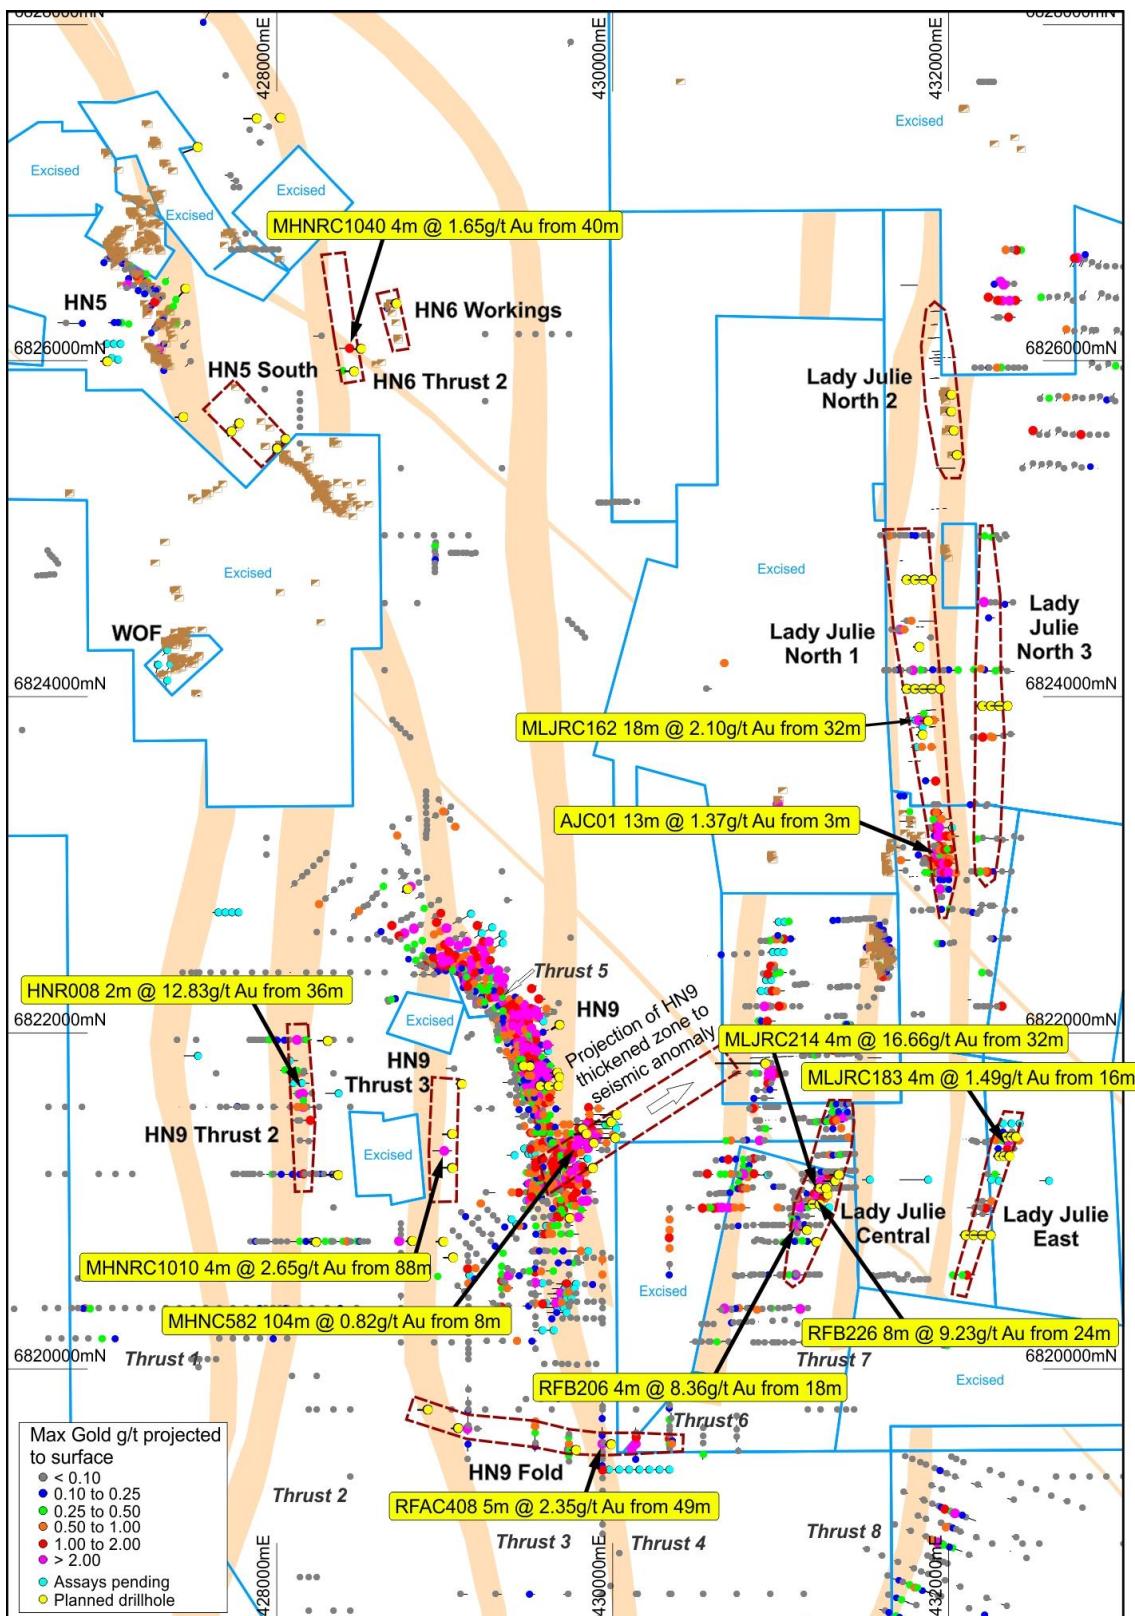

Figure 1 Gold intersection overview covering the HN5, HN6, HN9 and adjacent Lady Julie Projects showing nine gold targets covering 14.2km with highlighted intersections (yellow label). Significant historical gold and Magnetic intercepts (max Au projected to surface) and new planned 79 RC holes for 7,844m in yellow and 117 RC and 4 Diamond holes for 11,192m with assays pending in blue.

magnetic resources^{NL}

Other previously drilled areas include HN9 Thrust 2, which is positioned on Thrust 2. At Lady Julie North 1 and 2, the targets are compelling because they are associated with the two parallel Thrusts 7 and 8 (Fig. 1). Interestingly, both the mineralised targets at HN9 and Lady Julie North appear to straddle two thrusts, with HN9 being a major 3km-long mineralised zone.

Within the HN5, HN6, HN9 and Lady Julie areas there are many new shallow intersections (Fig 1 and Table 2) with a total of 1065 intersections (ranging from 1 to 19m) greater than 0.5g/t Au, which includes 450 greater than 1g/t Au, 162 greater than 2g/t Au, 81 greater than 3g/t Au and 53 greater than 4g/t Au.

Table 1. Target Summary HN5, HN6, HN9 and Lady Julie

Target	Length km	Significant gold intersection	Description
Lady Julie North (1,2&3)	3.4	MLJRC162 18m @ 2.1g/t from 32m	Several wide and high-grade intersections associated with workings
Lady Julie Central	1.5	MLJRC214 4m @ 16.66g/t from 32m	New NNE-trending gold zone with some excellent high-grade intersections.
Lady Julie East	1.7	MLJRC183 4m @ 1.49g/t from 16m	Southern extension of near-surface high-grade results
HN9 thickened zone	1.5	MHNRC582 104m @ 0.82g/t from 8m	Open 1km to the NE. New holes planned.
HN9 fold	1.5	RFAC408 5m @ 2.35g/t from 49m	Unusual EW trend, part of large regional folding
HN9 Thrust 2	1.2	HNR008 2m @ 12.83g/t from 36m	Drilling extension of high-grade intersection planned.
HN9 Thrust 3	1.2	MHNRC1010 4m @ 2.65g/t from 88m	Drilling extension of new intersection
HN5 South	0.7	No drilling to-date	NW extension of Eagles Nest workings
HN6 Thrust 2	1.5	MHNRC1040 4m @ 1.65g/t from 40m	Extension of intersection and initial testing of workings planned.
Total	14.2		

Major drill programmes results and interpretation is summarised in this release for 55% of the metres drilled. A further 117 RC holes for 11,192 m have assays pending. A new rig has already started with a programme of 79 holes for 7844m designed to test and extend all nine targets shown in this release with the aim of ultimately converting to an Indicated Resource.

At Hawks Nest 5, 6, 9 and Lady Julie extensive drilling programmes have been completed. (Tables 2 and 3), including 1,242 RC holes totaling 78,037m (average 63m depth) and 4 Diamond holes totaling 431m, 16,976 2–5m composites and 9,159 1m splits. This release is mainly reporting on 3666 composite assays (2-5m) from 163 RC holes (MHNRC856 to 861, 865, 867, 868, 871, 872, 874-879, 882-983, 1010, 1034-MHNRC1041, MLJRC132-MLJRC225), totaling 14,186m, deepened holes MHNRC236 from 50m to 100m, MHNRC271 from 15m to 70m, MHNRC302 from 30m to 80m, MLJRC007 from 60 to 85m and MLJRC082 from 40 to 75m and 1,365 1m splits. A further 117 RC and 4 Diamond holes for 11,192m have assays pending.

There are now at least four discernible mineralised lodes recognised that mostly dip shallowly around 20–30° to the east and plunge shallowly to the northeast within the Central Thickened zone. There are at least four stacked thickened lodes with some very thick intersections including 104m at 0.82g/t from 8m in MHNRC582 including 20m at 2.23g/t from 95m and 70m at 0.49g/t from 13m in MHNRC541. These multi-stacked thickened lodes show similarities with the adjacent Wallaby, Sunrise Dam and Jupiter major gold deposits. More results are pending for this area and further drilling is already planned to the NE where it remains open.

This Central Thickened Zone crosscuts the NNW-trending near-surface flat-dipping mineralisation and may represent a blowout zone at the intersection of the NNW shear zone with NE-trending porphyries and dolerites, where four separate shallow-dipping porphyry zones coalesce and thicken.

Following on from these exciting new results and outlining of targets associated with the thrust zones, a large drill programme of 79 RC holes for 7,844m testing the nine target areas (Figure 1 and Table 4).

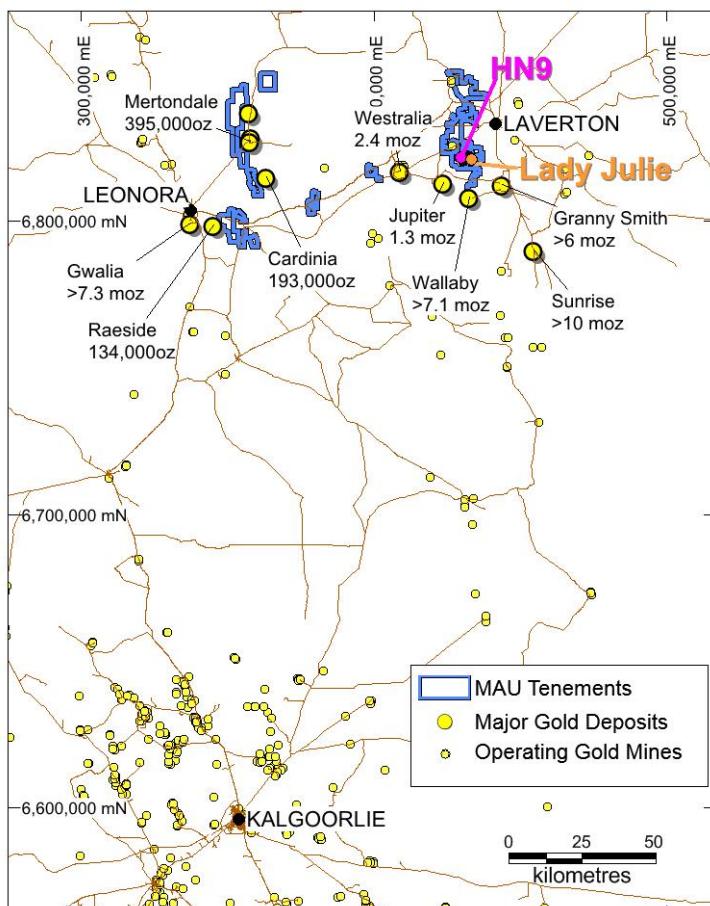

Figure 2. Location Map showing Hawks Nest and Lady Julie Projects near major gold mines.

The newly discovered multiple shallow dipping extensive thickened lodes at HN9 are a potential indicator for deeper mineralisation because all the numerous nearby large deposits in the region including Wallaby (7Moz), Sunrise Dam (10Moz) and Jupiter (1.3Moz) have persistent internal shallow-dipping mineralised lodes that are often called shear zones, which are ubiquitous throughout these deposits and have been defined down to 1500m depth at the Wallaby deposit.

magnetic resources^{NL}

In addition, many discoveries in recent times have been made by drilling below 100m because the historical drilling was far too shallow. At HN5, 6, 9 and Lady Julie the average hole depth is only 63m providing tremendous scope for upside potential. In addition, the length of our 3km mineralised shear zone is like the length of the large Jupiter, Wallaby and Sunrise Dam Deposits.

Managing Director George Sakalidis commented: "With the Australian gold price at near record levels of \$2,445 the HN9 Project area encompassing HN5, HN6, HN9 and Lady Julie being only 15km NW of the Granny Smith Operations owned by Gold Fields Australia Pty Ltd and only 10km NE of the Jupiter Operations owned by Dacian Gold Ltd and 35km north of the Sunrise Dam deposit owned by AngloGold Ashanti Ltd at Laverton, WA. (Figure 2), is shaping up and has potential for a large-scale shallow deposits. The intriguing new results from the thrust drilling has added scope and size to the potential size of the existing and have also added completely new mineralised areas worth of drill testing within these eight surface thrusts that can be up to 6km each. A further drill programme of 79 RC drillholes for 7,844m (Table 4) is planned and further analysis of the 2D seismic is also planned."

Table 3. HN5, 6, 9 and Lady Julie Completed RC and Diamond Drilling

The information in this report is based on information compiled by George Sakalidis BSc (Hons), who is a member of the Australasian Institute of Mining and Metallurgy. George Sakalidis is a Director of Magnetic Resources NL. George Sakalidis has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. George Sakalidis consents to the inclusion of this information in the form and context in which it appears in this report.

The Information in this report that relates to:

1. Promising 200m wide 0.7g/t soil geochemistry associated with extensive 1km long NS porphyries at newly named Hawks Nest 9. MAU ASX Release 15 October 2018
2. 1.1km NNW Mineralised Gold Intersections at HN9. MAU ASX Release 7 November 2018
3. Surface drilled Mineralisation extends to significant 1.5km at HN9. MAU Release 20 November 2018
4. Hawks Nest Delivers with 8m@4.2g/t Gold from 4m MAU Release 29 January 2018
5. Robust Near Surface High-grade Zone of 7m @ 4.5g/t Gold from 5m from 1m splits. MAU Release 5 March 2018
6. Hawks Nest Geochemical Survey Outlines Potential Extensions to the Prospective 7m @ 4.5g/t Gold Intercepted. MAU Release 20 March 2018
7. An 865m RC drilling programme started testing promising 7m at 4.5g/t gold and eight separate anomalous soil geochemical targets at HN5. MAU Release 10 May 2018
8. Large Gold Mineralised Shear Zone Greater Than 250m at Hawks Nest 5. MAU Release 9 June 2018
9. Gold Geochemical Target Zone Grows to Significant 2km in Length at HN9. MAU Release 7 January 2019
10. Significant 2km Gold Target is open to the East on 83% of the 24 Lines Drilled at HN9. MAU Release 4 February 2019
11. Significant 2.1km Gold Target Still open to North, South, East and at Depth. MAU Release 25 March 2019
12. Gold Target Enlarged By 47% to Significant 3.1km and is still open to the North, East and at Depth. MAU Release 22 May 2019
13. HN9 Prospective Zone Enlarged by 170% with Lady Julie Tenements. MAU Release 24 June 2019
14. 200m-Wide Gold Zone Open to The Northeast and Very Extensive Surface Gold Mineralisation Confirmed at HN9 Laverton. MAU Release 27 June 2019
15. 200m Wide Gold Zone Open to the North and New 800m Anomalous Gold Zone defined at HN9 Laverton. MAU Release 4 September 2019
16. Highest Grades Outlined at HN9 and are being Followed Up and Lady Julie Shallow Drilling Commencing Shortly. MAU Release 14 October 2019
17. Central Part of HN9 Shows Significant Thickening of The Mineralised Zone to 28m. MAU Release 28 November 2019
18. Multiple Silicified Porphyry Horizons from Deep Drilling and 57m Mineralised Feeder Zone at MAU Release 17 January 2020
19. Very High-Grade Intersection of 4m at 49g/t Adjacent to 70m Thick Mineralised Feeder Zone MAU Release 5 February 2020
20. 20 km of thickened porphyry units outlined by ground magnetic interpretation at Hawks Nest 9. MAU Release 9 March 2020
21. Further Thick Down Plunge Extensions and NW Extension Shown up at HN9. MAU Release 18 May 2020
22. Four Stacked Thickened Porphyry Lodes at HN9. MAU Release 3 August 2020
23. High-Grade Intersections in Thickened Zone at HN9. MAU Release 18 September 2020
24. Follow up of 16m at 1.16g/t gold from 64m at Lady Julie MAU Release 2 November 2020
25. Shallow Seismic searching for multiple thickened lodes MAU Release 16 November 2020
26. New thicken zone in southern part of Hawks Nest 9. MAU Release 1 December 2020
27. Two RC rigs now operating at HN9 and Lady Julie. MAU Release 11 January 2021

All of which are available on www.magres.com.au

This announcement contains forward-looking statements which involve a number of risks and uncertainties. These forward-looking statements are expressed in good faith and believed to have a reasonable basis. These statements reflect current expectations, intentions or strategies regarding the future and assumptions based on currently available information. Should one or more of the risks or uncertainties materialize, or should underlying assumptions prove incorrect, actual results may vary from the expectations, intentions and strategies described in this announcement. No obligation is assumed to update forward looking statements if these beliefs, opinions and estimates should change or to reflect other future developments.

JORC Code, 2012 Edition – Table 1 report

Section 1 Sampling Techniques and Data

(Criteria in this section apply to all succeeding sections.)

Criteria	JORC Code explanation	Commentary
Sampling techniques	<ul style="list-style-type: none"><i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i><i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i><i>Aspects of the determination of mineralisation that are Material to the Public Report.</i><i>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i>	<ul style="list-style-type: none">For RAB sampling, 1m completed by Duketon (A22722)For RAB sampling, 4m composites completed by Gwalia (A29728)For AC sampling, 4m composites and 1m splits completed by Metex (A62445, A72419)For RC sampling, 2m composites completed by Julia Mines (A18060) and 5m composites completed by Placer (A34935)All the reported historical drilling and their relevant sampling procedures, QAQC and analytical methods etc. are referred to in the original WAMEX reports (references in the main text of ASX release of 7 November 2018).The targets at HN9 have been tested by RC drilling. A 1 metre split is taken directly from a cone splitter mounted beneath the rig's cyclone. The cyclone and splitter are cleaned regularly to minimize contamination.Sampling and QAQC procedures are carried out using Magnetic's protocols as per industry sound practice.RC drilling was used to obtain bulk 1 metre samples from which composite 4m samples were prepared by spear sampling of the bulk 1m samples. 3kg of the composite sample was pulverized to produce a 50g charge for fire assay for gold. The assay results of the composite samples are used to determine which 1m samples from the rig's cyclone and splitter are selected for fire assay using the same method.
Drilling techniques	<ul style="list-style-type: none"><i>Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc).</i>	<ul style="list-style-type: none">Rotary air blast (RAB) drilling with a blade bit.Reverse Circulation (RC) drilling was carried out using a face sampling hammer with a nominal diameter of 140mm.Aircore (AC) drilling.
Drill sample recovery	<ul style="list-style-type: none"><i>Method of recording and assessing core and chip sample recoveries and results assessed.</i><i>Measures taken to maximise sample recovery and ensure representative nature of the samples.</i>	<ul style="list-style-type: none">RC sample recoveries are visually estimated qualitatively on a metre basis.Various drilling additive (including muds and foams) have been used to condition the RC holes to maximize recoveries and sample quality.

Criteria	JORC Code explanation	Commentary
	<ul style="list-style-type: none">• Whether a relationship exists between sample recovery and grade and whether sample bias may have occurred due to preferential loss/gain of fine/coarse material.	<ul style="list-style-type: none">• Insufficient drilling and geochemical data is available at the present stage to evaluate potential sample bias. Drill samples are sometimes wet which may result in sample bias because of preferential loss/gain of fine/coarse material.
Logging	<ul style="list-style-type: none">• Whether core and chip samples have been geologically and geotechnically logged to a level of detail to support appropriate Mineral Resource estimation, mining studies and metallurgical studies.• Whether logging is qualitative or quantitative in nature. Core (or costean, channel, etc) photography.• The total length and percentage of the relevant intersections logged.	<ul style="list-style-type: none">• Lithology, alteration and veining is recorded and imported into the Magnetic Resources central database. The logging is of sufficient standard to support a geological resource.• All drill holes were logged in full.
Sub-sampling techniques and sample preparation	<ul style="list-style-type: none">• If core, whether cut or sawn and whether quarter, half or all core taken.• If non-core, whether riffled, tube sampled, rotary split, etc and whether sampled wet or dry.• For all sample types, the nature, quality and appropriateness of the sample preparation technique.• Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples.• Measures taken to ensure that the sampling is representative of the in-situ material collected, including for instance results for field duplicate/second-half sampling.• Whether sample sizes are appropriate to the grain size of the material being sampled.	<ul style="list-style-type: none">• RC samples are cyclone split to produce a 2-3kg sample. 4m composite samples are prepared by tube sampling bulk 1m samples.• No field duplicates were taken.• Sample sizes are appropriate for the grain size being sampled.
Quality of assay data and laboratory tests	<ul style="list-style-type: none">• The nature, quality and appropriateness of the assaying and laboratory procedures used and whether the technique is considered partial or total.• For geophysical tools, spectrometers, handheld XRF instruments, etc, the parameters used in determining the analysis including instrument make and model, reading times, calibrations factors applied and their derivation, etc.• Nature of quality control procedures adopted (eg standards, blanks, duplicates, external laboratory checks) and whether acceptable levels of accuracy (ie lack of bias) and precision have been established.	<ul style="list-style-type: none">• RC samples are assayed using a 50g charge and a fire assay method with an AAS finish which is regarded as appropriate. The technique provides an estimate of the total gold content.• Industry standard standards and duplicates are used by the NATA registered laboratory conducting the analyses
Verification	<ul style="list-style-type: none">• The verification of significant intersections by	<ul style="list-style-type: none">• No independent verification of drill intersections

Criteria	JORC Code explanation	Commentary
<i>of sampling and assaying</i>	<i>either independent or alternative company personnel.</i> <ul style="list-style-type: none">• <i>The use of twinned holes.</i>• <i>Documentation of primary data, data entry procedures, data verification, data storage (physical and electronic) protocols.</i>• <i>Discuss any adjustment to assay data.</i>	has yet been carried out. <ul style="list-style-type: none">• Twin holes are planned to be drilled.• Primary data is entered into an in-house database and checked by the database manager.• No adjustment of assay data other than averaging of repeat and duplicate assays• No verification of historically reported drilling has been carried out
<i>Location of data points</i>	<ul style="list-style-type: none">• <i>Accuracy and quality of surveys used to locate drill holes (collar and down-hole surveys), trenches, mine workings and other locations used in Mineral Resource estimation.</i>• <i>Specification of the grid system used.</i>• <i>Quality and adequacy of topographic control.</i>	<ul style="list-style-type: none">• Drill collars located by hand- held GPS with an accuracy of +/- 5m.• Grid system: MGAz51 GDA94.• Topographic control using regional DEM data.
<i>Data spacing and distribution</i>	<ul style="list-style-type: none">• <i>Data spacing for reporting of Exploration Results.</i>• <i>Whether the data spacing, and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</i>• <i>Whether sample compositing has been applied.</i>	<ul style="list-style-type: none">• RC drilling was carried out at HN9 prospect. 1m samples were composited into 4m composite samples for assay.• RC drilling was carried out and 1m samples were composited into 2m and 5m composite samples for assay
<i>Orientation of data in relation to geological structure</i>	<ul style="list-style-type: none">• <i>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known, considering the deposit type.</i>• <i>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias, this should be assessed and reported if material.</i>	<ul style="list-style-type: none">• At HN9 historical geological mapping and the trends of old gold diggings indicate a general NNW to SSE trend to the geological structures. The historical drilling was carried out orthogonal to this trend.
<i>Sample security</i>	<ul style="list-style-type: none">• <i>The measures taken to ensure sample security.</i>	<ul style="list-style-type: none">• Samples were stored in the field prior to dispatch to Perth using a commercial freight company.
<i>Audits or reviews</i>	<ul style="list-style-type: none">• <i>The results of any audits or reviews of sampling techniques and data.</i>	<ul style="list-style-type: none">• No audits or reviews of the sampling techniques and data from historical drilling have been carried out.

Section 2 Reporting of Exploration Results

(Criteria listed in the preceding section also apply to this section.)

Criteria	JORC Code explanation	Commentary
<i>Mineral tenement and land tenure status</i>	<ul style="list-style-type: none"> <i>Type, reference name/number, location and ownership including agreements or material issues with third parties such as joint ventures, partnerships, overriding royalties, native title interests, historical sites, wilderness or national park and environmental settings.</i> <i>The security of the tenure held at the time of reporting along with any known impediments to obtaining a licence to operate in the area.</i> 	<ul style="list-style-type: none"> The HN9 target area is situated on exploration Licence E38/3127 and M38/1041 held 100% by Magnetic Resources NL. The adjacent Lady Julie targets are on Prospecting Licences P38/4346, P38/4379, P38/4384 held 100% by Magnetic Resources NL. All the above are granted tenements with no known impediments to obtaining a licence to operate.
<i>Exploration done by other parties</i>	<ul style="list-style-type: none"> <i>Acknowledgment and appraisal of exploration by other parties.</i> 	<ul style="list-style-type: none"> The HN9 area has been subject to historical exploration refer to text
<i>Geology</i>	<ul style="list-style-type: none"> <i>Deposit type, geological setting and style of mineralisation.</i> 	<ul style="list-style-type: none"> HN9 Two mineralization styles have been observed: quartz veining and stock working in the porphyries and shear-hosted quartz veins on porphyry-amphibolite contacts.
<i>Drill hole Information</i>	<ul style="list-style-type: none"> <i>A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes:</i> <ul style="list-style-type: none"> <i>easting and northing of the drill hole collar</i> <i>elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar</i> <i>dip and azimuth of the hole</i> <i>down hole length and interception depth</i> <i>hole length.</i> <i>If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the understanding of the report, the Competent Person should clearly explain why this is the case.</i> 	<ul style="list-style-type: none"> Refer to table in the text of this release.
<i>Data aggregation methods</i>	<ul style="list-style-type: none"> <i>In reporting Exploration Results, weighting averaging techniques, maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated.</i> <i>Where aggregate intercepts incorporate short</i> 	<ul style="list-style-type: none"> No weighting or cutting of gold values, other than averaging of duplicate and repeat analyses.

Criteria	JORC Code explanation	Commentary
	<p><i>lengths of high-grade results and longer lengths of low-grade results, the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail.</i></p> <ul style="list-style-type: none"><i>The assumptions used for any reporting of metal equivalent values should be clearly stated.</i>	
<i>Relationship between mineralisation widths and intercept lengths</i>	<ul style="list-style-type: none"><i>These relationships are particularly important in the reporting of Exploration Results.</i><i>If the geometry of the mineralisation with respect to the drill hole angle is known, its nature should be reported.</i><i>If it is not known and only the down hole lengths are reported, there should be a clear statement to this effect (eg 'down hole length, true width not known').</i>	<ul style="list-style-type: none">The relationships between mineralization widths and intercept lengths at HN9 remain to be clarified.
<i>Diagrams</i>	<ul style="list-style-type: none"><i>Appropriate maps and sections (with scales) and tabulations of intercepts should be included for any significant discovery being reported. These should include, but not be limited to a plan view of drill hole collar locations and appropriate sectional views.</i>	<ul style="list-style-type: none">Refer to text.
<i>Balanced reporting</i>	<ul style="list-style-type: none"><i>Where comprehensive reporting of all Exploration Results is not practicable, representative reporting of both low and high grades and/or widths should be practiced avoiding misleading reporting of Exploration Results.</i>	<ul style="list-style-type: none">Plus 1g/t Au intersections from the RC drilling have been reported in this release.
<i>Other substantive exploration data</i>	<ul style="list-style-type: none"><i>Other exploration data, if meaningful and material, should be reported including (but not limited to): geological observations; geophysical survey results; geochemical survey results; bulk samples – size and method of treatment; metallurgical test results; bulk density, groundwater, geotechnical and rock characteristics; potential deleterious or contaminating substances.</i>	<ul style="list-style-type: none">Metallurgical results refer to ASX Release 27/10/2020 Positive metallurgical results from Hawks Nest 9.
<i>Further work</i>	<ul style="list-style-type: none"><i>The nature and scale of planned further work (eg tests for lateral extensions or depth extensions or large-scale step-out drilling).</i><i>Diagrams clearly highlighting the areas of possible extensions, including the main geological interpretations and future drilling areas, provided this information is not commercially sensitive.</i>	<ul style="list-style-type: none">Table 4 shows the drilling planned. Further deeper drilling will be planned to follow up results from deeper intersections with 79 RC holes totaling 7.844m.As outlined in this release.A map and table of the proposed drilling is shown in this release.
