

3 JUN 2021

ASX ANNOUNCEMENT

ASX: TMG

Investor Presentation

Trigg Mining Limited (ASX: TMG) (Trigg or the Company) is pleased to release a copy of its latest Investor Presentation.

This announcement was authorised to be given to ASX by the Board of Directors of Trigg Mining Limited.

Keren Paterson

Managing Director & CEO

Keren Vaterson

Trigg Mining Limited

THE TRIGG MINING INVESTMENT PROPOSITION

Modern, purpose-driven company helping to deliver global food security

Located in the low-risk jurisdiction of Western
Australia

Strategic landholding – 100% rights to 3,500km² of an evolving sulphate of potash production hub

Lake Throssell — a rapidly developing large, high-grade SOP discovery & economic studies underway

Sustainable mining – solar evaporation of hyper-saline brine

Sulphate of Potash (SOP) – a premium mineral fertiliser essential for high-value agricultural products

Strong global market and demand fundamentals driven by global mega trends

Australia currently imports all its potash needs

CORPORATE OVERVIEW

Board of Directors

Managing Director & CEO Keren Paterson

Non Executive Chairperson Michael (Mike) Ralston

Non Executive Director Rod Baxter

Non Executive Director William (Bill) Bent

Management Team

Company Secretary Karen Logan

Study Manager Chris Williams

Principal Hydrogeologist Adam Lloyd

Advisor – Project Director John Turney

Advisor - Corporate Finance John Ciganek, Euclase Capital

TMG 12-month share price

Based on share price as at 01/06/2021

POSITIONED TO RAPIDLY RESPOND TO GROWING DEMAND FOR HIGH-QUALITY FERTILISERS

100% ownership of an evolving SOP production hub in Western Australia.

- 1 Inferred Mineral Resource of 14.2Mt @ 10.3kg/m³ SOP¹ plus Exploration Target of 2.6 9.4Mt
- Lake Rason SOP Project
 Inferred Mineral Resource of
 5.9Mt @ 5.8kg/m³ SOP¹
 - ^{1.} See Competent Person Statement

➤ LARGE, HIGH GRADE SOP DEPOSIT

Over 3,500km² of strategic tenure located close to energy and transport infrastructure

Total Mineral Inventory of more than 20Mt of SOP with prospectivity to expand further

Experienced and passionate team successful in finding, developing and operating sustainable mines in Western Australia

The potential quantity and grade of the Exploration Target is conceptual in nature. There has been insufficient exploration in these areas to estimate a Mineral Resource. It is uncertain if further exploration will result in the estimation of a Mineral Resource.

Total Drainable Mineral Resources (TDMR): ASX announcements - Australian Potash (02/11/2020), SO4 Limited (11/10/2019), Kalium Lakes (23/10/2020) and Trigg Mining (11/05/2021). All figures are rounded.

WHY SULPHATE OF POTASH?

WHAT IS SULPHATE OF POTASH (SOP)?

SOP (Potassium Sulphate, K_2SO_4) is an essential fertiliser for high-value, chloride sensitive crops such as fruit, vegetables, avocados, coffee beans, grapes, tree nuts, cocoa, anything grown under glass and in arid and acidic soils.

POTASSIUM

 (K_2)

- > Essential for all living things
- Promotes resistance to disease, drought and frost
- > Improves quality, taste and appearance
- Required in large quantities for proper plant growth and optimal crop yields

SULPHATE (SO₄)

SULPHUR + OXYGEN

- Necessary for the formation of chlorophyll and plant proteins
- > Increases crop yields and produce quality

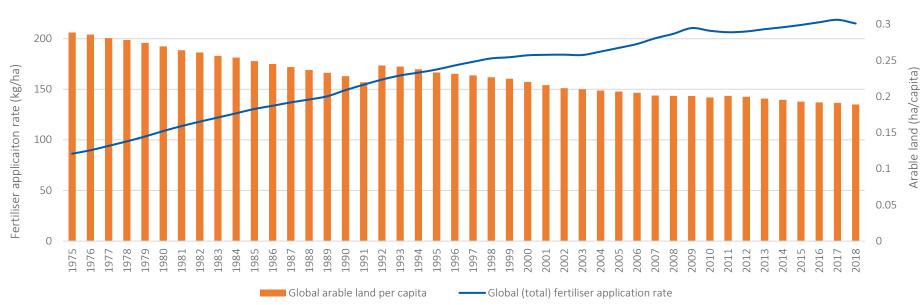

Vs. MURIATE OF POTASH (MOP)

Muriate of Potash (Potassium Chloride) is a cheaper, more abundant source of potash, BUT it contains almost 50% chloride which is detrimental to chloride-sensitive crops and arid soils. It also contains no sulphur.

STEADY DEMAND GROWTH DRIVEN BY GLOBAL MEGA TRENDS

Global arable land and fertiliser application rates

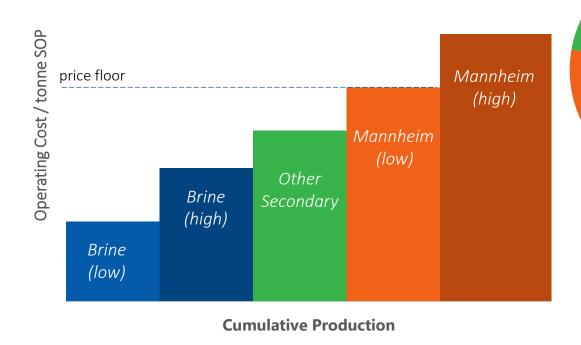

0.35

BRINE SOP – LOWEST COST PRODUCTION

- Primary production of SOP, from brine, is the lowest cost source of SOP but there is insufficient resources available to meet global demand of ~7Mtpa.
- The Mannheim Process is required to meet demand. The process heats MOP with sulphuric acid to around 800°C, producing hydrochloric acid as a waste product.

• As both methods are needed to meet global demand the Mannheim Process creates an industry price floor well-above the cost of brine sources.

With the natural endowment of the minerals dissolved in brine and the ability to harvest solar evaporation to produce SOP, brine producers are generally low-cost producers

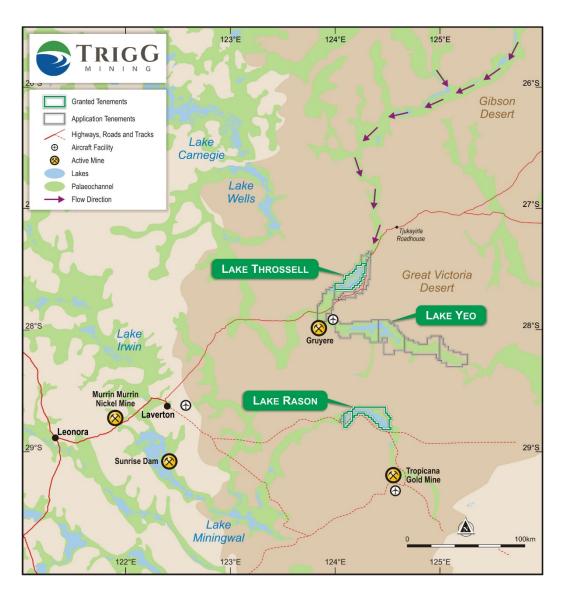

TRIGG MINING'S SOP PROJECTS

GEOLOGY / HYDROGEOLOGY

The projects lie near the terminus of extensive palaeovalley catchment areas (ancient river valleys) which extend for over 500km and are underlain by potassium-bearing source rocks (granites, sandstones and salt diapirs).

Brine solutions carrying potassium mineralisation have been concentrating in the palaeovalleys and salt lakes (evaporite systems) for millions of years.

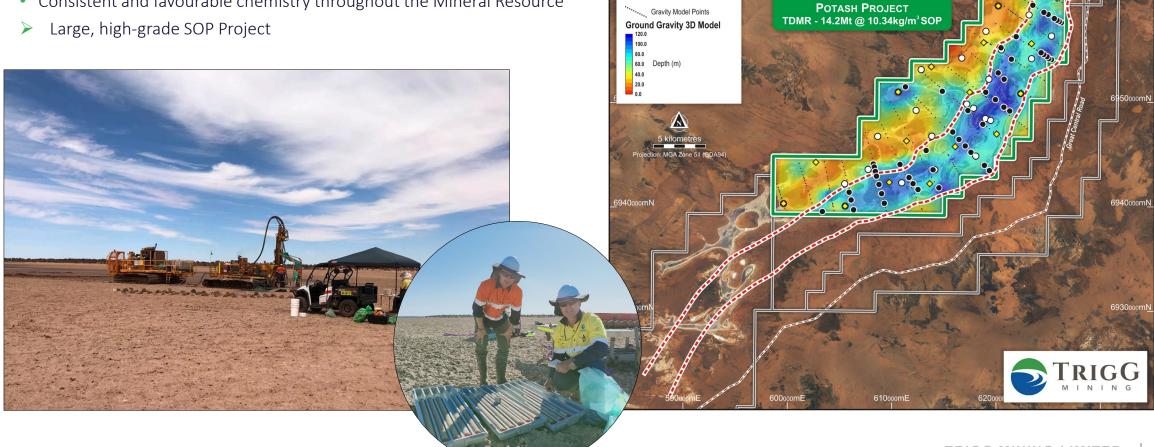

LAKE THROSSELL SULPHATE OF POTASH PROJECT

An extensive sulphate of potash discovery

HIGHLIGHTS

- Inferred Mineral Resource 14.2Mt @ 4,638mg/L K (or 10.34kg/m³ SOP)
- Exploration Target of an additional 2.6 to 9.4Mt SOP
- Consistent and favourable chemistry throughout the Mineral Resource

LAKE THROSSELL

Granted Tenements Application Tenements

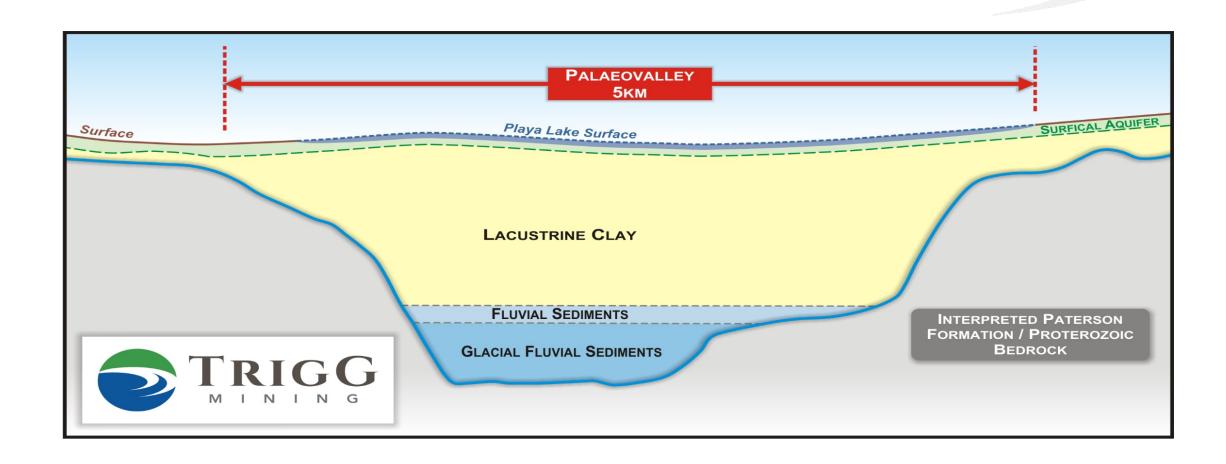

Aircore Drill Hole Lake Rotary Drill Hole Hand Auger Drill Hole

Highways, Roads and Tracks

LAKE THROSSELL

LAKE THROSSELL SULPHATE OF POTASH PROJECT

Palaeovalley up to 5km wide, 100m deep and ~36km along strike within the central granted tenement

LAKE THROSSELL SULPHATE OF POTASH PROJECT

Located nearby established Infrastructure

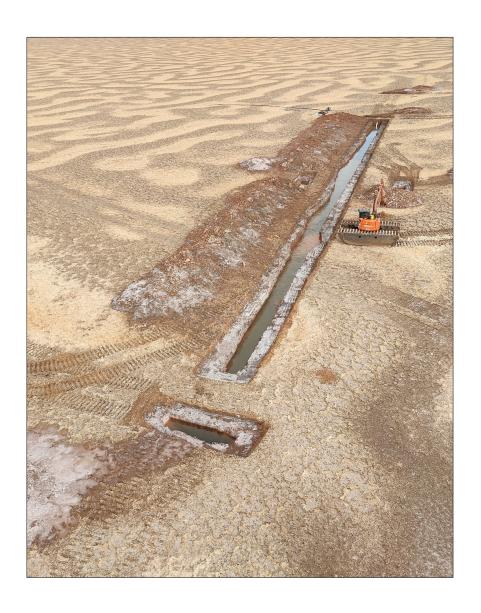

HIGHLIGHTS

- The Great Central Road passes through the Project connecting Laverton in WA to Winton in QLD via Alice Springs.
 - Upgrade underway to establish the Outback Highway
 reliable trucking route across central Australia
 - Works have commenced with the first 40km from Laverton currently underway
- ~60km to the Yamarna gas pipeline
- ~300km to the Malcom Railhead (potentially all sealed)
- ~950km total distance to the deep water port of Esperance

LAKE THROSSELL SOP PROJECT DEVELOPMENT

Next Steps

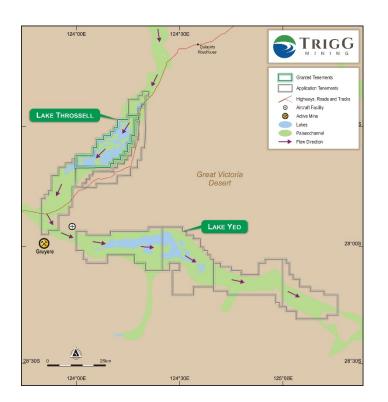

- Establish Indicated Mineral Resource trenching and pump testing, underway
- Continue bench-top evaporation trials
- Continue base-line environmental surveys required for project approvals
- Commence Scoping study

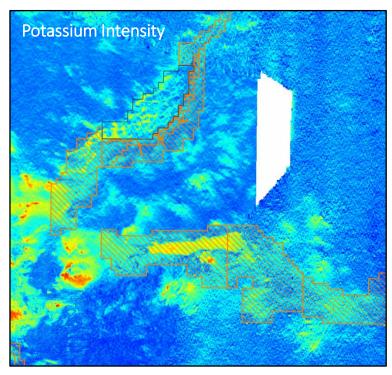

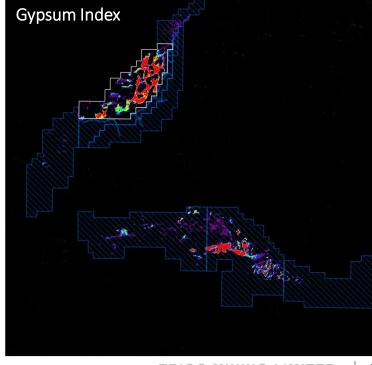

LAKE YEO SULPHATE OF POTASH PROJECT

Potential Lake Throssell Expansion

- Lake Yeo SOP Project covers 1,915km² including more than 200km² of playa lake and almost 130km of interpreted palaeovalley
- The Project lies along the palaeovalley from Lake Throssell ~35km to the south
- Radiometric potassium (K) intensity² shows elevated K at the lake surface compared to surrounding regolith to a greater extent than Lake Throssell
- The Aster Gypsum Index² maps high levels of gypsum present in parts of the lake indicating sulphate (SO₄) presence at the surface

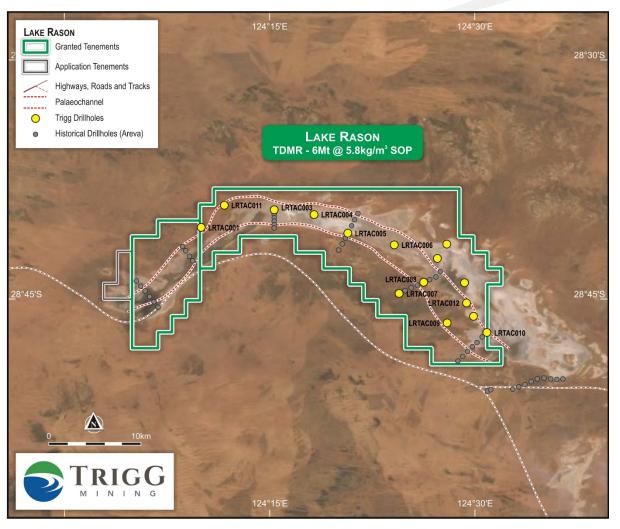

LAKE RASON SULPHATE OF POTASH PROJECT

Potential satellite project

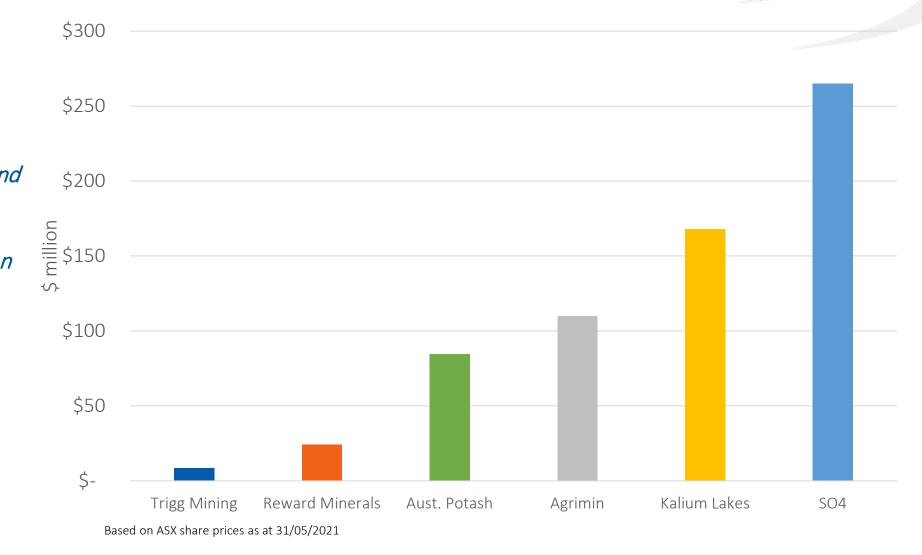

- The Lake Rason Project covers 500km² including 195km² of playa lake and 65km of interpreted palaeovalley
- Contains an Inferred Mineral Resource of 6Mt @ 5.1kg/m³ SOP¹
- Potential to increase volume and grade to the west within the newly granted tenement, with the westernmost hole drilled (LRTAC001) returning results of up to 6.6kg/m³ SOP

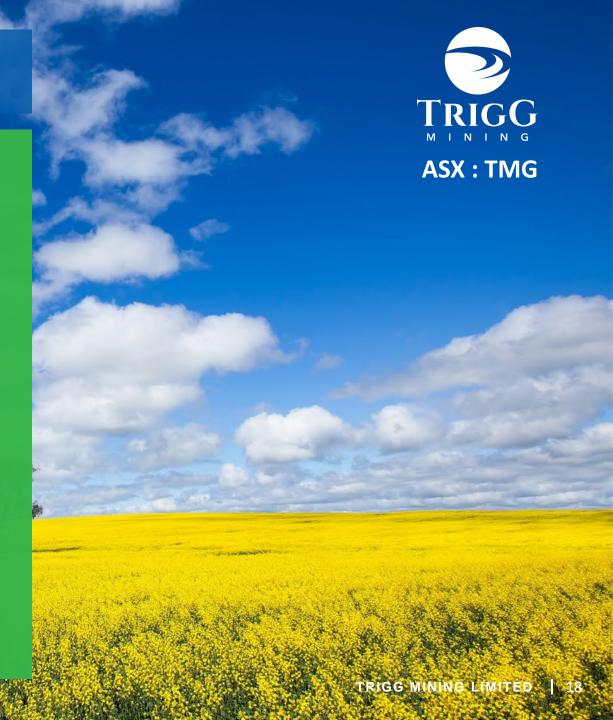

MARKET CAPITALISATION OF AUSTRALIAN SOP COMPANIES

Trigg Mining — a ground floor investment opportunity in an exciting new Australian growth industry

WHY INVEST IN TRIGG MINING?

- Lake Throssell A large, high-grade discovery with genuine potential to become a long-life, low cost primary source of SOP
- 2. Tier 1 location
- 3. Well supported by infrastructure roads, rail, airports and gas pipelines
- 4. Total Mineral Inventory of >20Mt of SOP, with further potential to expand
- 5. Strong global market and demand fundamentals driven by global mega trends
- 6. A motivated and experienced team, driven to deliver value for shareholders
- 7. Company is highly leveraged to growth

DISCLOSURES AND DISCLAIMERS

Cautionary Statement

This presentation (Presentation) is for informational purposes only and is not a prospectus, disclosure document or offer document under the Corporations Act 2001 (Cth) (Corporations Act) or any other law. This Presentation does not constitute, and is not to be construed as, an offer to issue or sell, or a solicitation of an offer or an invitation to subscribe for, buy or sell securities in Trigg Mining Limited ACN 168 269 752 (TMG).

This Presentation does not contain, and does not purport to contain, all information that recipients may require to make an informed assessment of TMG or its securities. Statements in this Presentation are made only as at the date of this Presentation unless otherwise stated and remain subject to change without notice. Neither TMG nor any of its directors, officers, employees, agents or consultants makes any representation or warranty, express or implied, as to the fairness, reliability, accuracy or completeness of the information contained in this Presentation, or as to any omission from this Presentation. To the maximum extent permitted by law, each such person disclaims any liability (including by reason of negligence or negligent misstatement) in relation to this Presentation, the information contained in it, or any omissions from it. To the maximum extent permitted by law, each such person also disclaims any responsibility to inform any recipient on any matter which subsequently comes to their notice which may affect the information contained in this Presentation, and undertakes no obligation to provide any additional or updated information whether as a result of new circumstances, future events or results or otherwise.

Forward Looking Statements

This Presentation contains 'forward-looking information' that is based on TMG's expectations, estimates and projections as of the date on which the statements were made. This forward-looking information includes, among other things, statements with respect to prefeasibility and definitive feasibility studies, TMG's business strategy, plans, development, objectives, performance, outlook, growth, cash flow, projections, targets and expectations, mineral reserves and resources, results of exploration and related expenses. Generally, this forward-looking information can be identified by the use of forward-looking terminology such as 'outlook', 'anticipate', 'project', 'target', 'potential', 'likely', 'believe', 'estimate', 'expect', 'intend', 'may', 'would', 'could', 'schould', 'schould', 'schoule', 'gover and similar expressions. Persons reading this Presentation are cautioned that such statements are only predictions, and that TMG's actual future results or performance may be materially different. Forward-looking information is subject to known and unknown risks, uncertainties and other factors that may cause TMG's actual results, level of activity, performance or achievements to be materially different from those expressed or implied by such forward-looking information. Forward-looking information is developed based on assumptions about such risks, uncertainties and other factors set out herein, including but not limited to the risk factors set out in Section 5 of the prospectus dated 17 September 2020. A copy of the prospectus may be viewed online at www.triggmining.com.au

Competent Person Statement

For information referring to the exploration results in this document, refer to announcements dated, 02/03/20, 16/02/21, 09/03/21, 22/03/21 and 11/05/21. The Company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcements and, in the case of estimates of Mineral Resources, Exploration Target or Ore Reserves that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcements; and that the information in the announcement relating to exploration results is based upon, and fairly represents the information and supporting documentation prepared by the named Competent Persons.

Note: Errors may be present due to rounding, approximately 1.2Mt of Drainable SOP Mass is present in Exploration License Application E38/3437. Approximately 2.86Mt of the Drainable SOP Mass is present in Exploration License Applications E38/3544, E38/3483, E38/3488, and E38/3537. Total porosity and total brine SOP mass is provided to compare the total SOP tonnes with the drainable Resources. As can be seen, the total brine volume of 102.53Mt is significantly higher than reported drainable brine volume of 20.19Mt. The drainable brine volume represents the amount of SOP that can be abstracted from the deposit under normal pumping conditions. For economic production, the drainable brine volume is the most important volume because only a proportion of the total brine present can be typically abstracted from the deposit. The potential quantity and grade of the Exploration Target is conceptual in nature. There has been insufficient exploration in these areas to estimate a Mineral Resource. It is uncertain if further exploration will result in the estimation of a Mineral Resource.

APPENDIX B – SOP EVAPORATION PROCESS
