

## **Nexus-Vita engages Advanced Human Imaging to complete application integration for USD\$500,000.**

### **Highlights**

- **Nexus-Vita signs integration agreement.**
- **Nexus-Vita has agreed to pay AHI USD\$500,000 to complete CompleteScan integration.**
- **Nexus-Vita will work with AHI to release the app in September 2021.**
- **CompleteScan Technology integration will be accelerated.**

**Advanced Human Imaging Limited (ASX: AHI) (AHI or the company)** is pleased to inform shareholders that the company has signed a significant binding agreement with Nexus Vita Pte Ltd (**Nexus-Vita**), a Singapore based Health monitoring and management technology company engaging AHI to conclude the integration of the AHI CompleteScan Face and Body Scan capabilities into the Nexus-Vita application.

Nexus-Vita has been plagued over the last 6 months with rolling lockdowns in both Japan and Singapore, causing an endless number of delays and loss of development staff, whilst trying to complete the acquisition and development of the Nexus-Vita application. Nexus-Vita has agreed today to pay AHI a fixed amount of USD\$500,000 for the completion of the integration to be performed by the AHI development team, ending the delays and extension sought throughout the past 6 months.

Nexus-Vita has completed the initial medical health monitoring, prevention, and engagement platform, which is now ready to have the CompleteScan integrated in readiness for release to the customers of Nexus-Vita.

Nexus-Vita has created an application for individuals to track and manage all facets of their health and health records, the platform is a proprietary state of the art health management and personal record keeping system in a single digital environment, allowing an individual to save their records (both medical and health basis) in a single, easy to access digital platform. The data spans multiple environments from wearable data to training, nutrition, care programs, and allows the sharing of information with their doctor, healthcare provider, personal trainer or chronic disease management specialist. Nexus-Vita plans to drastically improve user-to-professional data sharing and management. They believe this will improve lifetime health, reduce the need for medical interventions, and save cost and resources for the user and health systems through its partnership with AHI and use of the integrated CompleteScan platform.

Nexus-Vita and AHI will collaborate on this final step to integrate the CompleteScan platform into all of Nexus-Vita's verticals, commencing with an initial integration into Nexus-Vita's pre-emptive health platform using FaceScan and BodyScan. Under the terms of the binding agreement, AHI will deliver a market-ready integration into the Nexus-Vita platform by 31<sup>st</sup> August 2021.

### **Vlado Bosanac, Chairman and Chief Executive Officer of AHI, said:**

“Bringing the integration to my team will not only deliver a world class integration, but it will also negate concerns many shareholders have aired due to the rolling delays and extensions we have granted over the past 6 months. Nexus-Vita have never waived from their genuine commitment to the transaction and their enthusiasm for the capture suite the AHI technology brings to the table.

Nexus-Vita understand they are losing valuable time in market due to these delays and having the AHI team conclude the integrations bring not only certainty but quality assurance. Nexus Vita want to take

advantage of the global need and growth the digital health sector is experiencing. The world has experienced significant increase with individuals reluctant to attend medical facilities and the compounding strain being experienced by the healthcare system worldwide as a result of the current pandemic.

I am pleased to be working with Jeff and the Nexus-Vita team to provide the CompleteScan platform capabilities to their unique intervention, monitoring and pre-emptive health solution”.

**Summary of Material Terms:**

<b>Item</b>	<b>Summary/Details</b>
Parties	Advanced Human Imaging Limited (AHI) Nexus-Vita Pte Ltd
Conditions Precedent	None
Agreement	Binding Integration Agreement
Integration Completion	The parties will work together to conclude the market ready integrated solution no later than 31 <sup>st</sup> August 2021
Integration Cost	The parties have agreed a fixed cost of USD\$500,000, to integrate both iOS & Android platforms of CompleteScan.
Governing Law	Australia

**Jeff Marquass Chief Executive Officer of Nexus-Vita said:**

“To say I have been frustrated with the delays would be an understatement. We have a world class platform and bringing it into a mobile phone-based consumer product would have its challenges at the best of times, without a global pandemic effecting travel, our workforce, and the global economies.

A key differentiator of our platform is we will engage with our consumers to assist them in understanding their chronic disease risk. The greatest failure I have witnessed in all governments and healthcare systems in the last decade, is the inability to identify and engage with their population before an intervention being required. Nexus-Vita will work with governments, healthcare providers, and insurers to distribute our early warning system for better health outcomes. Billions of dollars are spent each year on mass-marketing by government health organizations around the world, warning people of the risks of poor nutrition, having excess body fat, or simply being sedentary.

The COVID-19 pandemic has accelerated acceptance of remote monitoring of care, and our combined applications will now empower individuals to take early action rather than event driven care, which is often too late.”

**About Nexus-Vita**

At its core, Nexus-Vita is a centralized intervention, medical and health data centre. Nexus-Vita’s mission is to improve the health and life expectancy of people at a population level through better knowledge, understandable data, risk identification, intervention, and treatment.

The platform empowers its users, clinicians, care teams, patients, and caregivers by having convenient, secure access to comprehensive health information (health records, claims, cost, and data from medical devices).

Our technology can aid in preventing disease, identifying the need to adjust medications, and delivering interventions. Continuous monitoring can lead health care organizations to personalized therapies that address unmet medical needs prior to an event, by simply understanding the user along their journey and not at a single point in time.

Nexus-Vita will bridge the gap between the user, health, insurance, and medical industries to give clinicians, care teams, patients, and caregivers better data, processed to help their specific needs in a mass-market on an individualized basis.

For everyday users and patients that means a digital platform aggregating all of their important health and medical data. For the medical and care industry, it means better data management. All of their client data is stored, processed, and made accessible to them. This will mean less data handling for them and better care for their clients.

**About Advanced Human Imaging:**

The Company has developed and patented a proprietary technology which enables its users to privately check, track, and accurately assess their dimensions, solely using a smartphone. AHI refers to this physical measurement and analysis tool as “BodyScan.” AHI is globalizing its technology in order to assist individuals, communities and populations live healthier lives, worldwide. AHI’s patented technology allows individuals, via an automated system, take a series of images of themselves using a smartphone which delivers accurate and repeatable measurements across the individual’s entire body. These measurements allow the individual to understand his/her dimensions and the physical changes which they are undergoing through diet, exercise and lifestyle.

Further, the images that AHI captures also provide the individual with an understanding of their health risk related to certain chronic diseases, (including obesity and related diseases such as diabetes). AHI uses global standards set by the World Health Organization (WHO), and the International Diabetes Federation (IDF) when assessing and deriving this information feedback loop.

The Company has recently advanced its technology to run these complex mathematical algorithms directly on the user’s smartphone, rather than limiting that computation to the Cloud. AHI’s overarching technology strategy has been to take advantage of the mobile device’s accelerated performance, specifically by utilizing on-device general purpose Graphic Processing Units (GPU). AHI delivers a non-invasive, highly accurate and privacy-sensitive solution which returns results within seconds. The Company leverages machine-learning and computer vision to analyze images, detect pose and joint features, and create non-personally identified data for measurement estimation.

This unrivalled process allows us to produce exceptional results and simplify the output of useful, reliable, digital measurements and remove the human error otherwise present in traditional methods. Advanced Human Imaging’s MultiScan platform simplifies the collection of biometric measurements across the body, vital signs and skin conditions, reducing the human error present in traditional information gathering and analysis methods.
