

Hualilan drilling confirms a second deeper zone and doubles the vertical extent of high-grade mineralisation at Sentazon

Highlights

- First 13 holes in CEL's follow up Sentazon drill program significantly extend the high-grade mineralisation and confirm a second zone of mineralisation with results including (Table 1):
 - 16.9m at 16.9 g/t AuEq² - 14.1 g/t Au, 18.3 g/t Ag, 5.8% Zn from 193.0m including; 7.1m at 32.2 g/t AuEq² - 28.1 g/t Au, 36.1 g/t Ag, 8.3% Zn from 194.2m and; 2.9m at 18.8 g/t AuEq² - 3.1 g/t Au, 13.0g/t Ag, 12.6% Zn from 207.1m (GNDD-296)
 - 50.0m at 1.9g/t AuEq² - 1.8g/t Au, 1.0g/t Ag, 0.1% Zn from 133.0m including; 2.4m at 17.3 g/t AuEq² - 17.2 g/t Au, 3.76 g/t Ag, 0.3% Zn from 151.6m (GNDD-253)
 - 3.8m at 24.8 g/t AuEq² - 22.1g/t Au, 125.3 g/t Ag, 2.6% Zn from 48.3m (GNDD-214)
 - 9.9m at 6.2 g/t AuEq² - 3.4g/t Au, 44.0 g/t Ag, 5.3% Zn from 147.5m (GNDD-299)
- Drilling has doubled the dip extent of the main high-grade mineralisation at Sentazon to 200 metres, with mineralisation remaining open along strike and at depth.
- Drilling has confirmed the earlier intersection in GNDD-142 is a new zone of mineralisation 50 metres below the existing mineralisation in the footwall.
 - GNDD-142: 40.0m at 6.2 g/t AuEq² (refer ASX Release 29 January 2021);
- This new zone in the footwall has significant width and down-dip extent with deeper drilling (assays pending) intersecting this new footwall zone a further 200 metres down dip.
- Ten additional holes completed (assays pending) with another nine holes planned in the current Sentazon drilling which, based on these early results, is likely to be extended.

Commenting on the results, CEL Managing Director, Mr Kris Knauer, said

"Sentazon, lies at what was thought to be the southern end of the mineralisation at Hualilan, and has received relatively little drilling compared to other parts of the Hualilan Gold Project.

The current Sentazon drilling produced several significant high-grade intersections including 16.9 metres at 16.9 g/t AuEq. It has doubled the vertical extent of the mineralisation at Sentazon and confirmed a second, and much wider, zone at depth. Both zones of mineralisation at Sentazon extend over at least 200 metres down-dip, and remain open and strongly mineralised at depth.

Based on the results from the first holes in this program we will be dedicating quite a few more metres from our 120,000 metre drill program and at least one of the nine rigs on site to Sentazon."

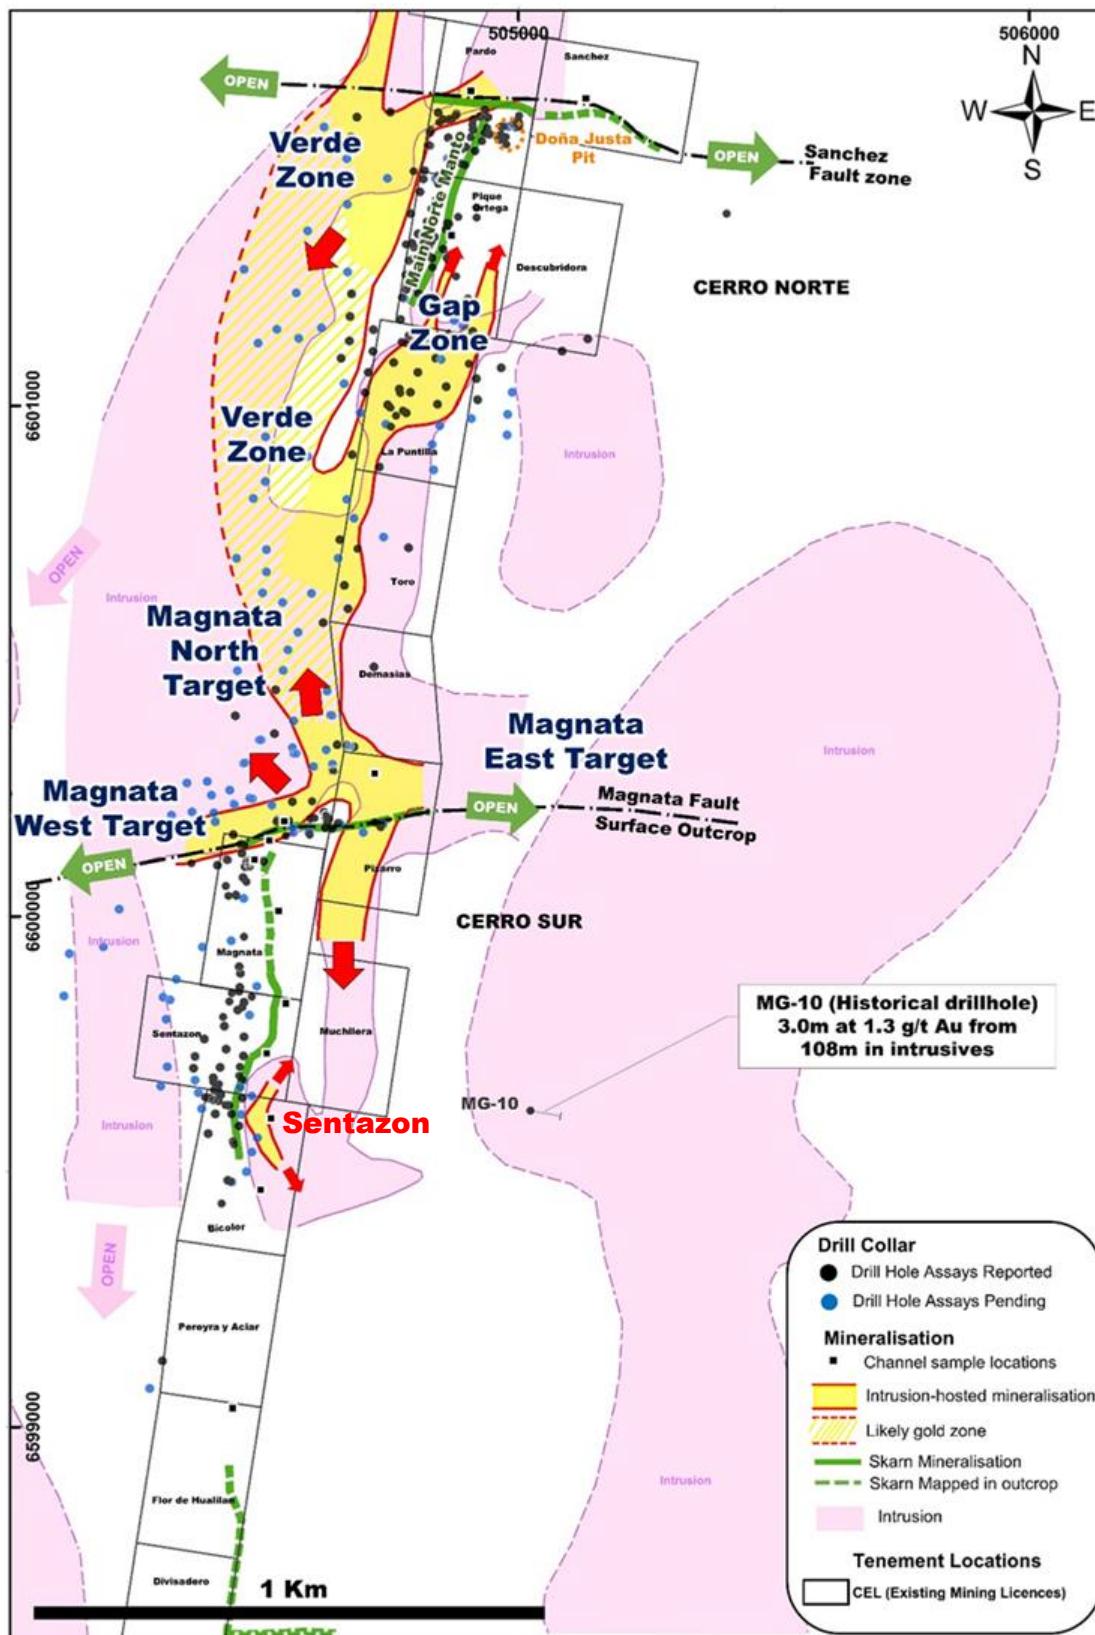

Figure 1 - Mineralisation at the Hualilan project showing Sentazon location

Challenger Exploration (ASX: CEL) ("CEL" the "Company") is pleased to announce results from the Company's flagship Hualilan Gold Project in San Juan, Argentina. The results are from the first 13 holes of the Company's follow up drill program at Sentazon which has now been expanded to 32 holes.

These early results contain a number of high-grade intersections such as **16.9 metres at 16.9 g/t AuEq** including two higher grade zones of **7.1 metres at 32.2 g/t AuEq** and **2.9 metres at 18.8 g/t AuEq** (GNDD-296) and **3.8 metres at 24.8 g/t AuEq** (GNDD-214). This drilling has doubled the dip extent of the high-grade mineralisation at Sentazon to 200 metres with mineralisation remaining open both up-dip into the Hualilan Hills and at depth.

The program confirmed the intercept in GNDD-142 as a significant new zone of high-grade gold mineralisation in the footwall below the existing high-grade mineralisation at Sentazon. Intercepts in intrusive such as **50.0 metres at 1.9g/t AuEq** including **2.4 metres at 17.3 g/t AuEq** (GNDD-253) demonstrate this new zone of footwall mineralisation below Sentazon has significant true width. In GNDD-253 the Footwall Zone has a true width of 93 metres, including a 17m zone of internal waste.

This new Footwall Zone of mineralisation has substantial down-dip extent, with a number of deeper drill holes in the program (assays pending) intercepting zones of massive sulphides in limestone containing pyrite-sphalerite-galena-pyrrhotite with garnet-silica-pyroxene (skarn) alteration up to 200 metres below the current results. This alteration style and mineral assemblage is consistent with other mineralised intervals in the limestone where high-grade gold results were received.

DISCUSSION OF RESULTS

Sentazon is the southernmost mineralisation that was defined historically with its location shown in Figure 1. Mineralisation at Sentazon was described historically as;

"Manto-style" high grade lenses, oriented parallel to the limestone beds, caused by the replacement of the limestone beds with massive sulphides. The Sentazon Manto is one of three en-echelon manto zones at Cerro Sur, over a strike interval of 330 metres, the others being Muchilera and Magnata both to the north. This mineralisation is lensoid in shape, trending northerly, dipping 40 to 70 degrees west with thickness of 1 to 4 metres ranging to 8 metres and open at depth."

Previous drilling by CEL intersected mineralisation over 150 metres of strike and 100 metres of dip at Sentazon with the mineralisation open along strike, at depth, and up-dip into the Hualilan Hills. Additionally, GNDD-142 had intersected a broad zone of high-grade mineralisation 50 metres below the Sentazon Manto returning an intercept of 40.0 metres at 6.2 g/t AuEq in limestones and intrusives.

To date the current round of drilling at Sentazon has completed 5,120 metres for 23 drill holes with further holes in progress and nine additional holes programmed. It was designed to test for:

- extensions to the Sentazon Manto along strike, up-dip, and down-dip of the existing mineralisation; and
- follow the GNDD-142 discovery to the east to determine if this was a new zone of mineralisation below the Sentazon Manto or a third potential east-west fault analogous to the Magnata Fault.

Section 230 (GNDD-296, GNDD-314, GNDD-362)

Cross Section 230 (Figure 2) shows the southern line of drilling in the follow up program at Sentazon. It contains GNDD-296 and deeper holes GNDD-314 and GNDD-362 for which assays are pending.

GNDD-296 intersected almost 30 metres of mineralisation including **10.0 metres at 1.0 g.t AuEq (0.4 g/t gold, 1.6 g/t silver, 1.2% zinc)** from 173m which is interpreted as the main Sentazon Manto mineralisation which was defined historically. The intercept in the main Sentazon Manto extended the mineralisation 60 metres down dip below GNDD-013 (7.0 metres at 2.7 g/t AuEq). It confirmed that earlier CEL drill hole GNDD-044 was not drilled deep enough to reach the main Sentazon Manto or the underlying footwall mineralisation.

GNDD-296 then intersected **16.9 metres at 16.9 g/t AuEq (14.1 g/t gold, 18.3 g/t silver, 5.8% zinc)** from 193.0m including **7.1 metres at 32.2 g/t AuEq (28.1 g/t gold, 36.1 g/t silver, 8.3% zinc)** and **2.9 metres at 18.8 g/t AuEq (13.1 g/t gold, 13.0g/t silver, 12.6% zinc)**. This deeper intercept correlates to the new zone of Footwall mineralisation at Sentazon. This intercept extends the new Footwall Zone 100 metres down-dip from GNDD-106 (25 metres at 0.7 g/t AuEq including 4.0 metres at 2.6 g/t AuEq) and 35 metres along strike from GNDD-142 (40.0 metres at 6.1 g/t AuEq). It demonstrates higher grades and confirms that several earlier holes were not drilled deep enough to intersect this new Footwall Zone at Sentazon. A new hole is planned to extend GNDD-013 deeper to reach the Footwall Zone.

GNDD-314 (assays pending) was collared 100 metres west of GNDD-296 to test 75 metres below GNDD-296. The hole intersected four 2-4 metre wide zones of massive sulphides and surrounding disseminated mineralisation with the shallowest zone at 115 metres and the deepest 297 metres downhole. The massive sulphide zones of mineralisation (Photo 1 – 297-300m GNDD-314) are logged as containing 20% pyrite-15% shalerite-30% pyrrhotite in strong garnet-silica-pyroxene alteration.

Following the strong mineralisation intersected in GNDD-314 a second hole GNDD-362 (assays pending) was collared to test 75 metres below GNDD-314. This hole intersected four 1-4 metre wide zones of massive sulphides with the shallowest zone at 239 metres downhole and the deepest zone from 425 to 427 metres downhole. These zones of mineralisation (Photo 2 – 425-427m GNDD-362) are logged as massive sulphides consisting of 10% pyrite-5% shalerite-20% pyrrhotite in strong garnet-silica-pyroxene alteration.

This skarn alteration and massive sulphide mineralisation intersected in GNDD-314 and GNDD-362 (both assays pending) is consistent with mineralised intervals in other drill holes for which high-grade gold assays have been received. These holes indicate that the newly discovered Footwall Zone of mineralisation has significant extent down-dip and remains strong and open at depth. This Footwall Zone dips more steeply than the historical limestone hosted manto mineralisation. Drilling to test the Footwall Zone deeper below GNDD-314 and GNDD-362 is programmed after assays have been received for both these drill holes.

Additionally, GNDD-296 intersected a third zone of lower grade mineralisation in shale overlying the limestone and at the shale/limestone contact intersecting **13.0 metres at 0.4 g/t AuEq** including 2.0

metres at 2.0 g/t AuEq. This is consistent with the zones of lower grade mineralisation seen above the main high-grade mineralisation throughout the Hualilan Gold Project.

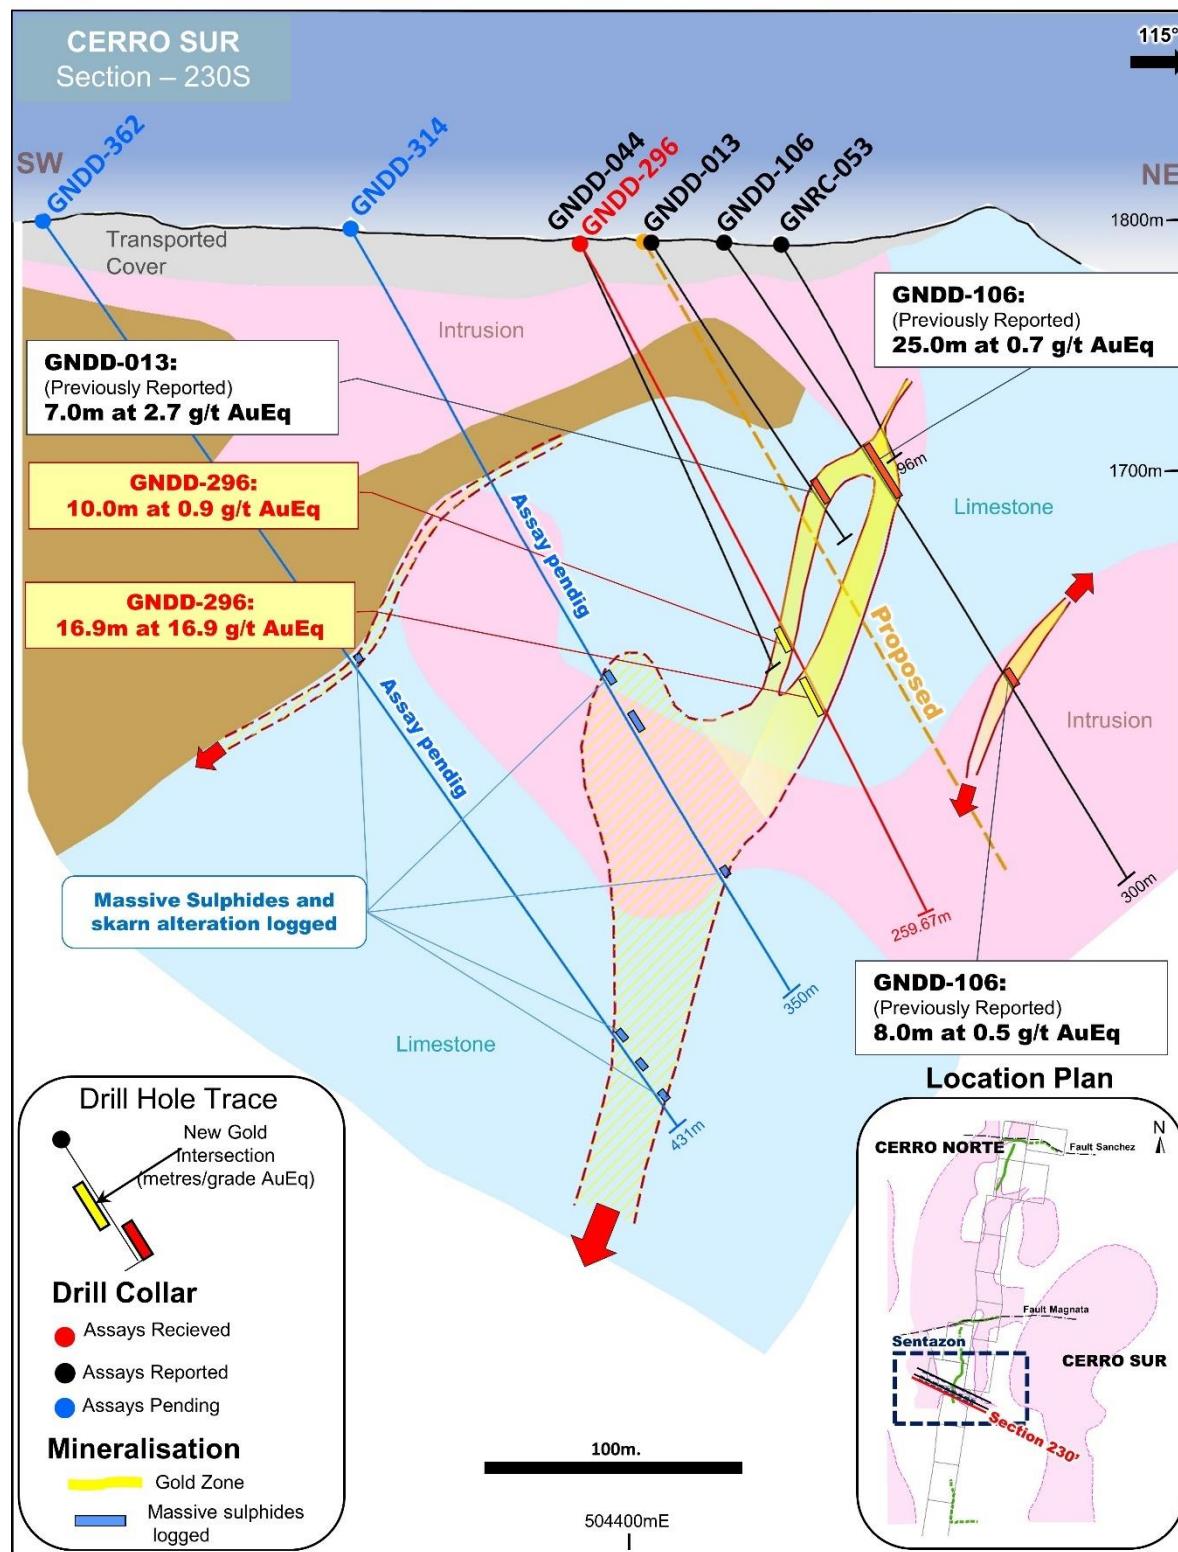

Figure 2 - Cross Section 230 showing GNDD-296, GNDD-314 and GNDD-362

Photo 1 - Footwall Zone mineralisation from 297-300 metres in GNDD-314 (assays pending)

Photo 2 - Footwall Zone mineralisation from 425-427 metres in GNDD-362 (assays pending)

Section 223 (GNDD-253, GNDD-205)

Section 223 (Figure 3) is located approximately 40 metres north of Section 230. Drillhole GNDD-253 on the section was drilled as an up-dip test of GNDD-142 which intersected 11.5 metres at 6.5 g/t AuEq in the main Sentazon Manto and was the discovery hole for the Footwall Zone at Sentazon.

GNDD-253 intersected **50.0 metres at 1.9g/t AuEq (1.8g/t gold, 1.0g/t silver, 0.1% zinc)** from 133.0m including a higher grade zone of **2.4 metres at 17.3 g/t AuEq (17.2 g/t gold, 3.76 g/t silver, 0.3% zinc)**. Additionally, the hole intersected more of the same style of mineralisation 17 metres deeper intersecting **25.1 metres at 0.9 g/t AuEq** including **3.6 metres at 2.4 g/t AuEq** and **2.0 metres at 3.4 g/t AuEq**. This extends the Footwall Zone of mineralisation 30 metres up-dip from GNDD-142 (40.0 metres at 6.1 g/t AuEq) and confirms that this new Footwall Zone has significant thickness with a true width greater than 90 metres, including a 17 metre zone of internal waste, intersected in GNDD-253.

In GNDD-253 the limestone which hosts the Sentazon Manto has been replaced by intrusion. The intrusion is localised on an east-west strike, possibly following a cross fault zone and does not extend to the section 50 metres to the north where the Sentazon manto extends up-dip. GNDD-253 did intersect **2.0 metres at 1.0 g/t AuEq (1.0 g/t gold, 1.1 g/t silver, 0.1% zinc)** below the level of the main Sentazon Manto. Two drill holes are planned to test for extensions to the Manto and the Footwall

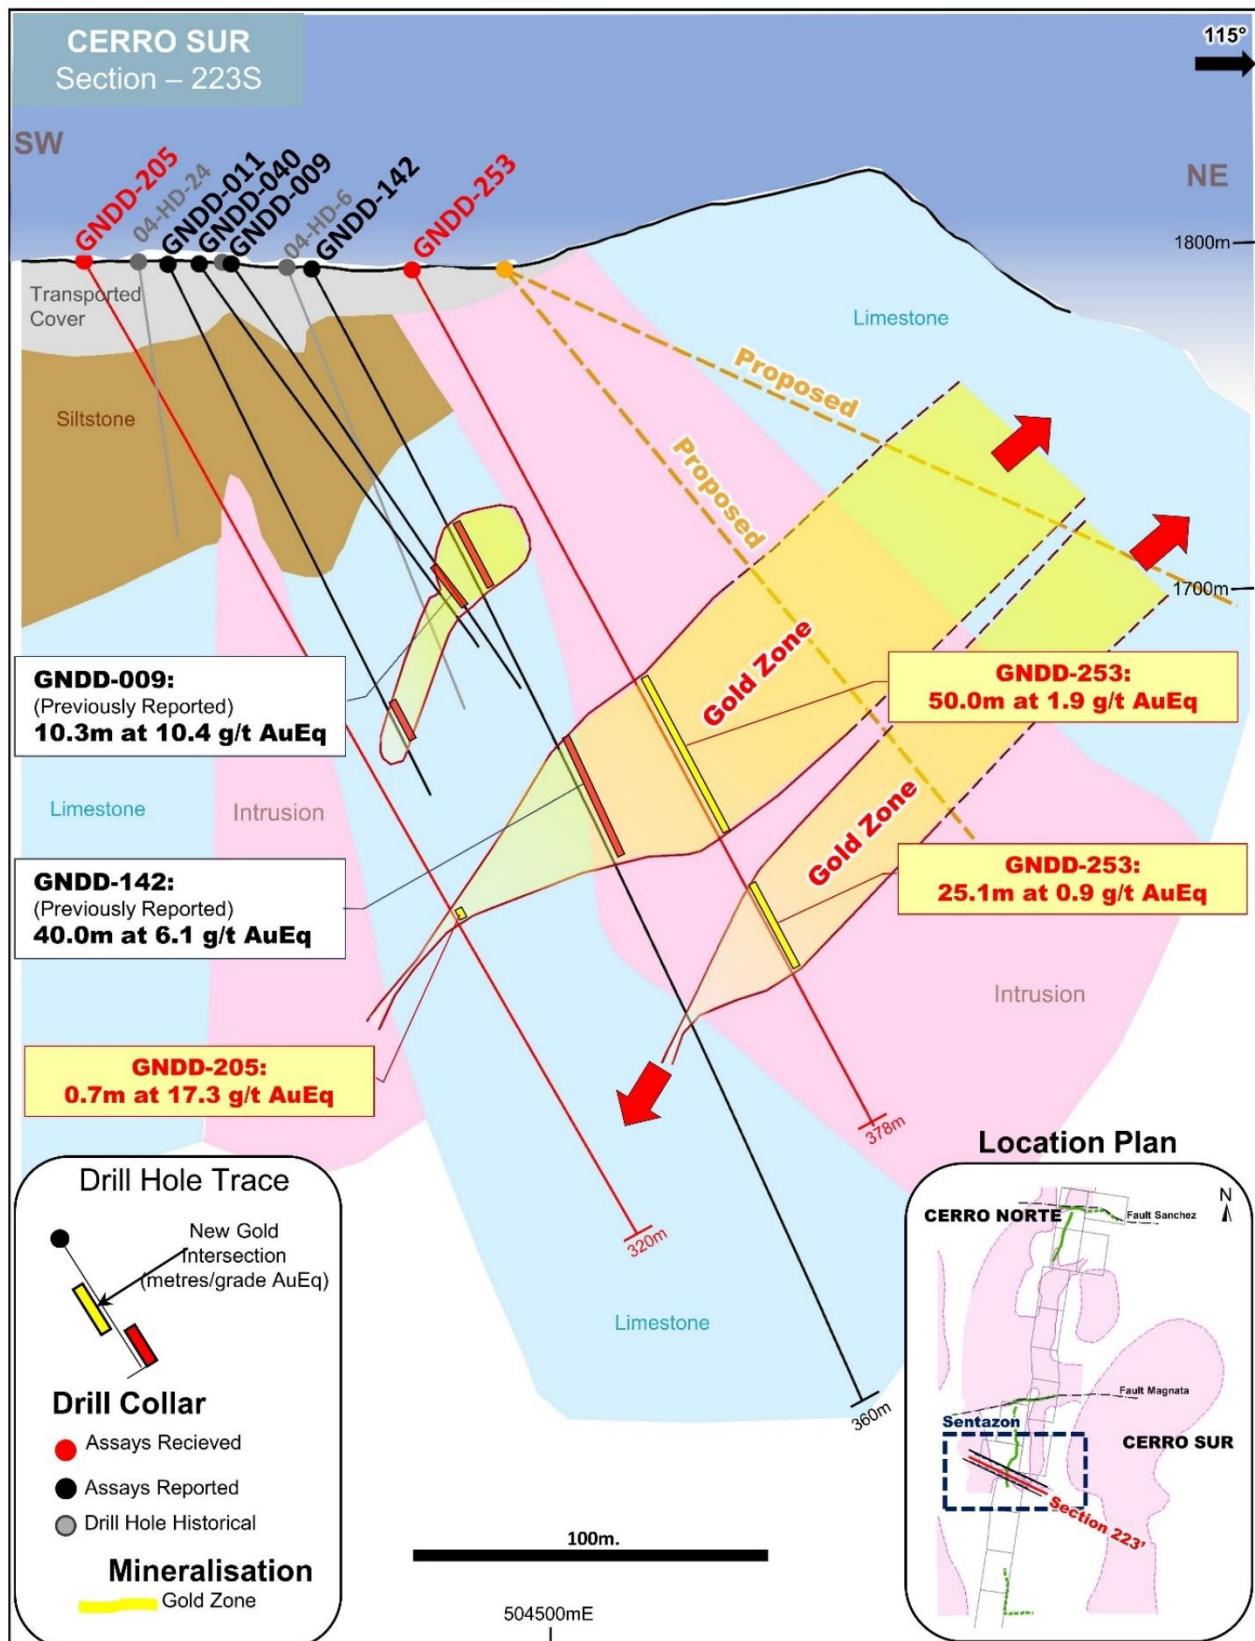

Figure 3 - Cross Section 230 showing GNDD-205, GNDD-253

Zone up-dip of GNDD-253 as shown in Figure 3.

GNDD-205 was drilled on the same section as a downdip test of GNDD-142. The hole intersected a high grade zone of **0.7m at 17.3 g/t AuEq (17.2 g/t gold, 3.76 g/t silver, 0.3% zinc)** which is believed to be the down-dip extension of the Footwall Zone. The company notes that GNDD-314 and GNDD-352 (both assays pending) collared off section north and south of GNDD-205, and designed to intersect the Footwall Zone approximately 75 metres downdip of GNDD-205, have both intersected multiple zones massive sulphides containing pyrite-sphalerite-galena-pyrrhotite with garnet-silica-pyroxene alteration indicating the Footwall Zone of mineralisation remains open at depth.

Section 221 (GNDD-209, GNDD-214, GNDD-239, GNDD-299, GNDD-352)

Section 221 (Figure 4) is located 40 metres north of Section 223. Drillholes GNDD-209, GNDD-239 and GNDD-214 were drilled as a series of 40 metre step-outs to test up-dip from CEL drill hole GNDD-016 which had intersected 11.5 metres at 5.9 g/t AuEq in the main Sentazon Manto. All holes intersected mineralisation with GNDD-214 intersecting **3.8 metres at 24.8/t AuEq (22.1 g/t gold, 125.3 g/t silver, 2.6% zinc)** from 48.3m. GNDD-209 intersected **17.1 metres at 2.6g/t AuEq (1.9g/t gold, 16.2g/t silver, 1.1% zinc)** from 65.0m and GNDD-239 intersected **2.4 metres at 2.6 g/t AuEq (1.9 g/t gold, 7.3 g/t silver, 1.5% zinc)**.

GNDD-299 is the deepest step-out to test the Sentazon Manto for which results have been received and intersected an encouraging **9.9 metres at 6.4 g/t AuEq (3.4 g/t gold, 44.0 g/t silver, 5.3% zinc)** from 147.5m. GNDD-299 extended the Sentazon Manto 30 metres down dip from GNDD-046 (2.9 metres at 40.8 g/t AuEq). This series of drill holes, and the channel sampling have extended the high-grade Sentazon Manto mineralisation to cover over 200 metres of dip extent on this section.

The only hole on this section that was drilled deep enough to intersect the Footwall Zone was GNDD-209 which intersected **2.0 metres at 1.3 g/t AuEq (1.0 g/t gold, 28.5 g/t silver, 0.0% zinc)** from 148.0 metres. Drill hole GNDD-352 (assays pending) was drilled off the same pad as GNDD-299 effectively as a re-drill of GNDD-299 deep enough to test the new Footwall Zone of mineralisation. GNDD-352 intersected sulphides and skarn alteration from 324 metres to 329.5 metres downhole including a 2 metre interval logged as massive sulphides containing 20% pyrite-20% shalerite-5% pyrrhotite in strong garnet-silica-pyroxene alteration (Photo 3). This has confirmed the extension of the new footwall zone almost 200 metres down-dip on this section with the Footwall Zone strong and open at depth.

In addition to extending the Manto and Footwall Zone most holes drilled on this section intersected mineralisation in the shales above the main zones of mineralisation. Results included **0.9m at 5.1 g/t AuEq** (GNDD-239) and **4.4 metres at 0.4 g/t AuEq** and **0.8 metres at 1.5 g/t AuEq** (GNDD-209).

Two deeper holes are programmed as 75 and 150 metre down-dip step-outs below GNDD-299 and GNDD-352 (Figure 4). Additionally, drill hole GNDD-302 which was collared to test 250 metres down dip of GNDD-352 was not drilled deep enough to intersect the projected Manto and Footwall zones. GNDD-302 will likely be extended as deep test of the Sentazon mineralisation once assay results for GNDD-352 and GNDD-306 and GNDD-316 (see next section of this ASX release) have been received.

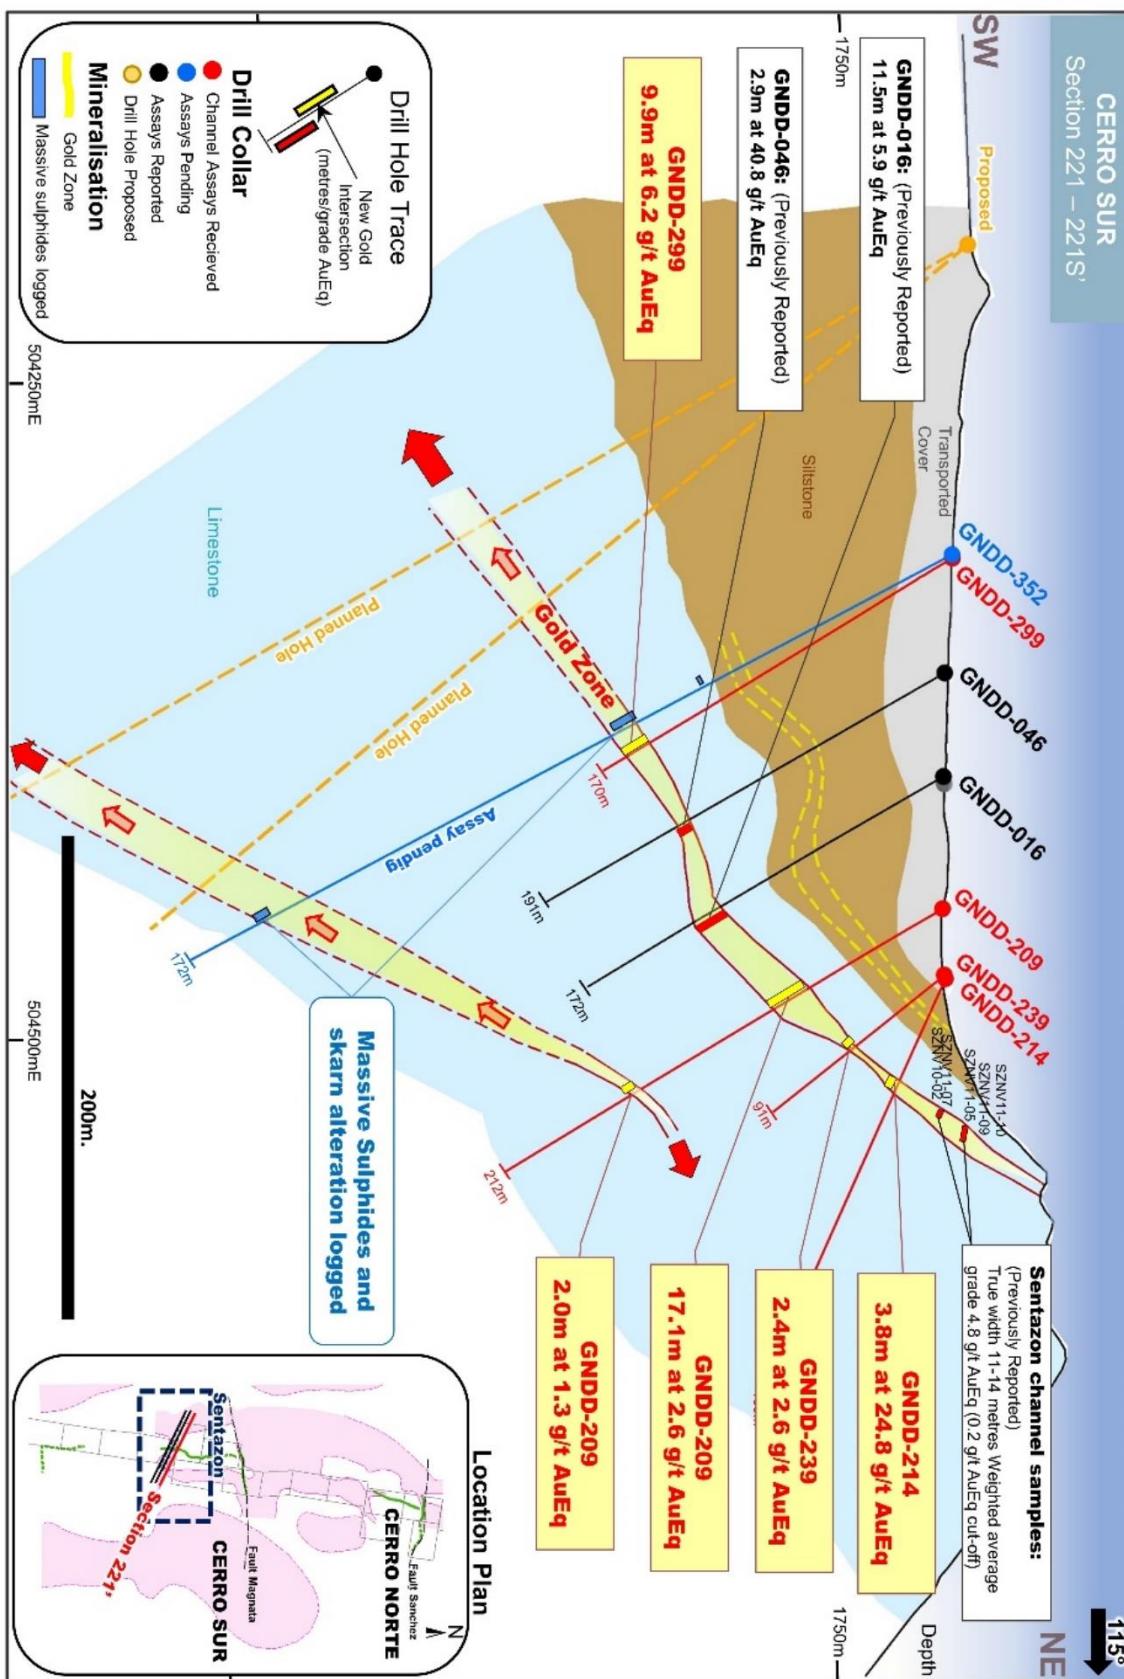

Figure 4 - Cross Section 230 showing GNDD-205, GNDD-253

Photo 3 - Close up of the Footwall Zone mineralisation from 324-326 metres in GNDD-352 (assays pending)

Photo 4 - Intersection of the Sentazon Manto from 142-155 metres downhole in GNDD-352 (assays pending)

North Sentazon (GNDD-201, GNDD-232, GNDD-246 and GNDD-250)

GNDD-201, GNDD-232, GNDD-246 and GNDD-250 were drilled 100 to 150 metres downdip of earlier CEL drilling at the north of Sentazon. The earlier CEL drillholes had intercepted relatively thin zones of mineralisation typified by holes such as GNRC-056 (1 metre at 4.1 g/t AuEq) and GNDD-074 (2 metres at 1.4 g/t AuEq and 2 metres at 1.1 g/t AuEq).

The current drillholes downdip have generally intercepted higher tenor mineralisation with results including **2.5 metres at 5.9 g/t AuEq (4.5 g/t gold, 9.0 g/t silver, 2.5% zinc)** including **0.9 metres at 16.4 g/t AuEq (12.7 g/t gold, 25.0 g/t silver, 7.8% zinc)** in GNDD-246. And **2.5 metres at 1.1 g/t AuEq (0.7 g/t gold, 15.2 g/t silver, 0.6% zinc)** plus **4.0 metres at 2.5 g/t AuEq (1.7 g/t gold, 45.3 g/t silver, 0.2% zinc)** including **2 metres at 4.0 g/t AuEq (2.9 g/t gold, 71.1 g/t silver, 0.4% zinc)** in GNDD-232.

The mineralisation appears to be increasing in width down dip with a zone of disseminated mineralisation developing around the higher-grade mineralisation. For example, GNDD-250 **intercepted 5.0 metres at 1.3 g/t AuEq (0.9 g/t gold, 9.2 g/t silver, 0.6% zinc)** within halo of lower-grade mineralisation of **30 metres at 0.4 g/t AuEq** from 80.0m.

Due to the general increasing tenor of the mineralisation down-dip two deeper drill holes GNDD-306 and GNDD-316 (both assays pending) were collared to test the mineralisation intersected in GNDD-246, GNDD-232 and GNDD-250 approximately 200 metres down dip. Both GND-306 and GNDD-316 are logged as having intersected weak to moderate skarn alteration and disseminated sulphides at the prognosed depth extension of the mineralisation in the up-dip drilling. Results for GNDD-306 and GNDD-316 are pending with additional follow-up holes contingent on results.

See over the page for information regarding AuEq's reported under the JORC Code.

² Gold Equivalent (AuEq) values - Requirements under the JORC Code

- Assumed commodity prices for the calculation of AuEq is Au US\$1780 Oz, Ag US\$24 Oz, Zn US\$2,800 /t
 - Metallurgical recoveries for Au, Ag and Zn are estimated to be 89%, 84% and 79% respectively (see **JORC Table 1 Section 3 Metallurgical assumptions**) based on metallurgical test work.
 - The formula used: AuEq (g/t) = Au (g/t) + [Ag (g/t) x (24/1780) x (0.84/0.89)] + [Zn (%) x (28.00*31.1/1780) x (0.79/0.89)]
 - *CEL confirms that it is the Company's opinion that all the elements included in the metal equivalents calculation have a reasonable potential to be recovered and sold.*
-

About Challenger Exploration

Challenger Exploration Limited's (ASX: CEL) aspiration is to become a globally significant gold producer. The Company is developing two complementary gold/copper projects in South America. The strategy for the 100% owned Hualilan Gold project is for it to provide a high-grade low capex operation in the near term. This underpins CEL with a low risk, high margin source of cashflow while it prepares for a much larger bulk gold operation at both Hualilan and El Guaybo in Ecuador.

The Company is fully funded for the next 2 years with cash at bank of \$45 million and it has committed to a 9-rig 120,000 metre drill program at its Flagship Hualilan Gold project.

1. **Hualilan Gold Project**, located in San Juan Province Argentina, is a near term development opportunity. It has extensive historical drilling with over 150 drill-holes and a non-JORC historical resource ⁽¹⁾ of 627,000 Oz @ 13.7 g/t gold which remains open in most directions. The project was locked up in a dispute for the past 15 years and as a consequence had seen no modern exploration until CEL acquired the project in 2019. In the past 2 years CEL has completed 350 drill holes for more than 75,000 metres of drilling. Results have included **6.1m @ 34.6 g/t Au, 21.9 g/t Ag, 2.9% Zn, 6.7m @ 14.3 g/t Au, 140 g/t Ag, 7.3% Zn and 10.3m @ 10.4 g/t Au, 28 g/t Ag, 4.6% Zn**. This drilling intersected high-grade gold over almost 2 kilometres of strike and extended the known mineralisation along strike and at depth in multiple locations. Recent drilling has demonstrated this high-grade skarn mineralisation is underlain by a significant intrusion-hosted gold system with intercepts including **209.0m at 1.0 g/t Au, 1.4 g/t Ag, 0.1% Zn and 110.5m at 2.5 g/t Au, 7.4 g/t Au, 0.90% Zn** in intrusives. CEL's current program which is fully funded includes a 120,000 metres of drilling, metallurgical test work of key ore types, and an initial JORC Compliant Resource and PFS.
2. **El Guayabo Gold/Copper Project** covers 35 sq kms in southern Ecuador and was last drilled by Newmont Mining in 1995 and 1997 targeting gold in hydrothermal breccias. Historical drilling has demonstrated potential to host significant gold and associated copper and silver mineralisation. Historical drilling has returned a number of intersections including **156m @ 2.6 g/t Au, 9.7 g/t Ag, 0.2% Cu and 112m @ 0.6 % Cu, 0.7 g/t Au, 14.7 g/t Ag** which have never been followed up. The Project has multiple targets including breccia hosted mineralisation, an extensive flat lying late-stage vein system and an underlying porphyry system target neither of which has been drill tested. CEL's first results confirm the discovery of large-scale gold system with over 250 metres of bulk gold mineralisation encountered in drill hole ZK-02 which contains a significant high-grade core of 134m at 1.0 g/t gold and 4.1 g/t silver including 63m at 1.6 g/t gold and 5.1 g/t silver.

Foreign Resource Estimate Hualilan Project

Rounding errors may be present. Troy ounces (oz) tabled here

#¹ For details of the foreign non-JORC compliant resource and to ensure compliance with LR 5.12 please refer to the Company's ASX Release dated 25 February 2019. These estimates are foreign estimates and not reported in accordance with the JORC Code. A competent person has not done sufficient work to clarify the foreign estimates as a mineral resource in accordance with the JORC Code. It is uncertain that following evaluation and/or further exploration work that the foreign estimate will be able to be reported as a mineral resource. The company is not in possession of any new information or data relating to the foreign estimates that materially impact on the reliability of the estimates that materially impacts on the reliability of the estimates or CEL's ability to verify the foreign estimates estimate as minimal resources in accordance with Appendix 5A (JORC Code). The company confirms that the supporting information provided in the initial market announcement on February 25, 2019 continues to apply and is not materially changed.

Competent Person Statement – Exploration results

The information that relates to sampling techniques and data, exploration results and geological interpretation has been compiled Dr Stuart Munroe , BSc (Hons), PhD (Structural Geology), GDip (AppFin&Inv) who is a full-time employee of the Company. Dr Munroe is a Member of the AusIMM. Dr Munroe has over 20 years' experience in the mining and metals industry and qualifies as a Competent Person as defined in the JORC Code (2012).

Dr Munroe has sufficient experience of relevance to the styles of mineralisation and the types of deposits under consideration, and to the activities undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results. Dr Munroe consents to the inclusion in this report of the matters based on information in the form and context in which it appears. The Australian Securities Exchange has not reviewed and does not accept responsibility for the accuracy or adequacy of this release.

Competent Person Statement – Foreign Resource Estimate

The information in this release provided under ASX Listing Rules 5.12.2 to 5.12.7 is an accurate representation of the available data and studies for the material mining project. The information that relates to Mineral Resources has been compiled by Dr Stuart Munroe , BSc (Hons), PhD (Structural Geology), GDip (AppFin&Inv) who is a full-time employee of the Company. Dr Munroe is a Member of the AusIMM. Dr Munroe has over 20 years' experience in the mining and metals industry and qualifies as a Competent Person as defined in the JORC Code (2012).

Dr Munroe and has sufficient experience which is relevant to the style of mineralisation and type of deposits under consideration to qualify as Competent Person as defined in the 2012 Edition of the JORC Code for Reporting of, Mineral Resources and Ore Reserves. Dr Munroe consents to the inclusion in this report of the matters based on information in the form and context in which it appears. The Australian Securities Exchange has not reviewed and does not accept responsibility for the accuracy or adequacy of this release.

JORC Code, 2012 Edition – Table 1 report template

Section 1 Sampling Techniques and Data -Hualilan Project

(Criteria in this section apply to all succeeding sections.)

| Criteria | JORC Code explanation | Commentary |
|----------------------------|--|--|
| Sampling techniques | <ul style="list-style-type: none"> - <i>Nature and quality of sampling (eg cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as down hole gamma sondes, or handheld XRF instruments, etc). These examples should not be taken as limiting the broad meaning of sampling.</i> - <i>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</i> - <i>Aspects of the determination of mineralisation that are Material to the Public Report.</i> - <i>In cases where 'industry standard' work has been done this would be relatively simple (eg 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (eg submarine nodules) may warrant disclosure of detailed information.</i> | <p>For historic exploration data, there is little information provided by previous explorers to detail sampling techniques. Drill core was cut with a diamond saw longitudinally and one half submitted for assay. Assay was generally done for Au. In some drill campaigns, Ag and Zn were also analysed. There is limited multielement data available. No information is available for RC drill techniques and sampling.</p> <p>For CEL drilling, diamond core (HQ3) was cut longitudinally on site using a diamond saw. Samples lengths are from 0.5m to 2.0m in length (average 1m), taken according to lithology, alteration, and mineralization contacts.</p> <p>For CEL reverse circulation (RC) drilling, 2-4 kg sub-samples from each 1m drilled are collected from a face sample recovery cyclone mounted on the drill machine.</p> <p>CEL channel samples are cut into underground or surface outcrop using a hand-held diamond edged cutting tool. Parallel saw cuts 3-5cm apart are cut 2-4cm deep into the rock which allows for the extraction of a representative sample using hammer and chisel. The sample is collected onto a plastic mat and collected into a sample bag.</p> <p>Core and channel samples were crushed to approximately 85% passing 2mm. A 500g or a 1 kg sub-sample was taken and pulverized to 85% passing 75µm. A 50g charge was analysed for Au by fire assay with AA determination. Where the fire assay grade is > 10 g/t gold, a 50g charge was analysed for Au by Fire assay with gravimetric determination.</p> <p>A 10g charge was analysed for at least 48 elements by 4-acid digest and ICP-MS determination. Elements determined were Ag, As, Ba, Be, Bi, Ca, Ce, Co, Cr, Cs, Cu, Fe, Ga, Ge, Hf, In, K, La, Li, Mg, Mn, Mo, Na, Nb, Ni, P, Pb, Rb, Re, S, Sb Sc, Se, Sn, Sr, Ta, Te, Th, Ti, Tl, U, V, W, Y, Zn and Zr.</p> <p>Ag > 100 g/t, Zn, Pb and Cu > 10,000 ppm and S > 10% were re-analysed by the same method using a different calibration.</p> <p>Sample intervals were selected according to geological boundaries. There was no coarse or visible gold observed in any of the core or channel samples.</p> |

| Criteria | JORC Code explanation | Commentary | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
|----------------------------|--|--|-----------|-------------------|-------------|-----------|-------------------|-------------|---------|-----------|------|------|----|-----------|-----------|--------|-----|-----|------|--------|------|----|-----------|-----------|--------|-----|-----|------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|------|--------|------|----|-----------|-----------|--------|-----|-----|------|--------|---------|------|----------|-----------|-------------------|-------------|---------|-----------|------|------|----|-----------|-----------|--------|-----|-----|------|--------|-------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|-----|-----|-------|--------|------|----|-----------|-----------|--------|----|-----|------|--------|------|----|-----------|-----------|--------|-----|-----|------|--------|------|----|-----------|-----------|--------|-----|-----|------|--------|------|----|-----------|-----------|--------|----|-----|------|--------|------|----|-----------|-----------|--------|---|-----|-------|--------|
| Drilling techniques | <ul style="list-style-type: none"> - Drill type (eg core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc) and details (eg core diameter, triple or standard tube, depth of diamond tails, face-sampling bit, or other type, whether core is oriented and if so, by what method, etc). | <p>Collar details for diamond core drilling (DD) and reverse circulation (RC) historic drilling campaigns is provided below from archival data cross checked with drill logs and available plans and sections where available. Collars shown below are in WGS84, zone 19s which is the standard projection used by CEL for the Project. Collar locations have been check surveyed using differential GPS (DGPS) by CEL to verify if the site coincides with a marked collar or tagged drill site. In most cases the drill collars coincide with historic drill site, some of which (but not all) are tagged. The collar check surveys were reported in POSGAR (2007) projection and converted to WGS84.</p> <table border="1"> <thead> <tr> <th>Hole_id</th><th>Type</th><th>East (m)</th><th>North | <p>CEL drilling of HQ3 core (triple tube) was done using various truck and track mounted drill machines that are operated by various Argentinian drilling companies based in Mendoza and San Juan. The core has not been oriented as the rock is commonly too broken to allow accurate core orientation.</p> <p>CEL drilling of reverse circulation (RC) drill holes was done using a track-mounted LM650 universal drill rig set up for reverse circulation drilling. Drilling is being done using a 5.25 inch hammer bit.</p> <p>Collar details for DD drill holes and RC drill holes completed by CEL are shown below in WGS84, zone 19s projection. Collar locations for drill holes to GNDD282 are surveyed using DGPS. Collar location from GNDD285 are surveyed with a handheld GPS to be followed up with DGPS.</p> | | | | | | | | | | | | | | | | | |

|---|---|--|
| Sub-sampling techniques and sample preparation | <ul style="list-style-type: none"> - If core whether cut or sawn and whether quarter half or all core taken. - If non-core whether riffled tube sampled rotary split etc and whether sampled wet or dry. - For all sample types the nature quality and appropriateness of the sample preparation technique. - Quality control procedures adopted for all sub-sampling stages to maximise representivity of samples. - Measures taken to ensure that the sampling is representative of the in-situ material collected including for instance results for field duplicate/second-half sampling. - Whether sample sizes are appropriate to the grain size of the material being sampled. | <p>Competent drill core is cut longitudinally using a diamond saw for sampling of $\frac{1}{2}$ the core. Soft core is split using a wide blade chisel or a manual core split press. The geologist logging the core indicates on the drill core where the saw cut is to be made to ensure half-core sample representivity.</p> <p>Sample intervals are selected based on lithology alteration and mineralization boundaries. Sample lengths average 1.38m. No second-half core samples have been submitted. The second half of the core samples has been retained in the core trays for future reference.</p> <p>From hole GNDD073, duplicate diamond core samples have been collected for every 25-30m drilled. The duplicate diamond core samples are $\frac{1}{4}$ core samples. Duplicate core sample results and correlation plots (log scale for Au, Ag and Zn) are shown below:</p> |

| | n | RSQ | mean | | median | | variance | |
|----------|-----|-------|----------|-----------|----------|-----------|----------|-----------|
| | | | original | duplicate | original | duplicate | original | duplicate |
| Au (ppm) | 971 | 0.977 | 0.149 | 0.150 | 0.009 | 0.009 | 2.215 | 2.835 |
| Ag (ppm) | 971 | 0.709 | 0.79 | 0.69 | 0.21 | 0.19 | 13.15 | 7.15 |
| Cd (ppm) | 971 | 0.984 | 3.04 | 2.73 | 0.16 | 0.15 | 520.20 | 463.80 |
| Cu (ppm) | 971 | 0.393 | 19.65 | 16.00 | 3.60 | 3.40 | 1.3E+04 | 5.4E+03 |
| Fe (%) | 971 | 0.978 | 1.585 | 1.567 | 1.620 | 1.620 | 2.9 | 2.8 |
| Pb (ppm) | 971 | 0.971 | 114.7 | 112.9 | 15.7 | 15.1 | 5.7E+05 | 7.6E+05 |
| S (%) | 971 | 0.983 | 0.357 | 0.348 | 0.110 | 0.110 | 0.889 | 0.832 |
| Zn (ppm) | 971 | 0.979 | 508 | 472 | 85 | 80 | 1.3.E+07 | 1.2.E+07 |

n=count

RSQ = R squared

The correlation for Cu is poor because of 1 pair, where Cu results vary significantly. Removing this outlier provides at RSQ for Cu of 0.945

| | |  <p>The figure consists of three separate scatter plots arranged horizontally. Each plot shows the relationship between 'Original' values (x-axis) and 'Duplicate' values (y-axis). The left plot is for Gold (Au), the middle for Silver (Ag), and the right for Zinc (Zn). All three plots use a logarithmic scale for both axes, ranging from approximately 0.001 to 100 or 100,000. In all cases, the duplicate samples show a strong positive linear correlation with the original samples, indicating high consistency in the duplicate measurements.</p> <p>RC sub-samples over 1m intervals are collected at the drill site from a cyclone mounted on the drill rig. A duplicate RC sample is collected for every 25-30m drilled.</p> <p>The duplicate RC sample results and correlation plots (log scale for Au, Ag and Zn) are shown below:</p> <table border="1" data-bbox="929 710 1949 1096"> <thead> <tr> <th></th> <th>n</th> <th>RSQ</th> <th>mean original</th> <th>mean duplicate</th> <th>median original</th> <th>median duplicate</th> <th>variance original</th> <th>variance duplicate</th> </tr> </thead> <tbody> <tr> <td>Au (ppm)</td> <td>85</td> <td>0.799</td> <td>0.101</td> <td>0.140</td> <td>0.017</td> <td>0.016</td> <td>0.041</td> <td>0.115</td> </tr> <tr> <td>Ag (ppm)</td> <td>85</td> <td>0.691</td> <td>1.74</td> <td>2.43</td> <td>0.59</td> <td>0.58</td> <td>13.59</td> <td>64.29</td> </tr> <tr> <td>Cd (ppm)</td> <td>85</td> <td>0.989</td> <td>15.51</td> <td>16.34</td> <td>0.41</td> <td>0.44</td> <td>4189</td> <td>4737</td> </tr> <tr> <td>Cu (ppm)</td> <td>85</td> <td>0.975</td> <td>47.74</td> <td>53.86</td> <td>5.80</td> <td>5.70</td> <td>2.4E+04</td> <td>3.1E+04</td> </tr> <tr> <td>Fe (%)</td> <td>85</td> <td>0.997</td> <td>1.470</td> <td>1.503</td> <td>0.450</td> <td>0.410</td> <td>7.6</td> <td>7.6</td> </tr> <tr> <td>Pb (ppm)</td> <td>85</td> <td>0.887</td> <td>296.0</td> <td>350.6</td> <td>26.3</td> <td>32.4</td> <td>6.0E+05</td> <td>7.4E+05</td> </tr> <tr> <td>S (%)</td> <td>85</td> <td>0.972</td> <td>0.113</td> <td>0.126</td> <td>0.020</td> <td>0.020</td> <td>0.046</td> <td>0.062</td> </tr> <tr> <td>Zn (ppm)</td> <td>85</td> <td>0.977</td> <td>3399</td> <td>3234</td> <td>158</td> <td>177</td> <td>2.5.E+08</td> <td>2.1.E+08</td> </tr> </tbody> </table> <p>n=count RSQ = R squared</p> | | n | RSQ | mean original | mean duplicate | median original | median duplicate | variance original | variance duplicate | Au (ppm) | 85 | 0.799 | 0.101 | 0.140 | 0.017 | 0.016 | 0.041 | 0.115 | Ag (ppm) | 85 | 0.691 | 1.74 | 2.43 | 0.59 | 0.58 | 13.59 | 64.29 | Cd (ppm) | 85 | 0.989 | 15.51 | 16.34 | 0.41 | 0.44 | 4189 | 4737 | Cu (ppm) | 85 | 0.975 | 47.74 | 53.86 | 5.80 | 5.70 | 2.4E+04 | 3.1E+04 | Fe (%) | 85 | 0.997 | 1.470 | 1.503 | 0.450 | 0.410 | 7.6 | 7.6 | Pb (ppm) | 85 | 0.887 | 296.0 | 350.6 | 26.3 | 32.4 | 6.0E+05 | 7.4E+05 | S (%) | 85 | 0.972 | 0.113 | 0.126 | 0.020 | 0.020 | 0.046 | 0.062 | Zn (ppm) | 85 | 0.977 | 3399 | 3234 | 158 | 177 | 2.5.E+08 | 2.1.E+08 |

| Criteria | JORC Code explanation | Commentary |
|--|---|--|
| Verification of sampling and assaying | <ul style="list-style-type: none"> - The verification of significant intersections by either independent or alternative company personnel. - The use of twinned holes. - Documentation of primary data entry procedures data verification data storage (physical and electronic) protocols. - Discuss any adjustment to assay data. | <p>Repeat sampling of 186 coarse reject samples from 2019 drilling has been done to verify sampling. Original samples were from the 2019 DD drilling which were analysed by MSA (San Juan preparation and Vancouver analysis). Repeat samples were analysed by ALS (Mendoza preparation and Vancouver analysis). The repeat analysis technique was identical to the original. The repeat analyses correlate very closely with the original analyses providing a high confidence in the sample preparation and analysis from MSA and ALS. A summary of the results for the 186 sample pairs for key elements is provided below:</p> |

| Criteria | JORC Code explanation | Commentary |
|--|--|--|
| | <ul style="list-style-type: none"> - <i>used.</i> - <i>Quality and adequacy of topographic control.</i> | <p>The drill machine is set-up on the drill pad using hand-held equipment according to the proposed hole design.</p> <p>Diamond core drill holes are surveyed at 30-40m intervals down hole using a Reflex tool. RC drill holes are surveyed down hole every 10 metres using a gyroscope to avoid magnetic influence from the drill rods.</p> <p>All current and previous drill collar sites, Minas corner pegs and strategic surface points have been surveyed using DGPS to provide topographic control for the Project.</p> |
| Data spacing and distribution | <ul style="list-style-type: none"> - <i>Data spacing for reporting of Exploration Results.</i> - <i>Whether the data spacing and distribution is sufficient to establish the degree of geological and grade continuity appropriate for the Mineral Resource and Ore Reserve estimation procedure(s) and classifications applied.</i> - <i>Whether sample compositing has been applied.</i> | <p>No regular drill hole spacing has been applied across the Project, although a nominal 40m x 40m drill spacing is being applied to infill and extension drilling where appropriate. The current drilling is designed to check previous exploration, extend mineralisation along strike, and provide some information to establish controls on mineralization and exploration potential. No Mineral Resource Estimate to JORC 2012 reporting standards has been made at this time.</p> <p>Samples have not been composited.</p> |
| Orientation of data in relation to geological structure | <ul style="list-style-type: none"> - <i>Whether the orientation of sampling achieves unbiased sampling of possible structures and the extent to which this is known considering the deposit type.</i> - <i>If the relationship between the drilling orientation and the orientation of key mineralised structures is considered to have introduced a sampling bias this should be assessed and reported if material.</i> | <p>As far as is currently understood and where practicable, the orientation of sampling achieves unbiased sampling of structures and geology controlling the mineralisation.</p> <p>For underground channel sampling, the orientation of the sample is determined by the orientation of the workings. Where the sampling is parallel with the strike of the mineralisation, plans showing the location of the sampling relative to the orientation of the mineralisation, weighted average grades and estimates of true thickness are provided to provide a balanced report of the mineralisation that has been sampled.</p> <p>Drilling has been designed to provide an unbiased sample of the geology and mineralisation targeted.</p> |
| Sample security | <ul style="list-style-type: none"> - <i>The measures taken to ensure sample security.</i> | <p>Samples were under constant supervision by site security, senior personnel, and courier contractors prior to delivery to the preparation laboratories in San Juan and Mendoza.</p> |
| Audits or reviews | <ul style="list-style-type: none"> - <i>The results of any audits or reviews of sampling techniques and data.</i> | <p>There has not yet been any independent reviews of the sampling techniques and data.</p> |

| | | <ul style="list-style-type: none"> - 2003 – 2005 – La Mancha (TSE Listed) undertook 7447m of DDH core drilling (HD-01 to HD-48) - Detailed resource estimation studies were undertaken by EPROM Ltda. (EPROM) in 1996 and CMEC (1999 revised 2000) both of which were written to professional standards and La Mancha 2003 and 2006. - The collection of all exploration data by the various operators was of a high standard and had appropriate sampling techniques intervals and custody procedures were used. | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Geology | <ul style="list-style-type: none"> - Deposit type geological setting and style of mineralisation. | <p>Mineralisation occurs in all rock types where it preferentially replaces limestone, shale and sandstone and occurs in fault zones and in fracture networks within dacitic intrusions.</p> <p>The mineralisation has previously been classified as a Zn-Cu distal skarn (or manto-style skarn) with vein-hosted Au-Ag mineralisation. It has been divided into three phases – prograde skarn retrograde skarn and a late quartz-galena event the evolution of the hydrothermal system and mineral paragenesis is the subject of more detailed geometallurgical work.</p> <p>Gold occurs in native form and as inclusions with sulphide and pyroxene. The mineralisation also commonly contains pyrite, chalcopyrite sphalerite and galena with rare arsenopyrite, pyrrhotite and magnetite.</p> <p>Mineralisation is either parallel to bedding in bedding-parallel faults, in veins or breccia matrix within fractured dacitic intrusions, at lithology contacts or in east-west striking steeply dipping siliceous faults that cross the bedding at a high angle. The faults have thicknesses of 1–4 m and contain abundant sulphides. The intersection between the bedding-parallel mineralisation and east-striking cross veins seems to be important in localising the mineralisation.</p> | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | | |
| Drill hole Information | <ul style="list-style-type: none"> - A summary of all information material to the understanding of the exploration results including a tabulation of the following information for all Material drill holes: - easting and northing of the drill hole collar - elevation or RL (Reduced Level – elevation above sea level in metres) of the drill hole collar - dip and azimuth of the hole - down hole length and interception depth - hole length. - If the exclusion of this information is justified on the basis that the information is not Material and this exclusion does not detract from the | <p>The following significant intersections have been reported by previous explorers. A cut-off grade of 1 g/t Au equivalent has been used with up to 2m of internal dilution or a cut-off grade of 0.2 g/t Au equivalent and up to 4m of internal dilution has been allowed. No metallurgical or recovery factors have been used. Drill collar location is provided in the previous section.</p> <table border="1" data-bbox="1006 885 1814 1296"> <thead> <tr> <th>Hole_id</th> <th>From (m)</th> <th>Interval (m)</th> <th>Au (g/t)</th> <th>Ag (g/t)</th> <th>Zn (%)</th> </tr> </thead> <tbody> <tr> <td>AG16</td> <td>38.6</td> <td>1.2</td> <td>0.1</td> <td>28.6</td> <td>1.7</td> </tr> <tr> <td>MG10</td> <td>108.0</td> <td>3.0</td> <td>1.3</td> <td>No assay</td> <td>No assay</td> </tr> <tr> <td>DDH36</td> <td>24.7</td> <td>9.3</td> <td>1.6</td> <td>46.3</td> <td>1.2</td> </tr> <tr> <td>DDH53</td> <td>17.3</td> <td>1.4</td> <td>1.0</td> <td>1.7</td> <td>0.00</td> </tr> <tr> <td>DDH53</td> <td>24.0</td> <td>8.9</td> <td>3.7</td> <td>239.5</td> <td>0.03</td> </tr> <tr> <td>DDH53</td> <td>35.7</td> <td>3.9</td> <td>3.9</td> <td>87.8</td> <td>0.06</td> </tr> <tr> <td>DDH53</td> <td>41.0</td> <td>3.0</td> <td>2.6</td> <td>7.6</td> <td>0.20</td> </tr> <tr> <td>DDH54</td> <td>20.0</td> <td>1.1</td> <td>1.2</td> <td>0.7</td> <td>0.00</td> </tr> <tr> <td>DDH54</td> <td>31.1</td> <td>8.3</td> <td>3.9</td> <td>32.1</td> <td>0.80</td> </tr> <tr> <td>DDH65</td> <td>62.0</td> <td>8.2</td> <td>11.0</td> <td>60.6</td> <td>1.2</td> </tr> <tr> <td>DDH65</td> <td>82.0</td> <td>1.0</td> <td>1.8</td> <td>33.4</td> <td>0.30</td> </tr> <tr> <td>DDH66</td> <td>83.1</td> <td>7.2</td> <td>23.7</td> <td>42.9</td> <td>2.4</td> </tr> <tr> <td>DDH66</td> <td>87.9</td> <td>2.4</td> <td>69.9</td> <td>114.4</td> <td>2.2</td> </tr> </tbody> </table> | Hole_id | From (m) | Interval (m) | Au (g/t) | Ag (g/t) | Zn (%) | AG16 | 38.6 | 1.2 | 0.1 | 28.6 | 1.7 | MG10 | 108.0 | 3.0 | 1.3 | No assay | No assay | DDH36 | 24.7 | 9.3 | 1.6 | 46.3 | 1.2 | DDH53 | 17.3 | 1.4 | 1.0 | 1.7 | 0.00 | DDH53 | 24.0 | 8.9 | 3.7 | 239.5 | 0.03 | DDH53 | 35.7 | 3.9 | 3.9 | 87.8 | 0.06 | DDH53 | 41.0 | 3.0 | 2.6 | 7.6 | 0.20 | DDH54 | 20.0 | 1.1 | 1.2 | 0.7 | 0.00 | DDH54 | 31.1 | 8.3 | 3.9 | 32.1 | 0.80 | DDH65 | 62.0 | 8.2 | 11.0 | 60.6 | 1.2 | DDH65 | 82.0 | 1.0 | 1.8 | 33.4 | 0.30 | DDH66 | 83.1 | 7.2 | 23.7 | 42.9 | 2.4 | DDH66 | 87.9 | 2.4 | 69.9 | 114.4 | 2.2 |

| | | (1) cut off 10 g/t Au equivalent |
| | | (2) cut off 0.2 g/t Au equivalent |
| | | NSI: no significant intersection |
| Data aggregation methods | <ul style="list-style-type: none"> - In reporting Exploration Results weighting averaging techniques maximum and/or minimum grade truncations (eg cutting of high grades) and cut-off grades are usually Material and should be stated. - Where aggregate intercepts incorporate short lengths of high-grade results and longer lengths of low-grade results the procedure used for such aggregation should be stated and some typical examples of such aggregations should be shown in detail. - The assumptions used for any reporting of metal equivalent values should be clearly stated. | <p>Weighted average significant intercepts are reported to a gold grade equivalent (AuEq). Results are reported to cut-off grade of a 1.0 g/t Au equivalent and 10 g/t Au equivalent allowing for up to 2m of internal dilution between samples above the cut-off grade and 0.2 g/t Au equivalent allowing up to 10m of internal dilution between samples above the cut-off grade. The following metals and metal prices have been used to report gold grade equivalent: Au US\$ 1780 / oz Ag US\$24 /oz and Zn US\$ 2800 /t.</p> <p>Metallurgical recoveries for Au, Ag and Zn have been estimated from metallurgical test work completed by SGS Metallurgical Operations in Lakefield, Ontario using a combination of gravity and flotation of a combined metallurgical sample from 5 drill holes. Using data from the test results, and for the purposes of the AuEq calculation gold recovery is estimated at 89%, silver at 84% and zinc at 79%. Accordingly, the formula used is AuEq (g/t) = Au (g/t) + [Ag (g/t) x (24/1780) x (0.84/0.89)] + [Zn (%)] x (28.00*31.1/1780) x (0.79/0.89)]. Metallurgical test work and geological and petrographic descriptions suggest all the elements included in the metal equivalents calculation have a reasonable potential of eventual economic recovery. While Cu and Pb are reported in the table above, these metals are not used in the Au equivalent calculation at this early stage of the Project.</p> <p>No top cuts have been applied to the reported grades.</p> |
| Relationship between mineralisation widths and intercept lengths | <ul style="list-style-type: none"> - These relationships are particularly important in the reporting of Exploration Results. - If the geometry of the mineralisation with respect to the drill hole angle is known its nature should be reported. - If it is not known and only the down hole lengths are reported there should be a clear statement to this effect (eg | <p>The mineralisation is moderately or steeply dipping and strikes NNE and ENE. For some drill holes, there is insufficient information to confidently establish the true width of the mineralized intersections at this stage of the exploration program.</p> <p>Apparent widths may be thicker in the case where bedding-parallel mineralisation may intersect ENE-striking cross faults and veins.</p> <p>Representative cross section interpretations have been provided with release of significant intersections to allow estimation of true widths from individual drill intercepts.</p> |

Section 3 Estimation and Reporting of Mineral Resources

(Criteria listed in the preceding section also apply to this section.)

| Criteria | JORC Code explanation | Commentary |
|----------------------------------|---|--|
| Database integrity | <ul style="list-style-type: none"> - Measures taken to ensure that data has not been corrupted by for example transcription or keying errors between its initial collection and its use for Mineral Resource estimation purposes. - Data validation procedures used. | <p>Geological logging completed by previous explorers was done on paper copies and transcribed into the drill hole database. The data was checked for errors. Checks can be made against the original logs and core photographs.</p> <p>Assay data is received in digital format. Backup copies are kept and the data is copied into the drill hole database.</p> <p>The drill hole data is backed up and is updated periodically by a Company GIS and data team.</p> |
| Site visits | <ul style="list-style-type: none"> - Comment on any site visits undertaken by the Competent Person and the outcome of those visits. - If no site visits have been undertaken indicate why this is the case. | <p>Site visits have been undertaken from 3 to 16 October 2019 15 to 30 November 2019 and 1-19 February 2020. The performance of the drilling program collection of data and sampling procedures were initiated during these visits.</p> |
| Geological interpretation | <ul style="list-style-type: none"> - Confidence in (or conversely the uncertainty of) the geological interpretation of the mineral deposit. - Nature of the data used and of any assumptions made. - The effect if any of alternative interpretations on Mineral Resource estimation. - The use of geology in guiding and controlling Mineral Resource estimation. - The factors affecting continuity both of grade and geology. | <p>The interpretation is considered appropriate given the stage of the project and the nature of activities that have been conducted. The interpretation captures the essential geometry of the mineralised structure and lithologies with drill data supporting the findings from the initial underground sampling activities.</p> <p>The most recent resource calculation (2006 and 2003 – La Mancha) used all core drilling at the time and detailed underground channel sampling collected by EPROM CMEC and La Mancha. Overlying assumptions included a reduction of the calculated grade in each resource block by a factor of 10% to account for possible errors in the analyses and samples. An arbitrary reduction factor was applied to the 2006 resource whereby the net reported tonnage was reduced by 25% for indicated resource blocks 50% for inferred resource blocks and 75% of potential mineral resource blocks. The reason for the application of these tonnage reduction factors was not outlined in the resource report. It is noted that at the time of this report La Mancha was in a legal dispute concerning the project with its joint venture partner and given the acquisition of a 200000 Oz per annum producing portfolio the project was likely no longer a core asset for La Mancha at that time. Additionally, under the original acquisition agreement La Mancha had to issue additional acquisition shares based on resource targets.</p> <p>The effect of removing the assumptions relating to application of the arbitrary tonnage reduction factors applied increases the overall resource tonnage by in excess of 50%. Removing these correction factors would bring the overall tonnage and grade close the earlier (2003 1999 and 1996) tonnage and grade estimates albeit in different categories (lower confidence) which are considered more appropriate.</p> <p>The mineralisation is defined to the skarn and vein bodies detailed cross section and plan maps were prepared for these bodies with their shapes used in controlling the resource estimate.</p> |

| Criteria | JORC Code explanation | Commentary |
|--|--|---|
| | | The structure of the area is complex and a detailed structural interpretation is recommended as this may provide a better understanding of the continuity of mineralisation and possible extensions to it. The deposit contains bonanza gold values and while very limited twinning has indicated acceptable repeatability a rigorous study of grade continuity needs to be undertaken as part of future resource calculations. |
| Dimensions | <ul style="list-style-type: none"> - <i>The extent and variability of the Mineral Resource expressed as length (along strike or otherwise) plan width and depth below surface to the upper and lower limits of the Mineral Resource.</i> | For the historic resource no reliable information has been provided to the owner however through further ongoing investigation is being conducted by the owner to address this information gap. |
| Estimation and modelling techniques | <ul style="list-style-type: none"> - <i>The nature and appropriateness of the estimation technique(s) applied and key assumptions including treatment of extreme grade values domaining interpolation parameters and maximum distance of extrapolation from data points. If a computer assisted estimation method was chosen include a description of computer software and parameters used.</i> - <i>The availability of check estimates previous estimates and/or mine production records and whether the Mineral Resource estimate takes appropriate account of such data.</i> - <i>The assumptions made regarding recovery of by-products.</i> - <i>Estimation of deleterious elements or other non-grade variables of economic significance (eg sulphur for acid mine drainage characterisation).</i> - <i>In the case of block model interpolation the block size in relation to the average sample spacing and the search employed.</i> - <i>Any assumptions behind modelling of selective mining units.</i> - <i>Any assumptions about correlation between variables.</i> | <p>The historic resource estimation techniques are considered appropriate. The 2003 and 2006 resources used a longitudinal section polygonal method was used for estimating resources with individual blocs representing weighted averages of sampled underground and/or areas of diamond drill pierce points with zones of influence halfway to adjacent holes. The area of the block was calculated in AutoCad directly from the longitudinal sections.</p> <p>Check assaying by PG Consulting returned values in the check assay sample which were 3.4% and 13% greater for Au and Ag than the original assays. A number pf previous resource estimates were available to check the 2006 resource estimate when the arbitrary tonnage reduction factors are removed brings the overall tonnage and grade close the earlier (2003 1999 and 1996) tonnage and grade estimates albeit indifferent categories which are considered more appropriate.</p> <p>It was assumed only gold silver and zinc would be recovered and that no other by products would be recovered. This is viewed as conservative given metallurgical data pointing to the production of a saleable zinc concentrate.</p> <p>Based on the preliminary metallurgy estimation of deleterious elements or other non-grade variables of economic significance was not required.</p> <p>The minimum mining width of 0.8m was assumed for veins less than 0.6m and for wider widths a dilution of 0.2m was used to calculate the grade.</p> <p>No assumptions were made regarding correlation between variables.</p> <p>The mineralisation is defined within skarn and associated vein deposits. Detailed cross section and plan maps were prepared for these domains with their shapes used in controlling the resource estimate. Long sections of the veins and skarn were taken and sampling was plotted and the blocks outlined considering this.</p> |

| Criteria | JORC Code explanation | Commentary |
|----------|--|---|
| | <p><i>this is the case this should be reported with an explanation of the basis of the metallurgical assumptions made.</i></p> | <ul style="list-style-type: none"> - Knelson concentrate tests with floatation of tailings were also completed. Applying a joint process Knelson concentrator and floatation of the tailings of the concentrator it is found that the global recovery is approximately 80% for gold. - While the testwork was focused predominantly on gold recovery some rougher flotation testwork was undertaken targeting Zn recovery producing up to 85% recoveries. In sulphide samples this produced a Zn concentrate containing 42% Zn with grades in excess of 50% Zn in concentrate expected with additional floatation stages. - The report concluded that it was possible to produce a commercial Au-Ag concentrate and a Zn concentrate. - Extraction of gold and silver by cyanidation was tested on 3/8 and ¼ inch (9.525mm and 19.05mm) crush sizes that are designed to test a heap leach processing scenario. Bottle roll of these crush size resulted in 41-39% gold recovery and 31-32% silver recovery with high cyanide consumption. No tests have been done on material at a finer grind size. <p>More recently, CEL has completed initial metallurgical test work on a 147 kg composite sample of mineralised limestone drill core from GMDD039, GMDD040, GMDD041, GNDD043, GNDD003 and GNDD018 and a 55 kg composite sample of mineralised intrusion (dacite) drill core from GNDD113, GNDD113A, GNDD155 and GNDD157. The of skarn mineralisation in limestone that has a weighted average grade of 10.4 g/t Au, 31.7 g/t Ag, 3.2 % Zn, 0.15 % Cu and 0.46 % Pb. The sample of mineralised dacite has a weighted average grade of 1.1 g/t Au, 7.0 g/t Ag and 0.1 % Zn. Separate tests on 2 kg sub-samples were done with differing grinding times, Knelson and Mosley table gravity separation techniques and floatation techniques to provide a series of gravity and floatation concentrates. Key results are:</p> <ul style="list-style-type: none"> - Combined gravity and floatation concentration process resulted in recoveries 85-95% for Au, 82-87% for silver, and 77-80% for zinc. Cu had similar recoveries to Ag and Pb had similar recoveries to Zn. - A simple gravity separation followed by a sulfide floatation process when re-combined produced a single product with a median grade of 47 g/t Au, 120 g/t Ag and 13% Zn with a recovered weight of 24-33% of the sample weight. - Tailings fragment analysis indicates a grind of (p_{80}) 72-106 μm. Generally, a coarser grind resulted in a higher % weight recovered to the concentrate with a corresponding lower grade without significantly impacting recovery. - QEMSCAN analysis of the sample indicates much of the Zn not recovered is due to the presence of Zn oxide (franklinite) and silicates (hemimorphite). - Sulphides present are dominated by pyrite and sphalerite. Also present are chalcopyrite, pyrrhotite, chalcocite, bornite and galena. - Further test work is planned. |

| Criteria | JORC Code explanation | Commentary |
|---|---|---|
| Environmental factors or assumptions | <ul style="list-style-type: none"> - Assumptions made regarding possible waste and process residue disposal options. It is always necessary as part of the process of determining reasonable prospects for eventual economic extraction to consider the potential environmental impacts of the mining and processing operation. While at this stage the determination of potential environmental impacts particularly for a greenfields project may not always be well advanced the status of early consideration of these potential environmental impacts should be reported. Where these aspects have not been considered this should be reported with an explanation of the environmental assumptions made. | <p>It is considered that there are no significant environmental factors which would prevent the eventual extraction of gold from the project. Environmental surveys and assessments will form a part of future pre-feasibility.</p> |
| Bulk density | <ul style="list-style-type: none"> - Whether assumed or determined. If assumed the basis for the assumptions. If determined the method used whether wet or dry the frequency of the measurements the nature size and representativeness of the samples. - The bulk density for bulk material must have been measured by methods that adequately account for void spaces (vugs porosity etc) moisture and differences between rock and alteration zones within the deposit. - Discuss assumptions for bulk density estimates used in the evaluation process of the different materials. | <p>Densities of 2.7 t/m³ were used for mineralised veins and 2.6 t/m³ for wall rock.</p> <p>No data of how densities were determined is available.</p> <p>The bulk densities used in the evaluation process are viewed as appropriate at this stage of the Project.</p> <p>CEL is collecting specific gravity measurements from drill core, which it is expected will be able to be used to estimate the block and bulk densities in future resource estimates.</p> <p>For RC drilling, the weights of material recovered from the drill hole is able to be used as a measure of the bulk density.</p> |
| Classification | <ul style="list-style-type: none"> - The basis for the classification of the Mineral Resources into varying confidence categories. - Whether appropriate account has been taken of all relevant factors (ie relative confidence in tonnage/grade estimations reliability of input data confidence in continuity of geology and metal values quality quantity and distribution of the data). | <p>The Mineral Resource Estimate has both Indicated and Inferred Mineral Resource classifications under the National Instrument 43-101 code and is considered foreign. These classifications are considered appropriate given the confidence that can be gained from the existing data and results from drilling.</p> <p>The reliability of input data for the 2003 and 2006 resources is acceptable as is the confidence in continuity of geology and metal values quality quantity and distribution of the data. Appropriate account has been taken of all relevant factors with the exception of studies into the appropriateness of the application of a top cut.</p> |

| Audits or reviews | - <i>The results of any audits or reviews of Mineral Resource estimates.</i> | <p>The historic resource estimate has not been audited.</p> <p>The earlier (1996 and 2000) Mineral Resource Estimates were audited and re-stated in a 2003 resource report. This independent report was done to NI-43-101 standard and the results of this report were released to the TSX. This report concluded that "Detailed resource calculations made by three different groups are seen to be realistic.</p> | | | | |
| Discussion of relative accuracy/confidence | <ul style="list-style-type: none"> - <i>Where appropriate a statement of the relative accuracy and confidence level in the Mineral Resource estimate using an approach or procedure deemed appropriate by the Competent Person. For example the application of statistical or geostatistical procedures to quantify the relative accuracy of the resource within stated confidence limits or if such an approach is not deemed appropriate a qualitative discussion of the factors that could affect the relative accuracy and confidence of the estimate.</i> - <i>The statement should specify whether it relates to global or local estimates and if local state the relevant tonnages which should be relevant to technical and economic evaluation. Documentation should include assumptions made and the procedures used.</i> - <i>These statements of relative accuracy and confidence of the estimate should be compared with production data where available.</i> | <p>There is sufficient confidence in the data quality drilling methods and analytical results that they can be relied upon. The available geology and assay data correlate well. The approach or procedure are deemed appropriate given the confidence limits. The main two factors which could affect relative accuracy is grade continuity and top cut.</p> <p>Grade continuity is variable in nature in this style of deposit and has not been demonstrated to date and closer spaced drilling is required to improve the understanding of the grade continuity in both strike and dip directions. It is noted that the results from the twinning of three holes by La Mancha are encouraging in terms of grade repeatability.</p> <p>The deposit contains very high grades and there is a potential need for the use of a top cut. It is noted that an arbitrary grade reduction factor of 10% has already been applied to the resource as reported.</p> <p>No production data is available for comparison</p> | | | | |
