

# **Boss appoints key EPC contractor for re-start of Honeymoon uranium project**

***Plus, front-end engineering work scheduled for completion in March quarter, 2022 ahead of Final Investment Decision***

Boss Energy Limited (ASX: BOE; OTCQB: BQSSF) is pleased to advise that it has taken another key step in its strategy to re-start production at its mothballed Honeymoon uranium project in South Australia with the appointment of the EPC contractor for the electrical, instrumentation and control system.

The contract was awarded to Process E&I Pty Ltd, which will provide end-to-end design and implementation in these three key areas.

With global experience in delivering quality engineering solutions, Process E&I Pty Ltd will lead the instrumentation controls and electrical engineering and provide back-office EPC services such as Owners' Team integration, data management and document control.

Process E&I will also meet Honeymoon's commissioning requirements, both in systems and personnel. This includes equipment tendering, procurement and evaluation services.

Boss is also pleased to announce that it has made the following personnel appointments as part of the front-end engineering and design (FEED) process:

- Power infrastructure engineer;
- Structural and tankage design engineer;
- In-house structural, mechanical and piping designer;
- In-house pump and piping engineer.

These appointments will assist in finalising key aspects of the design and final equipment selection leading into a Final Investment Decision (FID).

Boss Chief Executive Officer Duncan Craib said the company was advancing multiple work streams in parallel to minimise the lead time between FID and the start of production.

"We are making project preparations on several fronts to ensure we can capitalise on the rapidly turning uranium market at the moment of our choosing," Mr Craib said.

"We are already the most advanced of all the non-producing Australian uranium projects, with a production plant and key infrastructure in place.
