Pursuit Minerals Limited (ASX: PUR) ("Pursuit" or the "Company") is pleased to advise that the diamond drilling program has recommenced at Phil's Hill on Friday 17th September 2021.

- Drilling commenced with the re-drill of Plate 10a. The current depth of the hole is 55m
- As announced 13/9/21 the downhole Electromagnetic (DHEM) results identified a conductor ~16m to the north of the existing hole (21WDD0002). Results from the original hole show a very strong conductor (>5,000 s/m) at 142m. The existing hole drilled over the top of it, missing it by 10m

Pursuit Managing Director, Mark Freeman, said:

"We are very pleased that the Rig has returned to site and the hole is drilling ahead at 55m. We look forward to keeping the market updated with our results. Following the drilling of plate 10a we will be moving back to redrill plate 20a."
