

AHI Progressing Nexus-Vita Application Development

Highlights

- **Nexus-Vita, integration has commenced, and development deposits paid.**
- **Nexus-Vita will pay AHI USD\$500,000 to build the CompleteScan integration.**
- **CompleteScan Technology integration underway.**
- **Initial delays have been overcome.**

Advanced Human Imaging Limited (ASX: AHI) (AHI or the Company) would like to update shareholders with the Company's progress with Nexus Vita Pte Ltd (NV), a Singapore based Health monitoring and management technology company. AHI has commenced the application development for the full integration of the CompleteScan Face and Body Scan capabilities into the Nexus-Vita application.

As previously outlined, Nexus-Vita had been plagued over the last 6 months with rolling lockdowns in both Japan and Singapore, causing an endless number of delays and loss of development staff, whilst trying to complete the acquisition and development of the NV application. NV agreed to pay AHI a fixed amount of USD\$500,000 for the completion of the integration to be performed by the AHI development team, ending the delays and extension sought throughout the last 6 months. AHI has received an initial payment of USD\$50,000 and a second payment will be made in early October as the application development continues.

NV had completed the initial medical health monitoring, prevention, and engagement platform, which was ready to have the CompleteScan integrated in readiness for release to the customers of NV. After the initial requirements of the integration were assessed by the AHI team, it was decided to reconfigure the current NV application to be native iOS and Android. The AHI team identified a number of potential issues NV would face with load and concurrency issues should the application not conform with the best practice requirements AHI maintains in all of its application.

NV and AHI will collaborate on this final step to integrate the CompleteScan platform into all of the NV verticals, commencing with an initial integration into Nexus-Vita's pre-emptive health platform using FaceScan and BodyScan.

Vlado Bosanac, Chairman and Chief Executive Officer of AHI, said:

“The additional time we will take to deliver the best practice application to Nexus-Vita is required. Delays are always unfortunate but sometimes necessary to maintain the best outcome for the partnership.

Nexus-Vita is a guaranteed revenue agreement for AHI, and this is again a reason to defend the delay and be sure the experience the users will be paying for is robust and problem free. Having our experienced team driving the build will deliver this and the outcome will meet the partnership objective and more importantly a smooth, engaging and information driven user experience.

The agreement between AHI and Nexus-Vita will see AHI receive guaranteed revenues of over USD\$4m including the cost of integration. This agreement allows access for 200,000 users a month and at a fixed price for usage.

The intention of the parties is to attract a far greater audience across the Nexus-Vita partners, and this first release and experience is integral to attracting greater engagement and usage”.

Jeff Marquass Chief Executive Officer of Nexus-Vita said:

“I appreciate the additional effort the AHI team has gone to for Nexus-Vita, we are a consumer health company and not a technology development house. Having AHI, address the issues and give Nexus-Vita their knowledge and guidance on the best approach is an integral part of our desire to bring a quality application to our community.

Delays are never ideal, although on occasions necessary in providing a better long-term outcome. On a more positive note, Nexus-Vita has progressed further client agreements, and is opening a satellite office in Abu Dhabi to facilitate its new customers needs in the Middle East and Europe.

About Nexus-Vita

At its core, Nexus-Vita is a centralized intervention, medical and health data centre. Nexus-Vita’s mission is to improve the health and life expectancy of people at a population level through better knowledge, understandable data, risk identification, intervention, and treatment.

The platform empowers its users, clinicians, care teams, patients, and caregivers by having convenient, secure access to comprehensive health information (health records, claims, cost, and data from medical devices).

Our technology can aid in preventing disease, identifying the need to adjust medications, and delivering interventions. Continuous monitoring can lead health care organizations to personalized therapies that address unmet medical needs prior to an event, by simply understanding the user along their journey and not at a single point in time.

Nexus-Vita will bridge the gap between the user, health, insurance, and medical industries to give clinicians, care teams, patients, and caregivers better data, processed to help their specific needs in a mass-market on an individualized basis.

For everyday users and patients that means a digital platform aggregating all of their important health and medical data. For the medical and care industry, it means better data management. All of their client data is stored, processed, and made accessible to them. This will mean less data handling for them and better care for their clients.

*This announcement has been approved by the board of AHI Limited.

About Advanced Human Imaging:

AHI has developed and patented a proprietary dimensioning technology that enables its users to check, track, and assess their health and associated dimensions using only a smartphone both privately and accurately.

Our goal is to assist our B2B partners by providing them with our easy to implement SDK’s to then empowering their consumers with these unique and diverse capability. This in return gives our partners the ability to assess, assist, and communicate outcomes with their consumers when navigating day to day life.

Whether this is a personal journey to better health, understanding the risk associated with their physical condition, tracking the changes they are experiencing through training, dieting, or under medical regimes, or simply wanting to be correctly sized for a garment when shopping online. The AHI technology delivers this seamlessly, privately, and cost-effectively in only minutes.

Our partners benefit from our (MAAS) Measurements as a service pricing solution, that reduces with scale. Integration is made easy with the AHI modular system, based on multiple (SDK's) software development kits, allowing a partner to select the functions, measurements, and displays to suit their individual needs.

AHI has developed this capability by leveraging the power of Computer Vision, Machine Learning, and proprietary patented algorithms, that process captured images on secure, enterprise-level infrastructure, delivering an end-to-end experience that is unrivalled in the industry. AHI simplifies the collection of measurements and removes the human error present in traditional methods.
