

## More High-Grade Gold at Ternera

**7.15m @ 4.85g/t Au; contained within 30.00m @ 2.57g/t Au; and  
9.30m @ 8.79g/t Au; contained within 18.50m @ 4.55g/t Au**

- Tesoro receives assay results for 9 diamond drill holes from the Ternera Gold Deposit as part of a 60,000 metre extensional and infill drilling program.
- All holes intercepted gold mineralisation, confirming continuity of high-grade gold zones associated with north-south fault zones
- Intercepts include:
  - ZDDH0191: **52.00m @ 1.61g/t Au** from 353.00m including;
    - **30.00m @ 2.57g/t Au** from 353.00m; and
    - **7.15m @ 4.85g/t Au** from 375.85m.
  - ZDDH0192: **85.58m @ 0.82g/t Au** from 305.42m including;
    - **13.00m @ 2.20g/t Au** from 339.00m; and
    - **26.20m @ 1.17g/t Au** from 365.80m.
  - ZDDH0193: **7.00m @ 1.3g/t Au** from 7.00m; and
    - **1.00m @ 15.95g/t Au** from 156.00m.
  - ZDDH0195: **57.50m @ 0.82g/t Au** from 267.50m including;
    - **11.10m @ 1.40g/t Au** from 287.90m; and
    - **12.00m @ 2.21g/t Au** from 313.00m.
  - ZDDH0197: **18.50m @ 4.55g/t Au** from 138.50m including;
    - **9.30m @ 8.79g/t Au** from 138.50m.
- Results continue to define continuity of higher-grade gold mineralisation within north-south trending fault zones.
- Drilling continues at El Zorro with rigs drilling at Ternera, Drone Hill and Toro Blanco.
- Tesoro aims to complete an additional 15,000m drilling, with results for inclusion in the **Ternera Mineral Resource update expected Q4 CY2021**.
- Assays remain outstanding for 44 diamond drill holes and drilling continues.

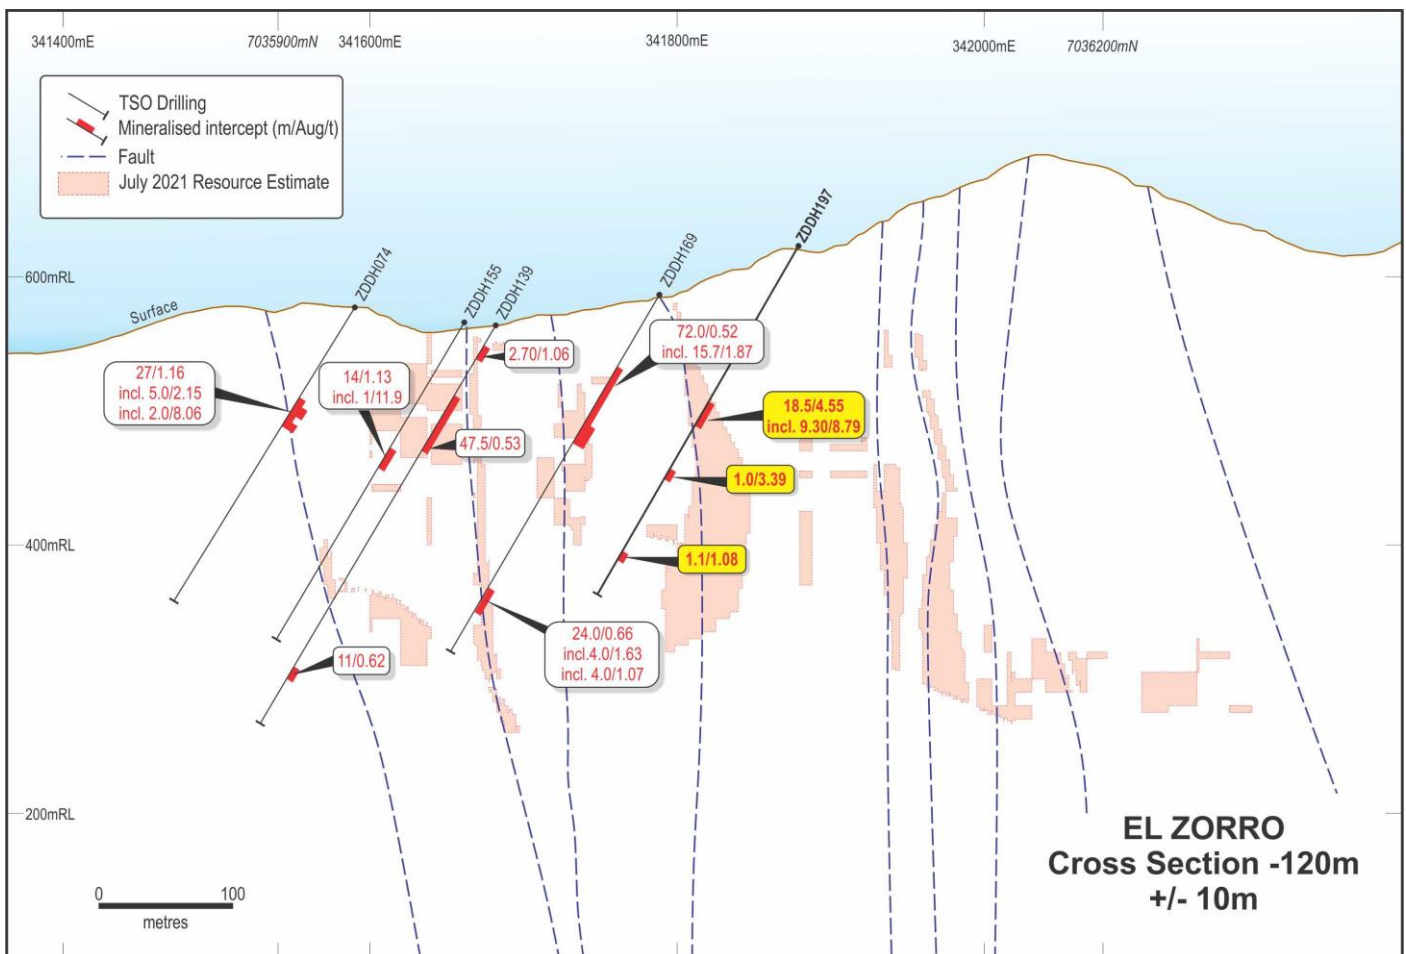

**Tesoro Resources Limited (Tesoro or the Company)** (ASX:TSO) is pleased to announce latest assay results from drilling at the Ternera Gold Deposit, located at the Company's El Zorro Gold Project (**El Zorro**) in Chile, where it is aiming to increase the existing Ternera Mineral Resource of 660,000oz gold (ASX announcement 28 July 2021).

Tesoro received assays for 9 diamond drill holes completed as part of the Ternera infill drilling program. All holes intercepted gold mineralisation, with wide gold zones intercepted increasing continuity and extent of higher-grade gold zones associated with north-south fault zones. See Table

1 for results.

**Tesoro Managing Director Zeff Reeves commented:**

“Ternera continues to deliver strong results with each drillhole adding to our confidence at Ternera. These results demonstrate that the high-grade gold zones associated with north-south faults are predictable and continuous. Four of these fault zones have been well drilled and each is over 700m long and mineralised from surface to over 300m depth. Drilling continues at Ternera East, Drone Hill and Toro Blanco, we look forward to receiving results from these holes in the coming weeks.”

**Figure 1: Ternera Drill Section -120m looking northwest. Hole ZDDH0197 confirming up dip continuity of high-grade gold mineralisation.**

**DRILLING RESULTS**

Tesoro drilled holes ZDDH0190 and ZDDH0193 on section +160m in the northern sector of the Ternera Deposit. Both holes returned shallow mineralised intercepts within sedimentary rocks affected by north-south fault zones demonstrating the continuity of gold mineralisation outside of the main El Zorro Tonalite (EZT) into sediments.

Hole ZDDH0192, ZDDH0195 and ZDDH0197 returned strong zones of mineralisation associated with the M350 fault within EZT. These results demonstrate the continuity of gold mineralisation along the M350 from surface to over 300m depth. ZDDH0198 returned a narrow, shallow intercept associated with the MF350 outside of the main EZT within sedimentary rocks.

ZDDH0191 reported a wide zone of gold mineralisation with high-grade core associated with the

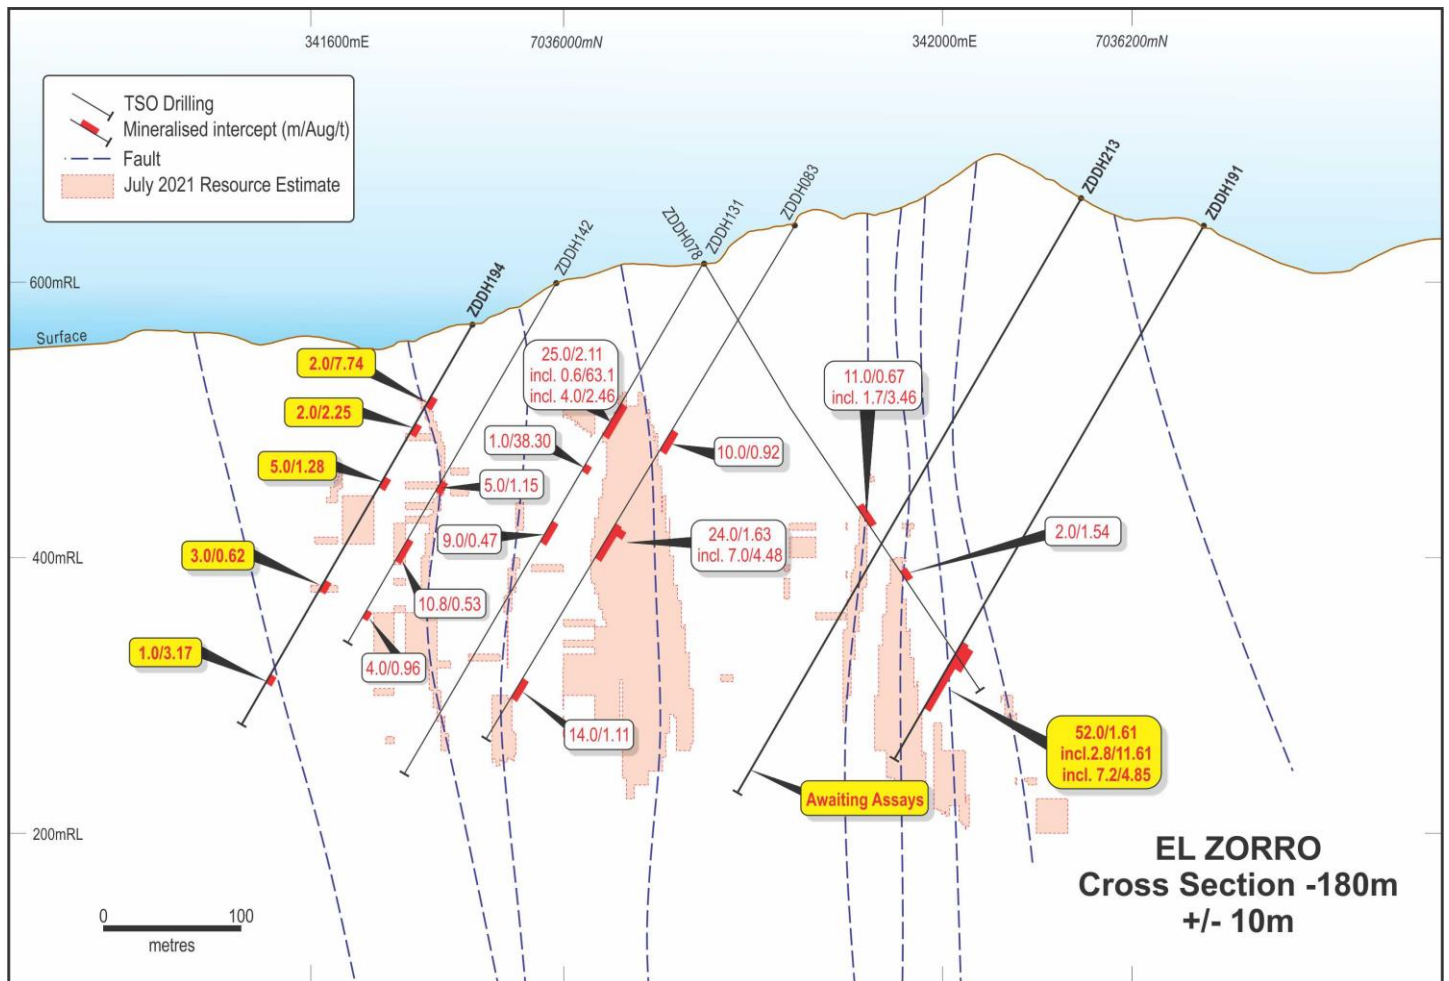

MF500 fault zone which remains open in all directions.

Holes ZDDH0194 and ZDDH0196 returned multiple narrow intercepts associated with fault splays adjacent to the MF100 fault in the western sector of Tenera.

**NEXT STEPS**

Drilling continues at El Zorro focussing on infill and extensional areas at Tenera, along with drilling at additional targets Tenera East, Drone Hill and Toro Blanco. Tesoro is currently awaiting results from 44 diamond drill holes previously completed as part of this program and will report these results as they become available.

All additional drilling results will be used to update the existing Mineral Resource estimate for the Tenera Deposit, targeted for Q4 2021.

**Figure 2: Tenera Drill Section -180m looking northwest. Hole ZDDH0191 returned high grade mineralisation associated with the MF500 fault outside of the existing Mineral Resource model.**

## About Tesoro

Tesoro Resources Limited was established with a strategy of acquiring, exploring, and developing mining projects in the Coastal Cordillera region of Chile. The Coastal Cordillera region is host to multiple world class copper and gold mines, has well established infrastructure, service providers and an experienced mining workforce. Large areas of the Coastal Cordillera remain unexplored due to the unconsolidated nature of mining concession ownership, but Tesoro, via its in-country network and experience has been able secure rights to a district scale gold project in-line with the Company's strategy. Tesoro's 95% owned Chilean subsidiary owns 85% of the El Zorro Gold Project.

## Competent Persons Statement

The information in this report that relates to Exploration Results is based on information compiled by Mr Zeffron Reeves (B App Sc (Hons) Applied Geology) MBA, MAIG). Mr Reeves is a member of the Australian Institute of Geoscientists and a Director and shareholder of the Company. Mr Reeves has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Reeves consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.

The information in this report that relates to Mineral Resources is based on information compiled by Mr Daniel Saunders, a Competent Person who is a Member of The Australasian Institute of Mining and Metallurgy. Mr Saunders is a full-time employee of Cube Consulting Pty Ltd, acting as independent consultants to Tesoro Resources Limited. Mr Saunders has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration, and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. The Company confirms that it is not aware of any new information or data that materially affects the Mineral Resource information included in the original announcement on 28 July 2021 and all material assumptions and technical parameters underpinning the estimates in the original announcement continue to apply and have not materially changed. The Company confirms that the form and context in which the applicable Competent Persons' findings are presented have not been materially modified from the original announcement.

## Future Performance

This announcement may contain certain forward-looking statements and opinion. Forward-looking statements, including projections, forecasts and estimates, are provided as a general guide only and should not be relied on as an indication or guarantee of future performance and involve known and unknown risks, uncertainties, assumptions, contingencies and other important factors, many of which are outside the control of the Company and which are subject to change without notice and could cause the actual results, performance or achievements of the Company to be materially different from the future results, performance or achievements expressed or implied by such statements. Past performance is not necessarily a guide to future performance and no representation or warranty is made as to the likelihood of achievement or reasonableness of any forward-looking statements or other forecast. Nothing contained in this announcement, nor any information made available to you is, or and shall be relied upon as, a promise, representation, warranty or guarantee as to the past, present or the future performance of Tesoro.

**Drillhole details for holes completed at El Zorro by Tesoro since February 2020. Co-ordinate system is PSAD56-19S.**

## APPENDIX 3 – JORC TABLES

### JORC Table 1

#### Section 1: Sampling Techniques and Data

| Criteria                                      | JORC Code explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Commentary                                                                                                                                                                                                                                                                                                                                                                             |
|-----------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sampling techniques                           | <ul style="list-style-type: none"> <li>Nature and quality of sampling (e.g. cut channels, random chips, or specific specialised industry standard measurement tools appropriate to the minerals under investigation, such as downhole gamma sondes, or handheld XRF instruments, etc.). These examples should not be taken as limiting the broad meaning of sampling.</li> </ul>                                                                                                                                                                                                                                            | <p>Tesoro has completed 242 diamond drill holes for 76,736m in 2017, 2018, 2020 and 2021 (ZDDH0001 to ZDDH00241). Diamond drill holes were drilled with HQ. Sampling was half core at geologically defined and significant mineralisation boundaries.</p> <p>Tesoro considers the sampling methodologies to be appropriate for this style of mineralisation.</p>                       |
|                                               | <ul style="list-style-type: none"> <li>Include reference to measures taken to ensure sample representivity and the appropriate calibration of any measurement tools or systems used.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>Tesoro Diamond drill holes were drilled with HQ. Sampling was half core at geological and significant mineralisation boundaries. Tesoro consider this appropriate for the style of mineralisation.</p>                                                                                                                                                                              |
|                                               | <ul style="list-style-type: none"> <li>Aspects of the determination of mineralisation that are Material to the Public Report. In cases where 'industry standard' work has been done, this would be relatively simple (e.g. 'reverse circulation drilling was used to obtain 1 m samples from which 3 kg was pulverised to produce a 30 g charge for fire assay'). In other cases, more explanation may be required, such as where there is coarse gold that has inherent sampling problems. Unusual commodities or mineralisation types (e.g. submarine nodules) may warrant disclosure of detailed information.</li> </ul> | <p>Diamond drilling was used to obtain ½ core samples of various lengths (minimum 0.25m), from which 1kg of material was pulverised passing 200 mesh to produce a 50g charge for fire assay fusion with a gravimetric finish. Multielement assays were completed by 4-acid digest with a 2.5g charge. Tesoro consider these appropriate assay techniques.</p>                          |
| Drilling techniques                           | <ul style="list-style-type: none"> <li>Drill type (e.g. core, reverse circulation, open-hole hammer, rotary air blast, auger, Bangka, sonic, etc.) and details (e.g. core diameter, triple or standard tube, depth of diamond tails, face-sampling bit or other type, whether core is oriented and if so, by what method, etc.).</li> </ul>                                                                                                                                                                                                                                                                                 | <p>Tesoro has completed 242 diamond drill holes for 76,736m . Diamond drill holes were drilled with HQ. Sampling was half core at geological and significant mineralisation boundaries. Standard tube was used.</p>                                                                                                                                                                    |
| Drill sample recovery                         | <ul style="list-style-type: none"> <li>Method of recording and assessing core and chip sample recoveries and results assessed.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>Core recovery was estimated using the drillers recorded depth marks against the length of the core recovered. Reviewing the core photos, there are occasional shears/faults where core is broken. There is however no significant core loss.</p>                                                                                                                                    |
|                                               | <ul style="list-style-type: none"> <li>Measures taken to maximise sample recovery and ensure representative nature of the samples.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>A single tube system was employed and in general core recovery good.</p>                                                                                                                                                                                                                                                                                                            |
