

Drilling Commences at Brandy Hill South

Key Highlights

- Drilling of the Brandy Hill South Project commenced on the 27th of October
- The drilling program consists of 21 RC holes totalling approximately 4,000m
- Significant historical drilling intersections at Brandy Hill South include:
 - 75m @ 0.55% Cu, finishing in mineralisation, including 23m @ 1.29% Cu and 3.4 g/t Ag and 300 ppm W, within a highly altered dolerite with quartz veining and abundant sulphides of massive pyrite and microcrystalline chalcopyrite stringers
 - o 12m @ 1.10% Cu and 14.9 g/t Ag, 0.22 g/t Au; including intersection of a zone of strong Au-Cu-Ag-Pt-Pd mineralisation including 1m @ 2.15g/t Au, 112g/t Ag and 2.10% Cu
 - 16m @ 0.48% Cu, including 3m @ 1.47% Cu, 8.7 g/t Ag and 445 ppm W

Recharge Metals Limited (ASX: REC, Recharge or the **Company**) is pleased to announce that drilling commenced at the Brandy Hill South Project on Wednesday the 27th of October.

The first phase of the program is comprised of eight (8) Reverse Circulation (RC) drillholes which have been designed to test the continuity of mineralisation, extensions along strike and to verify previous assay results to a depth of 150m. The second phase is designed to test the down-dip extent of mineralisation to 250m and is scheduled to commence in late November 2021.

The Brandy Hill South Project is located within the Archaean Gullewa Greenstone Belt in the Murchison Province of the Yilgarn Craton. The main structure within the Brandy Hill South Project is the Salt Creek Shear that trends north-south and deforms the belt on a regional scale (Figure 1). Cross-cutting northeast and northwest faults are secondary to this, with Riedal structures occurring between parallel faults.

Recharge Managing Director Brett Wallace commented:

"We are very pleased to have commenced drilling soon after listing on the ASX. RC drilling will allow Recharge to target the quartz-sulphide, vein-hosted copper-gold mineralisation in the Brandy Hill South Project"

This announcement has been authorised for release by the board.

Competent Persons Statement

The information in this announcement that relates to Exploration Results is based on information compiled and fairly represented by Mr Brett Wallace, Managing Director of Recharge Metals Ltd, who is a Member of the Australasian Institute of Mining and Metallurgy (MAusIMM). Mr Wallace has sufficient experience relevant to the style of mineralisation and type of deposit under consideration, and to the activity which he has undertaken, to qualify as a Competent Person as defined in the 2012 Edition of the Joint Ore Reserves Committee (JORC) Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves. Mr Wallace consents to the inclusion in this report of the matters based on this information in the form and context in which it appears.

Previous Disclosure

The information in this announcement is based on the Recharge Metals Limited Prospectus, which is available from the Recharge Metals Limited website www.rechargemetals.com.au and the ASX website www.asx.com.au. The Company confirms that it is not aware of any new information or data that materially affects the information included in the Prospectus and that all material assumptions and technical parameters underpinning the Prospectus continue to apply and have not materially changed. The Company confirms that the form and context in which the Competent Person's findings are represented have not been materially modified from the Prospectus.

About Recharge Metals

Recharge Metals Ltd is an Australian copper developer and explorer, focusing on Australian copper projects.

Three **100% owned** Western Australian development and exploration projects:

- Brandy Hill South Cu-Au mineralisation
- Hyden Cu-Ni-Co mineralisation
- Bohemia Cu- Pb-Zn mineralisation
