## MercyCare signs InteliCare contract to provide AI-based smart technology to help clients to live independently.

- **MercyCare invests over \$170,000 in smart home technology created by InteliCare.**
- **InteliCare's smart home technology to empower MercyCare and clients to proactively use data to customise individual care.**
- **125 MercyCare home-care clients to potentially benefit.**

InteliCare Holdings Ltd ("InteliCare" or the "Company") (ASX: ICR), an Australian Software-as-a-Service (SaaS) technology company in the aged care and health industries has developed an award-winning AI-based home monitoring solution that can enhance home care assistance to support older people to continue living independently at home. The Company is pleased to announce a contract win and initiation of services with Mercy Community Services Ltd ("MercyCare"), a leading Western Australia provider of community services including aged care and disability support services.

InteliCare has been awarded a contract to supply MercyCare with assistive living technology. MercyCare helps over 2,400 seniors live independently in their own homes.

Utilising in-home sensor technology and artificial intelligence, InteliCare's smart technology will provide MercyCare with instant access to their clients' 24/7 health and wellbeing data. Clients and their families will also be able to access the data to support them to make decisions about the care required.

MercyCare will purchase InteliCare's smart home technology, with up to 125 units available for MercyCare clients to purchase through their aged care funding or privately. There is future potential growth for InteliCare technology to be installed across more client homes in the future.

MercyCare selected InteliCare based on our richness of insights into patterns of behaviour, which is a critical element in being able to provide personalised and proactive care. Secondly, was the product's ability to scale up customised sensor configurations for each client. This assists MercyCare's staff to meet their client's changing needs based on real-world evidence, helping them stay healthy at home for longer.

The technology includes the InteliCare Pro Dashboard for carers to enable personalised services, reduced intrusion and maintain independence while monitoring their physical and mental health for early signs of deterioration.

These benefits and features align with MercyCare's 2023 Strategic Plan, including MercyCare's goal to embrace innovative practices and technologies. MercyCare also strives to create innovative models to achieve growth and stability.

**Anthony Smith, MercyCare CEO says,** *"We are excited at the opportunity to look into how technology can improve and enhance the quality of care for clients who live at home independently. While still in the early stages, we look forward to the positive outcomes this can mean for older Western Australians. We look forward to empowering our care staff with data which can be used to deliver our Person-Centred Approach by proactively customising each individual's care and support."*

**Jason Waller, CEO of IntelliCare says,** *"We are extremely pleased to be awarded this contract with MercyCare. MercyCare is a highly respected organisation that understands the importance of innovation and smart technology when seeking care solutions. This contract reflects IntelliCare making substantial traction in the aged care sector thanks to our continued investment in creating innovative and scalable solutions that empower service providers with clear and comprehensive data."*

The material terms of the contract are as follows:

- The contract is between Intelicare Holdings Ltd and Mercy Community Services Ltd.
- The contract value is forecast at over \$170,000, with further non-binding potential for ongoing recurring fees and additional hardware.
- MercyCare has committed to purchasing a minimum of 125 units, with buy back terms at the 12-month anniversary for unused systems.
- Standard termination terms apply for breach by either party with 30 days notice.
