Apollo Hill 'Greater' Gold Project

Overview, Location and Tenure

- 60km south-east of Leonora in Western Australia in world class multi million-ounce gold province close to existing gold infrastructure
- Centred around the current 944,000oz **JORC Mineral Resource** Indicated and Inferred JORC Compliant Mineral Resource of 35.9Mt @ 0.8g/t Au reported above a cut-off grade of 0.4g/t Au and reported within an optimised pit shell¹
- 100% ownership of more than 1,000km² of contiguous exploration ground
- Underexplored large-scale district gold play historically underdone due to a varied ground ownership and commodity cycles
- **Key Gold Fertile Structures** including the Keith Kilkenny Lineament
- Good Mining Infrastructure
- **Central Strategic Position in the Belt**

Apollo Hill – Resource Upgrade (944koz Au) January 2021

SATURN METALS

ASX:STN

A Significant Increase

Open For Further Expansion

- Apollo Hill Indicated and Inferred JORC Compliant Mineral Resource of 35.9 Mt @ 0.8g/t Au for 944,000oz reported above a cut-off grade of 0.4g/t Au and reported within an optimised pit shell¹
- Expansive gold mineralised system 400m 500m wide
- Published Resource constrained to maximum 250m depth
- Simple, Big, Low Strip, Large Selective Mining Unit, Lower Unit Cost, Open Pit Potential

Within Three Years of IPO in March 2018 - Saturn Metals has:

- ✓ Delivered an additional 439koz;
- ✓ Converted 21.2Mt @ 0.8g/t Au for 556koz to an Indicated Mineral Resource representing 59% of the Inferred Mineral Resource: and
- ✓ Delivered and Converted 5.4oz for every metre drilled (good discovery and conversion cost).

- 9m @ 18.2g/t Au from 301m Incl. 5m @ 32.6g/t Au from 301m - AHRC0362.
- **Drilling continues to target higher grade** plunging shoots to look for leverage to the deposits overall grade profile.

Preliminary Whittle pit optimizations using approximated regional mining and processing costs for multiple processing scenarios have been run on the resource model using a gold price of US\$1,700/oz to generate a range of pit shells and cut-off grades. A pit shell for a combined mill and heap leach scenario representing a revenue factor of 1.4 was selected as a nominal constraint within which to report the Apollo Hill Mineral Resource, thereby satisfying the JORC Code requirement for a Mineral Resource to have reasonable prospects for www.saturnmetals.com.au eventual economic extraction. Other relevant information is described in the JORC Code Table 1 as appropriate. A nominal 0.4 g/t Au lower cut-off grade was selected for all material types. Classification is according to JORC Code Mineral Resource categories. Totals may vary due to rounded figures.

Leverage

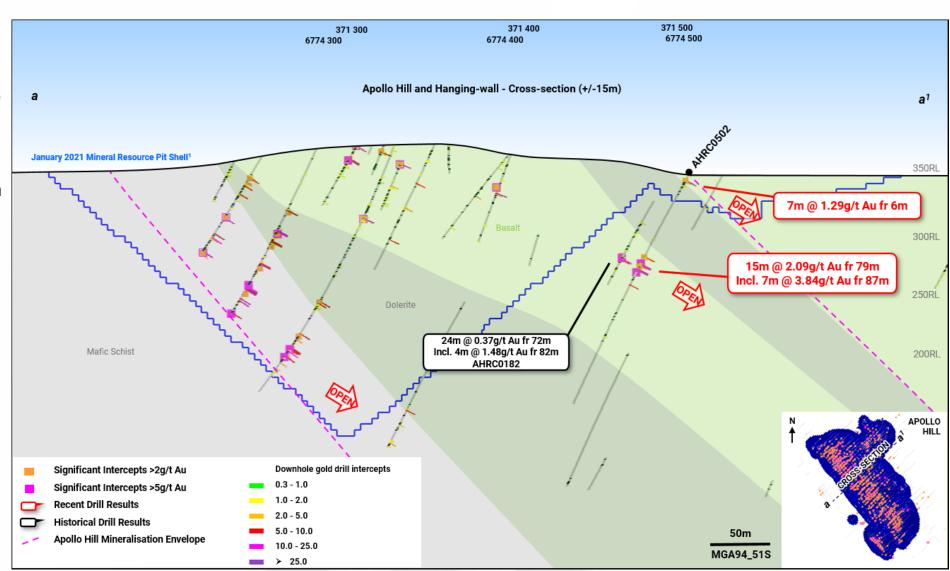

Higher Grade Results in Pivotal Positions

Working Towards the Next Resource:

Higher Grade results since the January resource upgrade have included^a:

- 12m @ 5.75g/t Au from 2m
 Incl. 8m @ 8.83g/t Au from
 6m AHRC0480
- 8m @ 4.28g/t Au from 72m
 Incl. 4m @ 8.34g/t Au from 72m AHRC0477
- 15m @ 2.09g/t Au from
 79m Incl. 7m @3.84g/t Au
 from 87m AHRC0502
- Drilling successfully targeted leverage points for possible Whittle pit expansion.

Test Work Has Shown Excellent Gold Extraction Characteristics

for Easily Recoverable Gold

Conventional Mill OptionMILL – GRAVITY AND CIL

- 96.8% gold recovery conventional (75μm_P80 grind);
- 65.9% recovery by gravity (75µm_P80 grind)
- 91.8% achieved at 250µm_p80 grind with 56% by gravity
- 80.3% achieved at 2mm_p100 crush, with 47.8% by gravity
- Good Recovery even at lower grades 97% at 0.25g/t Au 75µm_p80
- Potential for lower energy use in grinding.
- BBMWI 16 kWh/t average hardness.
- Rapid leach times 8 hours max at 75μm_P80
- Low reagent use; cyanide consumption (on average 0.33kg/t) and low lime addition (on average 0.11kg/t)

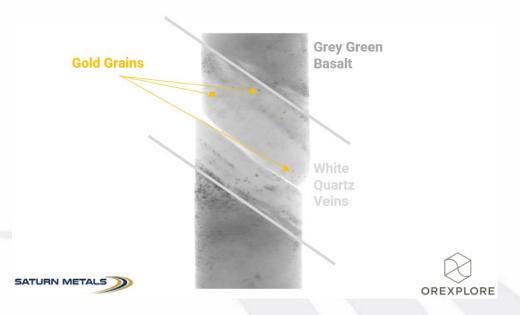

LEACHING (Heap/Vat)

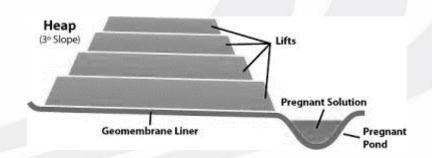

- Coarse grind size gold recovery is encouraging with high permeability and low agglomeration requirements – column test work after High Pressure Grinding Roller crushing
- Rapid Leach in Column Results Achieved in <30 Days

Grind Size	Au Recovery	Recovery after two weeks
-8mm	77%	67%
-4mm	69%	54%

The Company recommends investors obtain their own independent financial and accounting advice before making any financial investment in reliance upon information contained in this publication.

The information in this report that relates to Exploration Targets, geology, and Exploration Results and data compilation is based on information compiled by Ian Bamborough, a Competent Person who is a Member of The Australian Institute of Mining and Metallurgists. Ian Bamborough is a fulltime employee of the Company. Ian Bamborough has sufficient experience that is relevant to the style of mineralisation and type of deposit under consideration and to the activity being undertaken to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Ian Bamborough consents to the inclusion in the report of the matters based on her information in the form and context in which it appears.

The information on the Apollo Hill JORC Compliant Mineral Resource is extracted from the report entitled 'Apollo Hill Gold Resource Upgraded to 944,000oz' created on 28 January 2021 and is available to view on the Saturn Metals Limited website (www.saturnmetals.com.au - ASX Announcements). The company confirms that it is not aware of any new information or data that materially affects the information included in the original market announcement and, in the case of estimates of Mineral Resources or Ore Reserves, that all material assumptions and technical parameters underpinning the estimates in the relevant market announcement continue to apply and have not materially changed. The company confirms that the form and context in which the Competent Person's findings are presented have not been materially modified from the original market announcement.'1
