

11 January 2022

Drilling Completed on Pisces #3

Calima Energy Limited ("Calima" or the "Company") (ASX: CE1) is pleased to confirm that the Pisces #3 Glauconitic well at Brooks has reached TD and the rig has been released.

Highlights:

- Pisces #3 (100%WI), the 3rd Glauconitic well, was spudded 2 January 2022 and the rig was released 8 January 2022. The well was drilled to a measured depth of ~2,600 meters and took 7 days to drill
- Multi-stage fracturing of Pisces #3 is estimated to start early February with flow testing to follow
- Flow testing of Pisces #1 & #2 horizontal wells is expected to commence the last week of January
- Glauconitic wells are anticipated to have an EUR of 170 400 Mboe's
- IP90's of 200 400 boe/d
- Following the **multi-stage frac stimulation** programs the wells will be tied-in to existing facilities
- Capital program funded from operational cash flows and the Company's credit facility

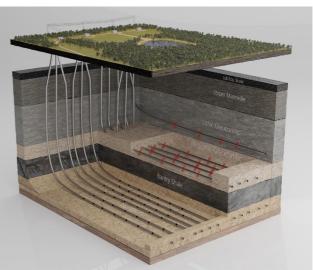

Jordan Kevol, CEO and President:

"The Company has finished drilling its 3-well Pisces Brooks Alberta program. We are very pleased with the efficiency and expediency that the Calima Operations Team executed on this program. The drill costs to date are on budget. The rig has been released from Pisces #3, and we are now preparing for the multi-stage frac of #3 in February 2022."

3 Well Pisces Oil and Gas Program

The Pisces #3 well targeted the Lithic Glauconitic with 33 frac ports in the horizontal section and is planned to be fracture stimulated in February 2022. The well is classified as a development well and has been drilled adjacent to four vertical well logs that encountered the Glauconitic channel, and in conjunction with recently acquired 3D seismic data confirming the presence of the Glauconitic zone. Oil and gas shows have been as prognosed.

Pisces #1 and #2 are development wells targeting oil accumulations in the Glauconitic horizon. The Glauconitic zone is a shallower (younger) formation compared to Calima's core Sunburst conventional target. Pisces #1 and #2 were drilled in December and their

multi-stage frac stimulations were recently completed. They are presently being tied-in to existing infrastructure and facilities and the wells currently sit in their 7 day shut-in period prior to opening frac ports and running pumping equipment.

Completion style

Each of the three Pisces wells were completed with multi-stage frac ports spaced approximately 42m apart. The Pisces #1 and #2 fracs have 10 - 15 tons of sand per stage with adjustments in tonnage allocated for variations in perceived reservoir thickness. The frac intensity will be approximately 0.2 - 0.3 tons of sand per meter of horizontal length within the portion of the wellbore that encountered the Glauconitic Formation. In comparison the Pisces #3 fracs will be 30 - 40 tons of sand per stage with final modelling underway to fine tune and optimize the economic size based on reservoir thickness and quality. The frac intensity will be approximately 0.7 - 1.0 tons of sand per meter of horizontal length within the portion of the wellbore that encountered the Glauconitic Formation. This higher intensity in Pisces #3 is a result of thicker reservoir. After each frac stage is finished pumping, the frac interval multi-cycle sliding sleeve is closed to allow the newly initiated fractures to "heal" around the frac sand proppant. This is a mitigating factor to ensure that the frac sand stays in the formation which helps minimize the need for future frac sand cleanouts, as well as increasing the effectiveness of the frac conductivity which is beneficial for production.

Flowback

After the 7-day shut-in period, the multi-cycle sliding sleeve frac ports are opened, pumping equipment installed, and the well will begin the flow back period. Since large amounts of frac fluid (~5,000 m³ for Pisces #3)) are being used, it takes ~30-45 days to recover sufficient frac fluid before the commencement of reliable oil and gas flow rates from the Glauconitic Formation.

Tie-in operations

The Pisces wells will be tied into the 2-29 Bantry oil battery. The emulsion pipeline for Pisces #1 & 2 is a short tie in as both wells were drilled off the same pad, which is proximal to the 2-29 battery facility. Pisces #3 is awaiting completion (fracture) operations, and tie-in will follow.

Bantry Oil Processing Plant 2-29

30 and 90 day initial production rates

It is anticipated that initial flowback will occur by the last week of January for the first two Pisces wells. Once the wells are flowing back frac fluid, it is anticipated that it will take 7-10 days to see any traces of hydrocarbon. Once meaningful hydrocarbons begin to appear the "IP30" period will commence. This IP30 period will continue to be a combination of both frac fluid and formation fluid (oil/gas/water). It will be in the 30-45 day period where each of the wells is anticipated to be producing at their full potential, late February or early March 2022.

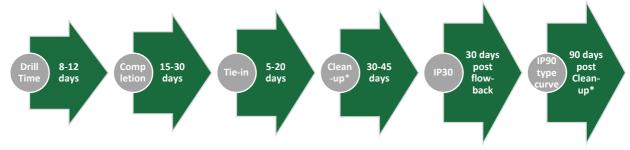

Pisces #3 is estimated to be fractured in early February with a similar timeline for flowback thereafter to the first two Pisces wells.

Typical Glauconitic drilling and production timeframes

* Clean-up is the period that water and drilling fluids are recovered from the completion and at after which time commercial hydrocarbons begin to flow from the reservoir.

This release has been approved by the Board.

Forward Looking Statements

This release may contain forward-looking statements. These statements relate to the Company's expectations, beliefs, intentions or strategies regarding the future. These statements can be identified by the use of words like "anticipate", "believe", "intend", "estimate", "expect", "may", "plan", "project", "will", "should", "seek" and similar words or expressions containing same. These forward-looking statements reflect the Company's views and assumptions with respect to future events as of the date of this release and are subject to a variety of unpredictable risks, uncertainties, and other unknowns. Actual and future results and trends could differ materially from those set forth in such statements due to various factors, many of which are beyond our ability to control or predict. These include, but are not limited to, risks or uncertainties associated with the discovery and development of oil and natural gas reserves, cash flows and liquidity, business and financial strategy, budget, projections and operating results, oil and natural gas prices, amount, nature and timing of capital expenditures, including future development costs, availability and terms of capital and general economic and business conditions. Given these uncertainties, no one should place undue reliance on any forward-looking statements attributable to Calima, or any of its affiliates or persons acting on its behalf. Although every effort has been made to ensure this release sets forth a fair and accurate view, we do not undertake any obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

Qualified petroleum reserves and resources evaluator statement

The petroleum reserves and resources information in this announcement in relation to Blackspur Oil Corp is based on, and fairly represents, information and supporting documentation in a report compiled by InSite Petroleum Consultants Ltd. (InSite) for the June 30, 2021 Reserves Report. InSite is a leading independent Canadian petroleum consulting firm registered with the Association of Professional Engineers and Geoscientists of Alberta. These reserves were subsequently reviewed by Mr. Graham Veale who is the VP Engineering with Blackspur Oil Corp. The InSite June 30, 2021 Reserves Report and the values contained therein are based on InSite's June 30, 2021 price deck (https://www.insitepc.com/pricing-forecasts). Mr. Veale holds a BSc. in Mechanical Engineers and Geoscientists of Alberta (APEGA). He has over 25 years of experience in petroleum and reservoir engineering, reserve evaluation, exploitation, corporate and business strategy, and drilling and completions. InSite and Mr. Veale have consented to the inclusion of the petroleum reserves and resources information in this announcement in the form and context in which it appears.

Term	Meaning		
Adjusted EBITDA:	Adjusted EBITDA is calculated as net income (loss) before interest and financing expenses, income taxes, depletion, depreciation and amortisation, and adjusted to exclude certain non-cash, extraordinary and non-recurring items primarily relating to bargain purchase gains, gains and losses on financial instruments, transaction and advisory costs and impairment losses. Calima utilises adjusted EBITDA as a measure of operational performance and cash flow generating capability. Adjusted EBITDA impacts the level and extent of funding for capital projects investments or returning capital to shareholders.		
Adjusted working capital:	Adjusted working capital is comprised of current assets less current liabilities on the Company's balance sheet and excludes the current portions of risk management contracts and credit facility draws. Adjusted working capital is utilised by Management and others as a measure of liquidity because a surplus of adjusted working capital will result in a future net cash inflow to the business which can be used for future funding, and a deficiency of adjusted working capital will result in a future net cash outflow which will require a future draw from Calima's existing funding capacity.		
ARO / Asset Retirement	the process of permanently closing and relinquishing a well by using cement to create plugs at specific intervals within a well bore		
Obligation:			
Available funding:	Available funding is comprised of adjusted working capital and the undrawn component of Blackspur's credit facility. The available funding measure allows Management and other users to evaluate the Company's liquidity.		
Credit Facility Interest:	Borrowings under the Credit Facility incur interest at a market-based interest rate plus an applicable margin which varies depending on Blackspur's net debt to cash flow ratio. Interest charges are between 150 bps to 350 bps on Canadian bank prime borrowings and between 275 bps and 475 bps on Canadian dollar bankers' acceptances. Any undrawn portion of the demand facility is subject to a standby fee in the range of 20 bps to 45 bps. Security for the credit facility is provided by a C\$150 million demand debenture		
CO ² e:	carbon dioxide equivalent		
Conventional Well:	a well that produces gas or oil from a conventional underground reservoir or formation, typically without the need for horizontal drilling or modern completion techniques		
Compression:	a device or facility located along a natural gas pipeline that raises the pressure of the natural gas flowing in the pipeline, which in turn compresses the natural gas, thereby both increasing the effective capacity of the pipeline and allowing the natural gas to travel longer distances		
Corporate Decline:	consolidated, average rate decline for net production from the Company's assets		
Exit Production:	Exit production is defined as the average daily volume on the last week of the period		
Operating Income:	Oil and gas sales net of royalties, transportation and operating expenses		
Financial Hedge:	a financial arrangement which allows the Company to protect against adverse commodity price movements, the gains or losses of which flow through the Company's derivative settlements on its financial statements		
Free Cash Flow (FCF):	represents Hedged Adjusted EBITDA less recurring capital expenditures, asset retirement costs and cash interest expense		
Free Cash Flow Yield:	represents free cash flow as a percentage of the Company's total market capitalisation at a certain point in time		
Funds Flow:	Funds flow is comprised of cash provided by operating activities, excluding the impact of changes in non-cash working capital. Calima utilises funds flow as a measure of operational performance and cash flow generating capability. Funds flow also impacts the level and extent of funding for investment in capital projects, returning capital to shareholders and repaying debt. By excluding changes in non-cash working capital from cash provided by operating activities, the funds flow measure provides a meaningful metric for
